Foster, 2016-11-02 Growing alarm over the harm done by humans to the natural world and even to the viability of our own industrial civilization compels us to ask the deeper moral question What should be the human relationship to nature Matthew R Foster starts by assessing three contrasting patterns of moral reasoning the Progress Ethic that created the world we live in the biblically inspired Stewardship Ethic and the Connection Ethic based on scientific understanding of the interdependence of all natural entities Critical analysis reveals that none of these ethics is able to sustain the values it advocates due to two unsupportable presumptions that the norms of human morality are commensurate with the natural world and that the value of an entity is an intrinsic property Foster argues that in order for a future environmental ethic to be both logically coherent and environmentally constructive it must start from unconventional notions First because nature will never be commensurate with human moral reasoning non rational resources must be employed despite the risks involved Second value resides in the relationship of one entity to another and does not belong intrinsically to either in short value is foremost a verb rather than a noun Foster proposes a new paradigm attentive to the realm of value relations among all natural entities one which offers mediating opportunities between nature and morality In this new ethic there are no shoulds Rather moral responsibilities to the natural entities around us are elective placing us in an unfamiliar yet potentially liberating network of relationships This book will be of interest to scholars both instructors and students of environmental ethics philosophy religion and intellectual history and all who are concerned about the environmental challenges of our time TV Guide ,1990 Video Movies ,1992 **Bowker's Complete Video** Bowker's Complete Video Directory 2001,2001 Program Guide ,1990 **Video Source Book** Directory, 2000 Gale Group, 1999-10-28 A guide to programs currently available on video in the areas of movies entertainment general interest education sports recreation fine arts health science business industry children juvenile how to instruction Video Teacher's Wraparound Edition: Twe Biology Everyday Rating Guide for Libraries ,1992 **New York** ,1992-06 Experience Albert Kaskel, 1994-04-19 The Threatened Gene Cary Fowler, 1990 Since the days of the hunter gatherers Man has used for food plants of a vast genetic diversity Yet the very earliest farming laid the seeds of a frightening tendency greatly increased by the Agricultural Revolution Uniformity in agriculture has been growing at an ever increasing rate most

particularly in the use of plant breeds As fewer varieties are employed so the neglected ones disappear and are lost to the global gene pool Genetic erosion is fast gathering pace The southern hemisphere now holds most of the world's germplasm the genetic basis of seeds while the developed world is consolidating its control of genetic resources Unexpected disasters to a particular crop variety will inevitably hit less developed countries harder than the economic superpowers which still see the problem in short and local terms The Threatened Gene looks at the social effects of genetic erosion from the Irish potato blight to mass Ethiopian starvation Control over the gene pool is shifting from farmers to scientists and head of industry while political considerations determine agricultural policy with increasing frequency. This comprehensive uncompromising study is written in lay terms from an international perspective Despite the grimness of the message the tale is told with fluency and even humour and offers a solution to potential disaster in which each reader may play a part Instructor's Guide to Text and Media [for] Essential Biology Edward J. When he was struck by an unexpected life threatening illness his efforts to find a way to save his life took him back to Africa where he encountered the age old rituals and powerful healing methods of African shamans Their mysterious ways have much to teach us and are as relevant today as they were in ancient times
