A General Explanation-Based Learning Mechanism and Its Application to Narrative Understanding Raymond J. Mooney, 1990 By Raymond J Mooney **Investigating Explanation-Based Learning** Gerald DeJong, 2012-12-06

Explanation Based Learning EBL can generally be viewed as substituting background knowledge for the large training set of exemplars needed by conventional or empirical machine learning systems The background knowledge is used automatically to construct an explanation of a few training exemplars The learned concept is generalized directly from this explanation The first EBL systems of the modern era were Mitchell s LEX2 Silver s LP and De Jong s KIDNAP natural language system Two of these systems Mitchell s and De Jong s have led to extensive follow up research in EBL This book outlines the significant steps in EBL research of the Illinois group under De Jong This volume describes theoretical research and computer systems that use a broad range of formalisms schemas production systems qualitative reasoning models non monotonic logic situation calculus and some home grown ad hoc representations This has been done consciously to avoid sacrificing the ultimate research significance in favor of the expediency of any particular formalism The ultimate goal of course is to adopt or devise the right formalism

Explanation, Causation and Deduction Fred Wilson, 2012-12-06 The purpose of this essay is to defend the deductive nomological model of explanation against a number of criticisms that have been made of it It has traditionally been thought that scientific explanations were causal and that scientific explanations involved deduction from laws In recent years however this three fold identity has been challenged there are it is argued causal explanations that are not scientific scientific explanations that are not deductive deductions from laws that are neither causal explanations nor scientific explanations and causal explanations that involve no deductions from laws The aim of the present essay is to defend the traditional identities and to show that the more recent attempts at invalidating them fail in their object More specifically this essay argues that a Humean version of the deductive nomological model of explanation can be defended as 1 the correct account of scientific explanation of individual facts and processes and as 2 the correct account of causal explanations of individual facts and processes The deductive nomological model holds that to explain an event E say that a is G one must find some initial conditions C say that a is F and a law or theory T such that T and C jointly entail E and both are essential to the deduction
