## Societies and nature in the Sahel: ecological diversity and social dynamics

Claude Raynaud\*

*Université Bordeaux 2, 146 rue Léo Saignat, 33076 Bordeaux, Cedex, France*

### Abstract

This paper, based on the results of a comprehensive interdisciplinary research programme focused on five countries of the Western Sahel, suggests a framework for analysing the complex and constantly changing dynamics of the relations that Sahelian societies maintain with their environment. Firstly, tools for understanding local variability are required. Demographic variables and the diversity of the modes of land use are combined to show that the type and intensity of exploitation of natural resources varies dramatically from one locality to another. There are significant differences between Sahelian social systems and cultures, and these influence their relations with the 'nature' they exploit and transform. Secondly, understanding social, economical and technical changes in the Sahel requires that we recognise that powerful and conflicting processes of transformation are taking place (in contrast to the image of "tradition" widely associated with Sahelian societies). These changes are found to be the result of an interaction between the state, rural producers, urban speculators, international development agencies, and other actors. Practical lessons emerge from the analysis. Access and negotiation over natural resources must be facilitated between many actors who compete for them, and local social and environmental problems must be seen in the context of broader patterns of influence and change. The State will retain its importance in the region. "Participation" in development must not only involve local "populations", but also the "developers" of all types, in contributing to and understanding the human dimensions of environmental change in the Sahel. © 2001 Elsevier Science Ltd. ### 1. Introduction

The horrifying famine of 1974 and the accompanying death of several hundred thousand cattle confronted world public opinion, as well as specialists in development and natural scientists, with the first evidence of a huge ecological crisis in the Sahel; a crisis that has lasted until the present day. It precipitated an unprecedented mobilisation of resources, local and international goodwill, and a major scientific debate. From the beginning, this became not so much a confrontation of scientific hypotheses, as a sharp division between competing perspectives. Natural and social scientists each thought that they alone held the ultimate explanation.

As the drought continued in the mid-1970s, and even intensified, it became obvious that the crisis was long-lived, and that it was not confined to one part of the

Sahelian zone. Despite this, in-depth geographical and anthropological studies, as well as the knowledge accumulated through development interventions, highlighted the diversity of its impacts. There were wide variations in the driving forces of famine at the local scale; social, demographic and economic situations were extremely variable. This variability shows that it does not make sense to pretend that there is a general, unique or ready-made description and explanation of the Sahelian crisis. My aim in this short paper is to present some elements which can help to make a more concrete and detailed vision of Sahelian diversity, and of the nature of the dynamics that are at play behind it. My arguments are taken from a recent book, where they are substantiated and referenced in detail (Raynaud, 1997).

## **Societies And Nature In The Sahel Rethinking Environmental Degradation:**

The End of Desertification? Roy H. Behnke, Michael Mortimore, 2016-04-12 The question in the title of this book draws attention to the shortcomings of a concept that has become a political tool of global importance even as the scientific basis for its use grows weaker. The concept of desertification it can be argued has ceased to be analytically useful and distorts our understanding of social environmental systems and their resiliency particularly in poor countries with variable rainfall and persistent poverty. For better policy and governance we need to reconsider the scientific justification for international attempts to combat desertification. Our exploration of these issues begins in the Sahel of West Africa where a series of severe droughts at the end of the 20th century led to the global institutionalization of the idea of desertification. It now seems incontrovertible that these droughts were not caused primarily by local land use mismanagement effectively terminating a long standing policy and scientific debate. There is now an opportunity to treat this episode as an object lesson in the relationship between science the formation of public opinion and international policy making. Looking beyond the Sahel the chapters in this book provide case studies from around the world that examine the use and relevance of the desertification concept. Despite an increasingly sophisticated understanding of dryland environments and societies the uses now being made of the desertification concept in parts of Asia exhibit many of the shortcomings of earlier work done in Africa. It took scientists more than three decades to transform a perceived desertification crisis in the Sahel into a non event. This book is an effort to critically examine that experience and accelerate the learning process in other parts of the world.

Globalization and New Geographies of Conservation Karl S. Zimmerer, 2006-09-15 Examining the geographical dimensions of environmental management and conservation activities implemented on landscapes worldwide. Globalization and New Geographies of Conservation creates a new framework and collects original case studies to explore recent developments in the interaction of humans and their environment. Globalization and New Geographies of Conservation makes four important arguments about the recent coupling of conservation and globalization that is reshaping the place of nature in human environmental change. First it has led to an unprecedented number of spatial arrangements whose environmental management goals and prescribed activities vary along a spectrum from strict biodiversity protection to sustainable utilization involving agriculture food production and extractive activities. Conservation and globalization are also leading by necessity to new scales of management in these activities that rely on environmental science thus shifting the spatial patterning of humans and the environment. This interaction results as well in the unprecedented importance of boundaries and borders. Transnational border issues pose both opportunities and threats to global conservation proposed by organizations and institutions that are themselves international. Lastly Globalization and New Geographies of Conservation argues that the local level has been integral to globalization while the regional level is often eclipsed at the peril of the successful implementation of conservation and management programs. Bridging the gap between geography and life science

Globalization and New Geographies of Conservation will appeal to a broad range of students of the environment conservation planning biodiversity management and development and globalization studies
