*Handbook of Psychiatry: Volume 2, Mental Disorders and Somatic Illness* M. H. Lader, 1983-08-31 This 1986 volume of the Handbook of Psychiatry covers that area of psychiatry contiguous with general medicine and in particular neurology. It raises general issues especially with respect to fundamental problems of the mind-body relationship and deals with medical disorders related to psychiatry. The topics discussed include ischaemic heart disease, peptic ulcers, bronchial asthma, renal failure, endocrine disorders and ageing as well as neuropsychiatry. There is also an account of selected aspects of severe subnormality concentrating on the practical management of the severely handicapped child and adult. Throughout this volume the contributors provide a clinically relevant account of their topics. The volume will continue to hold value as a comprehensive survey of the medical history of mental disorders associated with somatic illness. *Published Scientific Papers of the National Institutes of Health* National Institutes of Health (U.S.), 1976 Each issue lists papers published during the preceding year.

**Neuroanatomy for the Neuroscientist** Stanley Jacobson, Elliott M. Marcus, Stanley Pugsley, 2017-10-25 The purpose of this textbook is to enable a Neuroscientist to discuss the structure and functions of the brain at a level appropriate for students at many levels of study including undergraduate, graduate, dental or medical school level. It is truer in neurology than in any other system of medicine that a firm knowledge of basic science material that is the anatomy, physiology and pathology of the nervous system enables one to readily arrive at the diagnosis of where the disease process is located and to apply their knowledge at solving problems in clinical situations. The authors have a long experience in teaching neuroscience courses at the first or second year level to medical and dental students and to residents in which clinical information and clinical problem solving are integral to the course.
