**Institutions and Environmental Change** Oran R. Young, Leslie A. King, Heike Schroeder, 2008-08-22 This overview of recent research on how institutions matter in tackling environmental problems reports the findings and policy implications of a decade long international research project. Studies show that institutions play a role both in causing and in addressing problems arising from human environment interactions. But the nature of this role is complex and not easily described. This book presents an overview of recent research on how institutions matter in efforts to tackle such environmental problems as the loss of biological diversity, the degradation of forests, and the overarching issue of climate change. Using the tools of the new institutionalism in the social sciences, the book treats institutions as sets of rights, rules, and decision making procedures. Individual chapters present research findings and examine policy implications regarding questions of causality, performance, and institutional design, as well as the themes of institutional fit or misfit, interplay, and scale. *Institutions and Environmental Change* is the product of a decade long international research project on the Institutional Dimensions of Global Environmental Change (IDGEC) carried out under the auspices of the International Human Dimensions Programme. The book's policy insights demonstrate that research on institutions can provide the basis for practical advice on effective ways to deal with the most pressing environmental problems of our times. On Environmental Governance Oran R. Young, 2016-01-08 In *On Environmental Governance* Oran R. Young examines a variety of efforts to meet the challenge of governing human interaction with the environment in the interest of sustainability. At the same time, he considers measures to minimize restrictions on human actors in using their natural resources. Young looks at issues including climate change, biodiversity, deforestation, greenhouse gas emissions, and carbon cycle disruption in exploring impacts from the local to the global. The book draws on general ideas about the nature of governance while exploring new models for governing human environment relations

*Rethinking Authority in Global Climate Governance* Thomas Hickmann, 2015-10-16 In the past few years, numerous authors have highlighted the emergence of transnational climate initiatives such as city networks, private certification schemes, and business self-regulation in the policy domain of climate change. While these transnational governance arrangements can surely contribute to solving the problem of climate change, their development by different types of sub- and non-state actors does not imply a weakening of the intergovernmental level. On the contrary, many transnational climate initiatives use the international climate regime as a

point of reference and have adopted various rules and procedures from international agreements Rethinking Authority in Global Climate Governance puts forward this argument and expands upon it using case studies which suggest that the effective operation of transnational climate initiatives strongly relies on the existence of an international regulatory framework created by nation states Thus this book emphasizes the centrality of the intergovernmental process clustered around the United Nations Framework Convention on Climate Change UNFCCC and underscores that multilateral treaty making continues to be more important than many scholars and policy makers suppose This book will be of great interest to students and scholars of global environmental politics climate change and sustainable development *Perspectives on Sociological Theories, Methodological Debates and Organizational Sociology* Medani P. Anderson,2014-09-19 Few concerns preoccupy contemporary progressive thought as much as the issue of how to achieve a sustainable human society The problems impeding this goal include those of how to arrest induced global environmental

change GEC persistent disagreements about the contribution of economic activities to GEC and further differences in views on how these activities can be reformed in order to reduce the rate of change and thus to mitigate threats to much life on Earth Reforming Law and Economy for a Sustainable Earth aims to help resolve these problems in two ways Since addressing GEC will require global coordination the book first clarifies the conditions necessary to achieve this effectively Paul Anderson explores these conditions with the aid of a sustained analysis of key concepts in influential disciplines particularly in social and political theory and law relating to the transition to a sustainable economy Second Anderson tackles the problem of how to arrest GEC by incisively evaluating two leading theoretical positions in terms of their capacity to support the conditions required for effective global coordination From this basis the book offers an extensive critique of the idea that global environmental problems can be solved within the framework of global capitalism It also critically reviews and advances the proposition that global sustainability can be achieved only by changing the capitalist form of organizing the economy Enriched by a genuinely interdisciplinary approach the originality of Reforming Law and Economy for a Sustainable Earth lies in the manner it combines a rigorous analysis of the requirements for global sustainability with decisive conclusions as to what are and what are not viable means of fulfilling those requirements The book advances research on sustainability within key disciplines among them political theory law and social science by offering a timely and insightful statement about the global environmental predicament in the 21st century      **Routledge Handbook of Global**

**How International Law Works in Times of Crisis** George Ulrich, Ineta Ziemele, 2019-09-19 For some time the word crisis has been dominating international political discourse But this is nothing new Crisis has always been part of the discipline of international law History indeed shows that international law has developed through reacting to previous experiences of crisis reflecting an agreement on what it takes to avoid their repetition However human society evolves and challenges existing rules structures and agreements International law is confronted with questions as to the suitability of the existing legal framework for new stages of development Ulrich and Ziemele here bring together an expert group of scholars to address the question of how international law confronts crises today in terms of legal thought rule making and rule application The editors have characterized international law and crisis discourse as one of a dialectical nature and have grouped the articles contained in the volume under four main themes security immunities sustainable development and philosophical perspectives Each theme pertains to an area of international law which at the present moment in time is subject to notable challenges and confrontations from developments in human society The surprising general conclusion which emerges is that by and large the international legal system contains concepts principles rules mechanisms and formats for addressing the various developments that may prima facie seem to challenge these very same elements of the system Their use however requires informed policy decisions
