Social Philosophy And Ecological Scarcity:

Social Philosophy and Ecological Scarcity Keekok Lee, 2019-09-18 Originally published in 1989 *Social Philosophy and Ecological Scarcity* presents a systematic study of the implications of ecological scarcity for social philosophy The book argues for a new social philosophy based on a conception of the good society and the good life which makes fewer rather than more demands on scarce ecological resources The book shows that the two major competing social philosophies in modern philosophical thought the bourgeois liberal and the state socialist are both forms of capitalism Despite their obvious differences they both pursue the logic of capitalism of ever increasing accumulation growth and consumption This pursuit is carried out by means of modern science and its technology which assume that Nature's resources are inexhaustible and can be exploited to meet infinite human wants or needs ignoring ecological scarcity The recognition of ecological scarcity would lead to a social philosophy based on a frugal mode of socialism which has more affinities with the social visions of Fourier and Morris than with that of Marx Their theories far from being too utopian are shown as more realistic and less fantastic than either bourgeois capitalism or state capitalism based on the Marxist model

Interpreting Nature I. G. Simmons, 2013-01-11 Human society has constructed many varied notions of the environment Scientific information about the environment is often seen as the only worthwhile knowledge This ignores the complexities created by interaction between people and the environment Idealist thinking argues that everything we know is based on a construct of our minds and that all is possible Can both be correct and true Interpreting Nature explores the position of humanity in the environment from the principle that the models we construct are imperfect and can only be provisional Having examined the way in which the natural sciences have interrogated nature the types of data produced and what they mean to us this looks at the environment within philosophy and ethics the social sciences and the arts and analyses their role in the formation of environmental cognition

A Radical Green Political Theory Alan Carter, 2013-12-16 This volume is the first systematic comprehensive and cogent environmental political philosophy It exposes the relationships between the ever worsening environmental crises the nature of prevailing economic structures and the role of the modern state and concludes that the combination of these factors is driving humanity towards destruction Innovative provocative and cutting edge A Radical Green Political Theory will be of enormous value to all those with an interest in the environment political theory and moral and political philosophy

Foundations of Futures Studies Wendell Bell, 2017-07-05 Futures studies is a new field of inquiry involving systematic and explicit thinking about alternative futures It aims to demystify the future make possibilities for the future more known to us and increase human control over the future This book summarizes and expands contributions of futurists to the envisioning power and well being of humanity Bell brings together futurist intellectual tools describing and explaining not only the methods but also the nature concepts theories and exemplars of the field Foundations of Futures Studies fulfills Bell's five main purposes for writing this two volume effort 1 to show that futures studies like other fields from anthropology to zoology exists as an identifiable sphere of intellectual activity 2 to create a teaching instrument that can be used as a basic text for core courses in futures studies 3 to futurize the thinking of specialists in other disciplines 4 to contribute to the further development and improvement of futures studies and 5 to provide tools to empower both ordinary people and leaders to act in ways that create better futures for themselves and their societies Bell maintains that despite its sometimes doomsday rhetorical style and widespread use by special interests futures studies offers hope for the future of humanity and concrete ways of realizing that hope in the real world of our everyday lives It will appeal to all interested in futures studies as well as sociologists economists political scientists and historians

The Ethics of Environmental Concern Robin Attfield, 2011-03-15 First published in 1983 The Ethics of Environmental Concern has become a classic in the relatively new field of environmental ethics Examining traditional attitudes toward nature and the degree to which these attitudes enable us to cope with modern ecological

problems Robin Attfield looks particularly at the Judeo Christian heritage of belief in humankind's dominion the tradition of stewardship and the more recent belief in progress to determine the extent to which these attitudes underlie ecological problems and how far they embody resources adequate for combating such problems He then examines concerns of applied ethics and considers our obligations to future generations the value of life and the moral standing and significance of nonhumans Simultaneously he offers and defends a theory of moral principles appropriate for dealing with such concerns as pollution scarce natural resources population growth and the conservation and preservation of the environment The second edition includes a new preface and introduction as well as a bibliographic essay and an updated list of references incorporating relevant scholarship since the publication of the first edition

Green Political Thought Andrew Dobson, 2012-10-02 Andrew Dobson's highly acclaimed introduction to green political thought is now available in a new edition It has been fully revised and updated to take into account the areas that have grown in importance since the last edition was published The third edition includes a comparison of ecologism with other principal modern ideologies such as liberalism conservatism fascism socialism feminism and anarchism an assessment of the relationship between green thinking and democracy justice and citizenship an exploration of sustainable development addressing the fundamental question of what to sustain real environmental problems and how green thinking relates to them

Value, Obligation, and Meta-Ethics Robin Attfield, 2020-10-12 This work defends an interrelated set of theses in value theory normative ethics and meta ethics The three Parts correspond to these three areas Part One Value defends a biocentric theory of moral standing and then the coherence and objectivity of belief in intrinsic value despite recent objections Intrinsic value is located in the flourishing of living creatures specifically a neo Aristotelian species relative account is supplied of wellbeing or flourishing in terms of the development of the essential capacities of one's species There follows a theory of priorities or of relative intrinsic value in which the satisfaction of basic needs takes priority over other needs and over wants and the interests of complex and sophisticated creatures over those of others where they are at stake Part Two defends a practice consequentialist theory of the criteria of rightness and of obligation which leaves room for supererogation underpins our intuitions about justice commends population growth only where it is genuinely desirable and responds better than act consequentialism to objections like that concerned with the separateness of persons Part Three sifts meta ethical theories rejects moral relativism and defends a cognitivist and naturalist meta ethic In defending analytical naturalism it takes into account the latest literature on supervenience By responding to recent discussions this study supersedes my Theory of Value and Obligation 1987 It is equipped with detailed end notes and an ample bibliography which could prove a research tool of itself

The Natural and the Artefactual Keekok Lee, 1999-01-01 In this book philosopher Keekok Lee challenges one of the central assumptions of contemporary environmentalism that if we could reduce or eliminate pollution we could save the planet without unduly disrupting our modern industrialized societies Lee argues instead that the process of modernization with its

attendant emphasis on technological innovation has fundamentally transformed nature into just another manmade artefact. Ultimately what needs to be determined is if nature has value above and beyond human considerations whether aesthetic, spiritual or biological. This provocative book attempts to reconfigure environmental ethics positing the existence of two separate ontological categories: the natural and the artefactual. Natural entities, be they organisms or inert matter, are morally considerable because they possess the ontological value of independence, whereas artefacts are created by humans expressly to serve their own interests and ends.

Justice and Responsibility—Sensitive Egalitarianism R. Robinson, 2014-04-03. This text explores the place to locate the cut between those inequalities for which it is fair to hold one responsible and those for which it is not. The argument traces a thread of intellectual history identifying a rejection of strong property rights which we inherit from Locke and find in contemporary defenders of entitlements such as Nozick.

Green Political Theory Robert E. Goodin, 2013-04-30. With their remarkable electoral successes, Green parties worldwide seized the political imagination of friends and foes alike. Mainstream politicians busily disparage them and imitate them in turn. This new book shows that greens deserve to be taken more seriously than that. This is the first full length philosophical discussion of the green political programme. Goodin shows that green public policy proposals are unified by a single coherent moral vision: a green theory of value that is largely independent of the green theory of agency dictating green political mechanisms, strategies and tactics on the one hand and personal lifestyle recommendations on the other. The upshot is that we demand that politicians implement green public policies and implement them completely without committing ourselves to the other, often more eccentric aspects of green doctrine that threaten to alienate so many potential supporters.

Political Ideologies Robert Eccleshall, Vincent Geoghegan, Richard Jay, Michael Keeny, Ian MacKenzie, Richard Wilford, 2014-03-21. Now in its fourth edition, *Political Ideologies: An Introduction* continues to be the best introductory textbook for students of political ideologies. Completely revised and updated throughout, this edition features a comprehensive introduction to all of the most important ideologies. Brand new chapters on multiculturalism, anarchism and the growing influence of religion on politics. More contemporary examples of twenty-first century iterations of liberalism, socialism, conservatism, fascism, green political theory, nationalism and feminism. Enhanced discussion of the end of ideology debates and emerging theories of ideological formation. Six new contributors. Accessible and packed with both historical and contemporary examples, this is the most useful textbook for scholars and students of political ideologies. The contributors to this volume have all taught or carried out research at the School of Politics, International Studies and Philosophy of Queen's University Belfast or have close research connections with the School.

Reconstructing Nature Peter Dickens, 2002-11-01. One of the main features of the contemporary environmental crisis is that no one has a clear idea of what is going on. The author uses an extension of Marx's theory of alienation to explain why people find it so difficult to relate their different knowledges of the natural and social world. He argues that nevertheless it is possible to relate these to the abstractions of ecological discourse. Emancipation can come only through embracing

science and rationality rather than rejecting them and in the process humanity as well as the non human world will benefit
