Social Choice with Partial Knowledge of Treatment Response Charles F. Manski, 2005-10-30 This book addresses key aspects of this broad question exploring and partially resolving pervasive problems of identification and statistical inference that arise when studying treatment response and making treatment choices Charles Manski addresses the treatment choice problem directly using Abraham Wald's statistical decision theory taking into account the ambiguity that arises from identification problems under weak but justifiable assumptions **BOOK JACKET** Identification Problems in the Social Sciences Charles F. Manski, 1999-03-15 This book provides a language and tools for finding bounds on predictions social and behavioral scientists can logically make from nonexperimental and experimental data Manski draws on criminology demography epidemiology social psychology sociology and economics to illustrate this language and to demonstrate the usefulness of the tools Measuring Crime and Criminality John MacDonald, 2017-09-08 *Measuring Crime and Criminality* focuses on how different approaches to measuring crime and criminality are used to test existing criminological theories Each chapter reviews a key approach for measuring criminal behaviour and discusses its strengths or weaknesses for explaining the facts of crime or answers to central issues of criminological inquiry The book describes the state of the field on different approaches for measuring crime and criminality as seen by prominent scholars in the field Among the featured contributions are The Use of Official Reports and Victimization Data for Testing Criminological Theories The Design and Analysis of Experiments in Criminology and Growth Curve Mixture Models for Measuring Criminal Careers Also included are papers titled Counterfactual Methods of Causal Inference and Their Application to Criminology Measuring Gene Environment Interactions in the Cause of Antisocial Behaviour and What Has Been Gained and Lost through Longitudinal Research and Advanced Statistical Models This volume of *Advances in Criminological Theory* illustrates how understanding the various ways criminal behaviour is measured is useful for developing theoretical insights on the causes of crime Public Policy in an Uncertain World Charles F. Manski, 2013-02-14 Manski argues that public policy is based on untrustworthy analysis Failing to account for uncertainty in an uncertain world policy analysis routinely misleads policy makers with expressions of certitude Manski critiques the status quo and offers an innovation to improve both how policy research is conducted and how it is used by policy makers **Patient Care under Uncertainty** Charles F. Manski, 2019-09-10 How cutting edge economics can improve decision making methods for doctors Although uncertainty is a common element of patient care it has largely been overlooked in research on evidence based medicine Patient Care under Uncertainty strives to correct this glaring omission Applying the tools of economics to medical decision making Charles Manski shows how uncertainty influences every stage from risk analysis to treatment and how this can be reasonably confronted In the language of econometrics uncertainty refers to the inadequacy of available evidence and knowledge to yield accurate information on outcomes In the context of health care a common example is a choice between periodic

surveillance or aggressive treatment of patients at risk for a potential disease such as women prone to breast cancer While these choices make use of data analysis Manski demonstrates how statistical imprecision and identification problems often undermine clinical research and practice Reviewing prevailing practices in contemporary medicine he discusses the controversy regarding whether clinicians should adhere to evidence based guidelines or exercise their own judgment He also critiques the wishful extrapolation of research findings from randomized trials to clinical practice Exploring ways to make more sensible judgments with available data to credibly use evidence and to better train clinicians Manski helps practitioners and patients face uncertainties honestly He concludes by examining patient care from a public health perspective and the management of uncertainty in drug approvals Rigorously interrogating current practices in medicine Patient Care under Uncertainty explains why predictability in the field has been limited and furnishes criteria for more cogent steps forward

Identification for Prediction and Decision Charles F. Manski, 2009-06-30 This book is a full scale exposition of Charles Manski's new methodology for analyzing empirical questions in the social sciences He recommends that researchers first ask what can be learned from data alone and then ask what can be learned when data are combined with credible weak assumptions Inferences predicated on weak assumptions he argues can achieve wide consensus while ones that require strong assumptions almost inevitably are subject to sharp disagreements Building on the foundation laid in the author's Identification Problems in the Social Sciences Harvard 1995 the book's fifteen chapters are organized in three parts Part I studies prediction with missing or otherwise incomplete data Part II concerns the analysis of treatment response which aims to predict outcomes when alternative treatment rules are applied to a population Part III studies prediction of choice behavior Each chapter juxtaposes developments of methodology with empirical or numerical illustrations The book employs a simple notation and mathematical apparatus using only basic elements of probability theory *Characterizing and Communicating Uncertainty in the Assessment of Benefits and Risks of Pharmaceutical Products* Institute of Medicine, Board on Health Sciences Policy, Forum on Drug Discovery, Development, and Translation, 2014-12-19 Despite the extensive body of evidence that informs regulatory decisions on pharmaceutical products significant uncertainties persist including the underlying variability in human biology factors associated with the chemistry of a drug and limitations in the research and clinical trial process itself that might limit the generalizability of results As a result regulatory reviewers are consistently required to draw conclusions about a drug's safety and efficacy from imperfect data Efforts are underway within the drug development community to enhance the evaluation and communication of the benefits and risks associated with pharmaceutical products aimed at increasing the predictability transparency and efficiency of pharmaceutical regulatory decision making Effectively communicating regulatory decisions necessarily includes explanation of the impact of uncertainty on decision making On February 12 and May 12 2014 the Institute of Medicine's Forum on Drug Discovery Development and Translation held public workshops to advance the development of more systematic and structured approaches to characterize

and communicate the sources of uncertainty in the assessment of benefits and risks and to consider their implications for pharmaceutical regulatory decisions Workshop presentations and discussions on February 12 were convened to explore the science of identifying and characterizing uncertainty in scientific evidence and approaches to translate uncertainties into decisions that reflect the values of stakeholders The May 12 workshop presentations and discussions explored tools and approaches to communicating about scientific uncertainties to a range of stakeholders in the drug development process Characterizing and Communicating Uncertainty in the Assessment of Benefits and Risks of Pharmaceutical Products summarizes the presentation and discussion of both events This report explores potential analytical and communication approaches and identifies key considerations on their development evaluation and incorporation into pharmaceutical benefit risk assessment throughout the entire drug development lifecycle

Interregional Travel National Academies of Sciences, Engineering, and Medicine, Transportation Research Board, Policy Studies, Committee for a Study of Intercity Passenger Travel Issues and Opportunities in Short-Haul Markets, 2016-04-07 TRB Special Report 320 Interregional Travel A New Perspective for Policy Making examines the demand for and supply of interregional transportation in the United States Major additions to transportation infrastructure including high speed rail are being considered for some of the country's most heavily traveled 100 to 500 mile corridors The availability and use of the automobile airplane and train for interregional travel are reviewed along with the rejuvenated intercity bus U S interregional corridors and transportation options are contrasted with those in Japan and Europe where substantial investments have been made in passenger rail Public investments in new long lived transportation infrastructure can be risky because of uncertainty about future demand and the development of new technologies and competing transportation services Decisionmakers in interregional corridors face the added challenge of having to coordinate investments across multiple jurisdictions The report recommends actions to reduce this uncertainty and create stronger institutional means for developing the country's interregional corridors TR News 303 features an article on Interregional Travel A New Perspective for Policy Making A video about the research is now available At the 2016 TRB Annual Meeting January 10-14 2016 a session entitled Interregional Travel Policymaking from a New Perspective was webcast live These videos provide an overview of various components of the project Introduction Part 1 Overview of Project Scope Part 2 Data and Information Needs Part 3 Intercity Bus Operations Question and Answer Session Presenters Tom Deen Nancy McGuckin Joe Schweiterman Moderated by Martin Wachs

Dialogues Around Models And Uncertainty: An Interdisciplinary Perspective Pauline Barrieu, 2020-05-05 This book helps develop a better understanding of how researchers from different scientific backgrounds view models and uncertainty It provides key steps in fostering and encouraging interdisciplinary research which is vital in addressing several big issues that society faces today such as climate change longevity financial and actuarial risk management To make progress in these areas researchers must develop an understanding of differing perspectives and methods of those working in other disciplines This title presents the views and

understandings of eminent people in their respective fields through interviews on the topic of modelling and uncertainty. Each expert was asked the same set of questions to help readers understand the similarities and differences existing between various disciplines. It also helps to bridge some of the gaps encountered by those carrying out inter and multi disciplinary research and suggests new approaches to modelling and uncertainty quantification.
