The Circular Gates:

Hydraulic Gates and Valves Jack Lewin, 2001 Based on the author's extensive practical experience this new edition will act as a definitive reference work on gates and valves Hydraulic gates and valves in free surface flow and submerged outlets 2nd edition will provide you with a comprehensive overview of the subject and clearly describes the principle options available to engineers and designers and outlines the main advantages and disadvantages of all hydraulic gates and valves highlighting potential problems in their use This fully revised edition includes Information about new types of water operated automatic gates rolling weir gates fuse gates and an extended part on barrier gates and their details The sections on seals the trunnions of radial gates ice formation gate operation and structural design have all been expanded New sections on hazard and reliability of gates earthquake effects on gates and operating machinery environmental impact and aesthetics as well as maintenance An appendix on the calculation of hydrostatic loads on radial gates has been set out Hydraulic gates and valves in free surface flow and submerged outlets 2nd edition will be of great benefit to engineers who work or design project

The Fortifications of Arkadian City States in the Classical and Hellenistic Periods Matthew P. Maher, 2017-08-15 This illustrated study comprises a comprehensive and detailed account of the historical development of Greek military architecture and defensive planning specifically in Arkadia in the Classical and Hellenistic periods Employing data gathered from the published literature and collected during the field reconnaissance of every site the fortification circuit of each Arkadian polis is explored In this way the book provides an accurate chronology for the walls in question an understanding of the relationship between the fortifications and the local topography a detailed inventory of all the fortified poleis of Arkadia a regional synthesis based on this inventory and the probable historical reasons behind the patterns observed through the regional synthesis Maher argues that there is no evidence for fortified poleis in Arkadia during the Archaic period However when the poleis were eventually fortified in the Classical period the fact that most appeared in the early fourth century BC strategically distributed in limited geographic areas suggests that the larger defensive concerns of the Arkadian League were a factor Although the defensive responses to innovations in siege warfare and offensive artillery of the Arkadian fortifications follow the same general developments observable in the circuits found throughout the Greek world there does exist a number of interesting and noteworthy regionally specific patterns Such discoveries validate the methodology employed and clearly demonstrate the value of an exclusively regional focus for shedding light on a number of architectural topographical and historic issues

The Redoubtable Pali Avramapul Victoria Goddard, Before the Fall of the Empire of Astandalas the Red Company was legendary A dozen or so years after that cataclysm they have almost faded into myth Pali Avramapul may not have gone under her own name since the dissolution of the Red Company but she is no myth

and has certainly not faded She fights folly and injustice as fiercely as ever although as a respected scholar of history at one of the Circle Schools of Alinor she now tends to use her tongue and pen more than her sword She still keeps the sword sharp of course You never know when adventure will come calling She expects her sabbatical to be a decorous respectable sort of adventure the kind with which she can regale her colleagues in the Senior Common Room upon her return She s not very upset when she finds one or two of her old friends and it turns out the adventure is much more likely to involve a plot to kidnap the Last Emperor of Astandalas There s respectable after all and then there s respectable **Reversible**

Challenger During the Years 1873-1876: Porulosa (Spumellaria and Acantharia) and Subclass Osculosa Ernst Heinrich Philipp August Haeckel, 2020-09-28 The significance of the Radiolaria in regard to the relations of life in the ocean has been increased in a most unexpected manner by the discoveries of the Challenger Large swarms of these delicate Rhizopoda were found not only at the surface of the open ocean but also in its different bathymetrical zones Thousands of new species make up the wonderful Radiolarian ooze which covers large areas of the deep sea bed and was brought up from abysses of from 2000 to 4000 fathoms by the sounding machine of the Challenger They open a new world to morphological investigation When ten years ago in the autumn of 1876 I accepted the enticing invitation of Sir Wyville Thomson to undertake the investigation of these microscopic creatures I hoped to be able to accomplish the task with some degree of completeness within a period of from three to five years but the further my investigations proceeded the more immeasurable seemed the range of forms like the boundless firmament of stars I soon found myself compelled to decide between making a detailed study of a selection of special forms or giving as complete a survey as possible of the varied forms of the whole class and I decided upon the latter course having regard both to the general plan of the Challenger Reports and to the interests of our acquaintance with the class as a whole I must however confess at the close of my work that my original intention is far from having been fulfilled The extraordinary extent and varied difficulties of the undertaking must excuse the many deficiencies The special examination of the Challenger collection was for the most part completed in the summer of 1881 I collected its results in my Entwurf eines Radiolarien Systems auf Grund von Studien der Challenger Radiolarien Jenaische Zeitschr f Naturw Bd xv 1881 Since the manuscript of this preliminary communication was completed only a few days before my departure for Ceylon and since I was unable to correct the proofs myself several errors have crept into the Prodrum Systematis Radiolarium included in it These have been corrected in the following more extensive working out of it Even at that time I had distinguished 630 genera and more than 2000 species but on the revision of these which I undertook immediately on my return from India this number was considerably increased The total number of forms here described amounts to 739 genera and 4318 species of these 3508 are new as against 810 previously described In spite of this large number however and in spite of the astonishing variety of the new and marvellous forms the riches of the Challenger collection are by no means exhausted A careful and patient worker who would devote a second decade to the work would probably increase the number of new forms especially of the smaller ones by more than a thousand but for a really complete examination the lifetime of one man would not suffice The richest source of the Challenger material is the Radiolarian ooze of the central Pacific Ocean Stations 265 to 274 This remarkable deep sea mud consists for the greater part of well preserved siliceous shells of Polycystina Spumellaria and Nassellaria Not less important however especially for the study of

the Acantharia and Phodaria are the wonderful preparations stained with carmine and mounted in Canada balsam on the spot by Dr John Murray. One such preparation e.g. from Station 271 often contains twenty or thirty sometimes even fifty new species. In many of these preparations the individual parts of the unicellular organism are so well preserved that they show clearly the characteristic peculiarities of the legions and orders. Since the material for these preparations was taken with the tow net not only from the surface of the sea but also from different bathymetrical zones it furnishes valuable conclusions regarding the chorology as well as the physiology and morphology of the group. For many new discoveries I am indebted to the study of such preparations of which I have examined about a thousand from 168 different Stations compare 240. In addition to these about 100 bottles were handed to me containing partly bottom deposits partly tow net gatherings. Sir Wyville Thomson who directed the investigations of the Challenger with so much devotion and only partly saw its results has laid me under a deep debt of obligation not less is this the case however with his successor Dr John Murray. I am especially indebted to both gentlemen for the freedom they have allowed me in the carrying out of my work and especially for the permission to include a description of all known Radiolaria in the Challenger Report which has thus become a second edition many times enlarged of my Monograph published in 1862. Since all previous literature of the subject has been consulted and critically revised it is hoped that this Report will form a useful foundation for future investigations. All names of sufficiently described Radiolaria published during the first half century of our knowledge of the class from 1834 to 1884 are inserted in alphabetical order in the index at the end of this work. In addition to the treasures of the Challenger my own collection of Radiolaria has yielded many new forms whose description is here included. On my journeys to the Mediterranean an account of which is given in the introduction to my Monograph of the Medusae I have given special attention to these delicate microscopic organisms for more than thirty years. Besides the various points on the Mediterranean the Atlantic Ocean at the Canaries in the winter of 1866-67 yielded many interesting new forms whilst my voyage across the Indian Ocean from Aden to Bombay in November 1881 thence to Ceylon and back by Socotra in March 1882 was still more productive. In particular some extended excursions which I had the opportunity of making from Belligemma and Matura at the southern extremity of Ceylon gave me an insight into the rich treasures of the Indian Ocean. Most important however as regards the knowledge of the Indian Radiolaria are the collections which Captain Heinrich Rabbe of Bremen has so beautifully preserved during his many voyages through that region. In the neighbourhood of Madagascar and the Cocos Islands more especially and also in the Sunda Archipelago he met with large swarms of Radiolaria among which were many new and remarkable forms. These were of special value for completing the chorology and the more so since the course of the Challenger in the Indian Ocean lay very far to the southwards. I will therefore take this opportunity of repeating my best thanks to Captain Rabbe for the friendly donation of his valuable collection.

Electron Transport in Quantum Dots Jonathan P. Bird,2013-11-27 When I was contacted by Kluwer Academic Publishers in the Fall of 200 I inviting me to edit a volume of papers on the issue of electron transport in quantum dots I was excited by what I saw as an ideal opportunity to provide an overview of a field of research that has made significant contributions in recent years both to our understanding of fundamental physics and to the development of novel nanoelectronic technologies The need for such a volume seemed to be made more pressing by the fact that few comprehensive reviews of this topic have appeared in the literature in spite of the vast activity in this area over the course of the last decade or so With this motivation I set out to try to compile a volume that would fairly reflect the wide range of opinions that has emerged in the study of electron transport in quantum dots Indeed there has been no effort on my part to ensure any consistency between the different chapters since I would prefer that this volume instead serve as a useful forum for the debate of critical issues in this still developing field In this matter I have been assisted greatly by the excellent series of articles provided by the different authors who are widely recognized as some of the leaders in this vital area of research
