An exploration of depictions and use of water within Renaissance Italy and especially in the work of polymath Leonardo da Vinci Both a practical necessity and a powerful symbol water presents one of the most challenging problems in visual art due to its formlessness clarity and mutability In Renaissance Italy it was a nearly inexhaustible subject of inquiry for artists engineers and architects alike it represented an element to be productively harnessed and a force of untamed nature Watermarks places the depiction and use of water within an intellectual history of early modern Italy examining the parallel technological and aesthetic challenges of mastering water and the scientific and artistic practices that emerged in response to them Focusing primarily on the wide ranging work of Leonardo da Vinci 1452 1519 at once an artist scientist and inventor Leslie Geddes shows how the deployment of artistic media such as ink and watercolor closely correlated with the engineering challenges of controlling water in the natural world For da Vinci and his peers she argues drawing was an essential form of visual thinking Geddes analyses a wide range of da Vinci s subject matter including machine drawings water management schemes and depictions of the natural landscape and demonstrates how drawing as an intellectual practice a form of scientific investigation and a visual representation constituted a distinct mode of problem solving integral to his understanding of the natural environment Throughout Geddes draws important connections between works by da Vinci that have long been overlooked the artistic and engineering practices of his day and critical questions about the nature of seeing and depicting the almost unseeable during the early modern period      **The Science of Leonardo** Fritjof Capra, 2008-12-02

Leonardo da Vinci's scientific explorations were virtually unknown during his lifetime despite their extraordinarily wide range. He studied the flight patterns of birds to create some of the first human flying machines, designed military weapons and defenses, studied optics, hydraulics, and the workings of the human circulatory system, and created designs for rebuilding Milan, employing principles still used by city planners today. Perhaps most importantly, Leonardo pioneered an empirical, systematic approach to the observation of nature, what is known today as the scientific method. Drawing on over 6,000 pages of Leonardo's surviving notebooks, acclaimed scientist and bestselling author Fritjof Capra reveals Leonardo's artistic approach to scientific knowledge and his organic and ecological worldview. In this fascinating portrait of a thinker centuries ahead of his time, Leonardo singularly emerges as the unacknowledged father of modern science. From the Trade Paperback edition.
