Rothwell, 1992 This book is a pragmatic text designed to enable the reader to use the database INGRES with the minimum amount of effort It provides the essential foundation for becoming either an expert user of the system or mastering database design Combining a practical approach with a theoretical understanding this text allows the reader to become proficient in INGRES to understand what features are being used why      **Fifty Years of Relational, and Other Database Writings** C.J. Date, Fifty years of relational It s hard to believe the relational model has been around now for over half a century But it has it was born on August 19th 1969 when Codd s first database paper was published And Chris Date has been involved with it for almost the whole of that time working closely with Codd for many years and publishing the very first and definitive book on the subject in 1975 In this book s title essay Chris offers his own unique perspective two chapters on those fifty years No database professional can afford to miss this one of a kind history But there s more to this book than just a little personal history Another unique feature is an extensive and in depth discussion nine chapters of a variety of frequently asked questions on relational matters covering such topics as mathematics and the relational model relational algebra predicates relation valued attributes keys and normalization missing information and the SQL language Another part of the book offers detailed responses to critics four chapters Finally the book also contains the text of several recent interviews with Chris Date covering such matters as RM V2 XML NoSQL The Third Manifesto and how SQL came to dominate the database landscape      *Readings in Database Systems* Joseph M. Hellerstein, Michael Stonebraker, 2005 The latest edition of a popular text and reference on database research with substantial new material and revision covers classical literature and recent hot topics Lessons from database research have been applied in academic fields ranging from bioinformatics to next generation Internet architecture and in industrial uses including Web based e commerce and search engines The core ideas in the field have become increasingly influential This text provides both students and professionals with a grounding in database research and a technical context for understanding recent innovations in the field The readings included treat the most important issues in the database area the basic material for any DBMS professional This fourth edition has been substantially updated and revised with 21 of the 48 papers new to the edition four of them published for the first time Many of the sections have been newly organized and each section includes a new or substantially revised introduction that discusses the context motivation and controversies in a particular area placing it in the broader perspective of database research Two introductory articles never before published provide an organized current introduction to basic knowledge of the field one discusses the history of data models and query languages and the other offers an architectural overview of a database system The remaining articles range from the classical literature on database research to treatments of current hot topics including a paper on search engine architecture

and a paper on application servers both written expressly for this edition The result is a collection of papers that are seminal and also accessible to a reader who has a basic familiarity with database systems      Making Databases Work Michael L. Brodie, 2018-12-14 This book celebrates Michael Stonebraker's accomplishments that led to his 2014 ACM A M Turing Award for fundamental contributions to the concepts and practices underlying modern database systems The book describes for the broad computing community the unique nature significance and impact of Mike's achievements in advancing modern database systems over more than forty years Today data is considered the world's most valuable resource whether it is in the tens of millions of databases used to manage the world's businesses and governments in the billions of databases in our smartphones and watches or residing elsewhere as yet unmanaged awaiting the elusive next generation of database systems Every one of the millions or billions of databases includes features that are celebrated by the 2014 Turing Award and are described in this book Why should I care about databases What is a database What is data management What is a database management system DBMS These are just some of the questions that this book answers in describing the development of data management through the achievements of Mike Stonebraker and his over 200 collaborators In reading the stories in this book you will discover core data management concepts that were developed over the two greatest eras so far of data management technology The book is a collection of 36 stories written by Mike and 38 of his collaborators 23 world leading database researchers 11 world class systems engineers and 4 business partners If you are an aspiring researcher engineer or entrepreneur you might read these stories to find these turning points as practice to tilt at your own computer science windmills to spur yourself to your next step of innovation and achievement      Databases in Historical Research Charles Harvey, Jon Press, 1995-12-18 This textbook builds knowledge progressively and sympathetically from first principles to advanced topics The authors explain how to take a project from the specification stage to completion and offer guidance on choice of approach techniques hardware and software Key ideas are presented in a readily understandable form through the use of diagrams and summary boxes and the text is brought to life through the use of case studies An ideal handbook for the undergraduate postgraduate and professional historian embarking on a dissertation or historical research      Relational Database Writings, 1991-1994 C. J. Date, 1995 Readers familiar with the three prior volumes of database guru Chris Date's Relational Database Writings series will need no further recommendation The fourth volume compiles Date's authoritative columns articles and papers on various aspects of relational technology spanning the years 1991 to 1994      Multimedia Database Systems Kingsley C.
