## **The Coffee:**

*The Coffee Paradox* Benoit Daviron, Stefano Ponte, 2013-07-18 Can developing countries trade their way out of poverty International trade has grown dramatically in the last two decades in the global economy and trade is an important source of revenue in developing countries Yet many low income countries have been producing and exporting tropical commodities for a long time They are still poor This book is a major analytical contribution to understanding commodity production and trade as well as putting forward policy relevant suggestions for solving the commodity problem Through the study of the global value chain for coffee the authors recast the development problem for countries relying on commodity exports in entirely new ways They do so by analysing the so called coffee paradox the coexistence of a coffee boom in consuming countries and of a coffee crisis in producing countries New consumption patterns have emerged with the growing importance of specialty fair trade and other sustainable coffees In consuming countries coffee has become a fashionable drink and coffee bar chains have expanded rapidly At the same time international coffee prices have fallen dramatically and producers receive the lowest prices in decades This book shows that the coffee paradox exists because what farmers sell and what consumers buy are becoming increasingly different coffees It is not material quality that contemporary coffee consumers pay for but mostly symbolic quality and in person services As long as coffee farmers and their organizations do not control at least parts of this immaterial production they will keep receiving low prices The Coffee Paradox seeks ways out from this situation by addressing some key questions What kinds of quality attributes are combined in a coffee cup or coffee package Who is producing these attributes How can part of these attributes be produced by developing country farmers To what extent are specialty and sustainable coffees achieving these objectives
