The Coming Merger Of Science And Religion:

The Coming Merger of Science and Religion Gerald L. Vano, 1990-01-01 **Persons and Immortality** Kenneth A. Bryson, 2022-02-07 The religious belief in personal immortality depends on the evidence for the existence of God an immaterial soul or mind and human nature We also need to support the view that God will always want to maintain relationships with us in the afterlife So immortality is a hard sell The suffering of innocent victims suggests that the existence of a loving God is not self evident Furthermore the soul s separation from the body at death raises the troublesome problem of personal identity How can that be me in the afterlife without my body The tradition from Plato to Descartes plants the seed of personal immortality in our rational nature But the deconstruction of human nature suggests that our species is not special Yet the belief in immortality lingers The first step in the reconstruction of personal immortality is found in systems theory or belief that the whole individuates the part This view suggests that we are the outcome of relationships rather than eternal natures entering into relationships We are the product of relationships taking place at three basic levels 1 In psyche where being human is the result of a tendency toward good and evil 2 As social entities where the existence of other human beings individuates us 3 In being s unconcealment where the intelligibility of things provides a foundation for epistemic life Heidegger s view of the nothing or horizon surrounding being allows us to identify God as creator entering into personal relationships with us a view supported by contemporary science That will be me in the afterlife if the relationships that individuate me in my pre mortem state continue into my post mortem existence The reversal in being s unconcealment suggests that human death continues the cycle of personal existence *Prophets and Photons* Benjamin E Zeller, 2010-03-01 This in depth study shows how new religious movements offer a variety of strategies for reconciling science and religious faith By the twentieth century established religious traditions were forced to grapple with the challenges presented by scientific knowledge and innovation But emerging religions still led by a living founder to guide them found new ways to respond to science The Hare Krishnas the Unification Church and Heaven s Gate each found distinct ways to incorporate major findings of modern American science understanding it as central to their wider theological and social agendas In *Prophets and Photons* Benjamin Zeller examines how these New Religious Movements NRMs crafted their views on science during their founding period and how those views evolved over time These NRMs shed light on how religious groups new old alternative or mainstream could respond to the tremendous growth of power and prestige of science in late twentieth century America In this engrossing book Zeller carefully shows that religious groups had several methods of creatively responding to science and that the often assumed conflict based model of science vs religion must be replaced by a more nuanced understanding of how religions operate in our modern scientific world **Religious Belief and Science** Glenn H. Utter, 2024-12-12 This resource helps readers navigate and better understand the religious cultural and political impact of American views of religious faith and scientific inquiry Do different religious faiths and traditions hold varying views on

Charles Darwin's theory of evolution How does religious belief shape American attitudes about vaccination and climate change How have American political affiliations been influenced by these controversies and debates This all in one resource provides answers to all these questions and more Coverage includes narrative chapters detailing how religious belief and science have intersected in the lives of Americans historically as well as how they shape our lives today Other features include scholarly essays discussing how people of different religious beliefs as well as people who are non religious view science and its role in American society biographical profiles of activists and opinion shapers tables and figures primary documents annotated bibliography and chronology of events

When Religious Faith Collides with Science Jan M. Long, 2016-08-17 A 2014 Gallup Poll indicated that 26 percent of Americans believe that humans came into existence less than 10 000 years ago with a much larger 37 percent believing the world was created in six 24 hour days Those percentages represent around 83 million and 118 million people respectively suggesting these to be ideas that resonate with a large swath of the population Given the prevalence of such thinking the question looms Is it possible that so many people could be wrong or is science simply mistaken about some of these matters This book is very much about the importance process plays in the conclusions that are reachable with Jan Long proposing that process itself can answer such questions doing so in a way that offers credibility He proposes that process entails a set of well established rules for how knowledge is acquired and these can help guide the formation of a sacred construct about beginnings In the final analysis it is a process that seeks to replace dogmatic thinking with humble and tentative expressions about that which is knowable about the many mysteries of reality that convey to sentient beings awe and wonder

The Transformation of Theology, 1830-1890 Charles D. Cashdollar, 2014-07-14 Charles Cashdollar reinterprets nineteenth century British and American Protestant thought by identifying positivism as the central intellectual issue of the era Positivism meant at first the ideas of the French thinker Auguste Comte later in the century the term indicated a more general opposition to supernatural religion Cashdollar shows that contemporary thinkers recognized positivism at each of these stages as the most fundamental of the proliferating challenges to religious belief He further reveals how the encounter with positivism altered Protestant orthodoxy in both subtle and radical ways Positivists denied that humans could know anything other than physical phenomena Declaring many orthodox beliefs archaic they proposed a new ethically based vision of service to humanity After portraying the dissemination of these positions among British and American Protestants the author explains how each of several groups reacted A few theologians rejected positivism outright but many more responded by recasting their own beliefs The implications of this story of change extend to such topics as Darwinism Biblical criticism the rise of the social sciences theological liberalism and

human in an age of science technology and faith The ability to ask such a question suggests at least a partial answer in that however we describe ourselves we bear a major role in determining what we will become In this book Philip Hefner reminds us that this inescapable condition is the challenge and opportunity of Homo sapiens as the created co creator In four original chapters and an epilogue Hefner frames the created co creator as a memoirist with an ambiguous legacy explores some of the roots of this ambiguity emphasizes the importance of answering this ambiguity with symbols that can interpret it in wholesome ways proposes a partial theological framework for co creating such symbols and applies this framework to the challenge of using technology like artificial intelligence and robotics to create other co creators in our own image Editors Jason P Roberts and Mladen Turk have compiled eight responses to Hefner s work to honor his scholarly career and answer his call to help co create a more wholesome future in an age of science technology and faith **Man's Fate and God's**
