Raman Spectroscopy in Cultural Heritage Preservation Howell G. M. Edwards, Peter Vandenabeele, Philippe Colomban, 2022-10-13 This book addresses the application of Raman spectroscopic techniques to a range of diverse problems which arise in the study conservation and restoration of artefacts and sites closely related to our cultural heritage as well as in authentication These themes are naturally wider than what at first might be considered as artworks and archaeological artefacts and the topics include pigments paintings ceramics glass sculpture and patination corrosion textiles industrial archaeology the degradation and preservation of biomaterials mummies and human skeletal remains An interesting feature is the inclusion of modern case studies which describe specific problems and approaches to the Raman spectral analysis of items important to our cultural heritage The text is prefaced with an introduction to the important parameters used in nondestructive Raman measurements and also highlights some future applications based upon novel miniaturised instrumentation for in field studies and potential screening work which will identify specimens which would repay further studies in the laboratory An attempt is made to give a snapshot of the state of the art evolution since the beginning of the technique 1970s and to point out potential further development The book is co edited by three international experts with many years experience in the application of Raman spectroscopy to artworks archaeological artefacts and in the investigation of materials and sites for cultural heritage preservation and each editor has undertaken to write individual chapters and different topics personally The adopted approach is designed to convey the sort of information which has become available from the adoption of analytical Raman spectroscopy to different problems in the field of cultural heritage preservation through the spectral interrogation of artefacts and how the interpretation of the spectral data can assist museum curators archaeologists and cultural heritage historians in the preservation and conservation of ancient materials and sites a particular advantage in this respect is the ability of Raman spectroscopy to determine generally in a strictly noninvasive procedure at the laboratory or on site with mobile instruments the presence of both organic and inorganic components in a particular specimen together nondestructively without any chemical and mechanical pretreatment being undertaken which is an essential requirement for rare and valuable samples An important aside from this work is the means of spectral identification of ongoing biodeterioration and biological colonisation in specimens in storage and the effects of environmental deterioration such as humidity and temperature upon their integrity

Neanderthal Man Svante Pääbo, 2014-02-11 A preeminent geneticist winner of the 2022 Nobel Prize in medicine hunts the Neanderthal and Denisovan genomes to answer the biggest question of them all how did our ancestors become human Neanderthal Man tells the riveting personal and scientific story of the quest to use ancient DNA to unlock the secrets of human evolution Beginning with the study of DNA in Egyptian mummies in the early 1980s and culminating in the sequencing of the Neanderthal genome in 2010 Neanderthal Man describes the events intrigues failures and triumphs of these scientifically rich years through the lens of the pioneer and inventor of the field of ancient DNA Svante Pääbo We learn

that Neanderthal genes offer a unique window into the lives of our ancient relatives and may hold the key to unlocking the mysteries of where language came from as well as why humans survived while Neanderthals went extinct P bo redrew our family tree and permanently changed the way we think about who we are and how we got here For readers of Richard Dawkins David Reich and Hope Jahren Neanderthal Man is the must read account of how he did it **8 Practice Tests for Reading and Math** Michael Priestley,2001-12 Comrades on the Colca Eugene Buchanan,2016-10-18 A modern day real life adventure this book will take readers along for a rollicking ride through South America on a race to the bottom of the Earth When the author first met Polish explorer Yurek Majcherczyk on a commercial feasibility expedition down Ecuador s Quijos River in 1989 he did not know it would lead to taking part in a Polish race stumbling upon a mummy filled cave and even getting wrapped up in a legend linking long lost Incan riches to a riverfront castle in Poland As the adventurers plunge deeper and deeper into unknown territory they discover a rival Polish team trying to usurp their goal The author seamlessly weaves these tales with his own exploits and adventures climaxing with a tumultuous hike out of the canyon with both teams returning to complete their race the following year *Prehistoric Humans in Film and Television* Michael Klossner,2015-01-09 From the early days of the movies cavemen have been a popular subject for filmmakers not surprisingly since the birth of cinema occurred only a few decades after the earliest scientific studies of prehistoric man Filmmakers however were not constrained by the emerging science instead they most often took a comedic look at prehistory a trend that continued throughout the 20th century Prehistoric humans also populated adventure fantasy films with the original One Million B C 1940 leading the charge Documentaries were also made but it was not until the 1970s that accurate film accounts of prehistoric humans finally emerged This exhaustive work provides detailed accounts of 581 film and television productions that feature depictions of human prehistory Included are dramas and comedies set in human prehistory documentaries and films and television shows in which prehistoric people somehow exist in historical periods from the advent of civilization up to the present or in extraterrestrial settings Each entry includes full filmographic data including year of release running time production personnel cast information and format A description of each film provides background on the prehistoric elements Contemporary critical commentary is included for many of the works **Ancient Lives** Brian M. Fagan,2016-01-20 Theory and Methods in Archaeology and Prehistory Written for complete beginners in a narrative style Ancient Lives is aimed at introductory courses in archaeology and prehistory that cover archaeological methods and theory as well as world prehistory The first half of Ancient Lives covers the basic principles methods and theoretical approaches of archaeology The second half is devoted to a summary of the major developments of human prehistory the origins of humankind and the archaic world the origins and spread of modern humans the emergence of food production and the beginnings of civilization Learning Goals Upon completing this book readers should be able to Understand the basic principles of archaeology Summarize the major developments of human prehistory Social Bodies Helen Lambert,Maryon

McDonald,2009 A proliferation of press headlines social science texts and ethical concerns about the social implications of recent developments in human genetics and biomedicine have created a sense that at least in European and American contexts both the way we treat the human body and our attitudes towards it have changed This volume asks what really happens to social relations in the face of new types of transaction such as organ donation forensic identification and other new medical and reproductive technologies that involve the use of corporeal material Drawing on comparative insights into how human biological material is treated it aims to consider how far human bodies and their components are themselves inherently social The case studies ranging from animal human transformations in Amazonia to forensic reconstruction in post conflict Serbia and the treatment of Native American specimens in English museums all underline that without social relations there are no bodies but only human remains The volume gives us new and striking ethnographic insights into bodies as sociality as well as a potentially powerful analytical reconsideration of notions of embodiment It makes a novel contribution too to science and society debates

Anthropology and Nature

Kirsten Hastrup,2013-08-15 On the basis of empirical studies this book explores nature as an integral part of the social worlds conventionally studied by anthropologists The book may be read as a form of scholarly edgework resisting institutional divisions and conceptual routines in the interest of exploring new modalities of anthropological knowledge making The present interest in the natural world is partly a response to large scale natural disasters and global climate change and to a keen sense that nature matters matters to society at many levels ranging from the microbiological and genetic framing of reproduction over co species development to macro ecological changes of weather and climate Given that the human footprint is now conspicuous across the entire globe in the oceans as well as in the atmosphere it is difficult to claim that nature is what is given and permanent while people and societies are ephemeral and simply derivative features This implies that society matters to nature and some natural scientists look towards the social sciences for an understanding of how people think and how societies work The book thus opens up a space for new forms of reflection on how natures and societies are generated
