Masters of Theory Andrew Warwick, 2011-04-15 Winner of the the Susan Elizabeth Abrams Prize in History of Science When Isaac Newton published the Principia three centuries ago only a few scholars were capable of understanding his conceptually demanding work Yet this esoteric knowledge quickly became accessible in the nineteenth and early twentieth centuries when Britain produced many leading mathematical physicists In this book Andrew Warwick shows how the education of these masters of theory led them to transform our understanding of everything from the flight of a boomerang to the structure of the universe Warwick focuses on Cambridge University where many of the best physicists trained He begins by tracing the dramatic changes in undergraduate education there since the eighteenth century especially the gradual emergence of the private tutor as the most important teacher of mathematics Next he explores the material culture of mathematics instruction showing how the humble pen and paper so crucial to this study transformed everything from classroom teaching to final examinations Balancing their intense intellectual work with strenuous physical exercise the students themselves known as the Wranglers helped foster the competitive spirit that drove them in the classroom and informed the Victorian ideal of a manly student Finally by investigating several historical cases such as the reception of Albert Einstein's special and general theories of relativity Warwick shows how the production transmission and reception of new knowledge was profoundly shaped by the skills taught to Cambridge undergraduates Drawing on a wealth of new archival evidence and illustrations *Masters of Theory* examines the origins of a cultural tradition within which the complex world of theoretical physics was made commonplace

Schleef, 2005-12-22 How does one become a member of an elite profession *Managing Elites* examines how elites in training contest rationalize and ultimately enthusiastically embrace their dominant positions in society Using interviews with 79 law and MBA students the author argues that elite socialization requires both accommodation and resistance to professional ideologies Students develop a collective cynicism about elements of their education learning that their discipline imparts esoteric knowledge but also claiming that they didn't learn anything They struggle with the idea that fellow students are all equally intelligent and therefore deserving of elite status and the continuing emphasis on activities that sort students Students resist that paths to success promoted by school cultures investment banking consulting or becoming partner in a large law firm Such cynicism is indeed ultimately revealed to be temporary as most students end up in full support of these jobs of least resistance Their critiques do however create tensions between competition and cooperation between the individual and the collective and between egalitarianism and elitism Part of elite socialization is learning to deal with these tensions or more specifically to hold contradictory ideals at the same time **Living in the Labyrinth of Technology** Willem H. Vanderburg, 2005-12-15 From the very beginnings of their existence human beings have distinguished themselves from other animals by not taking immediate experience for granted Everything was symbolized according to its meaning and value a fallen branch from a tree became a lever a tree trunk floating in the river became a canoe Homo logos created communities based on cultures humanity's first megaproject Further symbolization of the human community and its relation to nature led to the possibility of creating societies and civilizations Everything changed as these interposed themselves between the group and nature Homo societas created ways of life able to give meaning direction and purpose to many groups by means of very different cultures humanity's second megaproject What Das Kapital did for the nineteenth century and La technique did for the twentieth Willem H Vanderburg's *Living in the Labyrinth of Technology* seeks to create for the twenty first century an attempt at understanding the world in a manner not shackled to overspecialized scientific knowing and technical doing Western civilization may well be creating humanity's third megaproject based not on symbolization for making sense of and living in the world but on highly specialized desymbolized knowing stripped of all peripheral understanding Vanderburg focuses on two interdependent forces

in his narrative namely people changing technology and technology changing people The latter aspect although rarely considered turns out to be the more critical one for understanding the spectacular successes and failures of contemporary ways of life As technology continues to change the social and physical world the experiences of this world grow people's minds and society's cultures thereby re-creating human life in the image of technology Living in the Labyrinth of Technology argues that the twenty-first century will be dominated by this pattern unless society intervenes on human as opposed to technical terms
