Bajaj, 2013-03-14 **Somaclonal Variation and Induced Mutations in Crop Improvement** S.M. Jain, D.S. Brar, B.S. Ahloowalia, 2013-03-14 Genetic variability is an important parameter for plant breeders in any conventional crop improvement programme Very often the desired variation is unavailable in the right combination or simply does not exist at all However plant breeders have successfully recombined the desired genes from cultivated crop germplasm and related wild species by sexual hybridization and have been able to develop new cultivars with desirable agronomic traits such as high yield disease pest and drought resistance So far conventional breeding methods have managed to feed the world's ever growing population Continued population growth no further scope of expanding arable land soil degradation environmental pollution and global warming are causes of concern to plant biologists and planners Plant breeders are under continuous pressure to improve and develop new cultivars for sustainable food production However it takes several years to develop a new cultivar Therefore they have to look for new technologies which could be combined with conventional methods to create more genetic variability and reduce the time in developing new cultivars with early maturity and improved yield The first report on induced mutation of a gene by HJ Muller in 1927 was a major milestone in enhancing variation and also indicated the potential applications of mutagenesis in plant improvement Radiation sources such as X rays gamma rays and fast neutrons and chemical mutagens e.g. ethyl methane sulphonate have been widely used to induce mutations **Somaclonal variation in crop improvement** Y. **Omics Approaches for Sugarcane Crop Improvement** Rajarshi Kumar Gaur, 2022-12-30 In this book the information encompasses various researchable biotechnology aspects of sugarcane its genomic structure diversity comparative and structural genomics data mining etc This book explores both the theoretical and practical aspects of sugarcane crops focusing on innovative processes This book argues in favor of developing an integrated research and development system to strengthen the research and development capabilities of all the areas of sugarcane Further it covers the recent trends of sugarcane biotechnology especially in the next generation sequencing NGS era This book will be very useful for professors and scientists who are working in the area of sugarcane crops by using molecular biology and bioinformatics It is also useful for students to use as a reference for their classes or thesis projects Key features Discusses an integral part of molecular biology and pivotal tools for molecular breeding enables breeders to design cost effective and efficient breeding strategies for sugarcane Discusses the harnessing genomics technologies for genetic engineering and pathogen characterization and diagnosis of sugarcane Provides new examples and problems added where needed Provides insight from contributors drawn from around the globe Biotechnologies of Crop Improvement, Volume 1

Satbir Singh Gosal, Shabir Hussain Wani, 2018-06-22 During the past 15 years cellular and molecular approaches have emerged as valuable adjuncts to supplement and complement conventional breeding methods for a wide variety of crop plants Biotechnology increasingly plays a role in the creation conservation characterization and utilization of genetic variability for germplasm enhancement For instance anther microspore culture somaclonal variation embryo culture and somatic hybridization are being exploited for obtaining incremental improvement in the existing cultivars In addition genes that confer insect and disease resistance abiotic stress tolerance herbicide tolerance and quality traits have been isolated and re introduced into otherwise sensitive or susceptible species by a variety of transgenic techniques Together these transformative methodologies grant access to a greater repertoire of genetic diversity as the gene s may come from viruses bacteria fungi insects animals human beings unrelated plants or even be artificially derived Remarkable achievements have been made in the production characterization field evaluation and commercialization of transgenic crop varieties worldwide Likewise significant advances have been made towards increasing crop yields improving nutritional quality enabling crops to be raised under adverse conditions and developing resistance to pests and diseases for sustaining global food and nutritional security The overarching purpose of this 3 volume work is to summarize the history of crop improvement from a technological perspective but to do so with a forward outlook on further advancement and adaptability to a changing world Our carefully chosen case studies of important plant crops intend to serve a diverse spectrum of audience looking for the right tools to tackle complicated local and global issues

S. Shekhawat, 2009 Plant tissue culture techniques help in understanding basic life processes which is essential to improving crop productivity Furthermore recently molecular biology has assumed great importance with respect to plant biotechnology This book combines all three aspects into one with a focus on practical applications of various techniques It discusses micropropagation studies on several crop plants the molecular basis of understanding various life processes including the molecular basis of somatic embryogenesis and other physiological and biochemical processes having significant biotechnological applications It also covers in vitro studies of certain important plants like Aloe vera Simmondsia chinensis Anacyclus pyrethrum and Crataeva nurvala Arachis hypogaea L Phoenix dactylifera Dendrocalamus asper Asparagus adscendens Roxb natural products of plant origin with their therapeutic potential and biotechnological production as well as genome analysis of crop plants with future applications in biotechnology

**Plant Biotechnology and Plant Genetic Resources for Sustainability and Productivity** Kazuo N. Watanabe, Eija Pehu, 1997-07-21 Plant Biotechnology And Plant Genetic Resources which boasts a truly international list of contributors with a variety of expertise thoroughly explores all the major contemporary concerns It discusses the strategies for the best use of modern biotechnology and precious plant genetic resources to alleviate components associated with global constraints in hunger environment and health This book is a valuable resource for scientists and policy makers as the world faces unprecedented challenges in the sustainability and productivity of the global food and fibre system **Plant Tissue Culture 1** Mr. Rohit Manglik, 2024-07-28 EduGorilla Publication is a trusted name in the education sector committed to empowering learners with high quality study materials and resources Specializing in competitive exams and academic support EduGorilla provides comprehensive and well structured content tailored to meet the needs of students across various streams and levels *Principles and Methods of Plant Breeding* Slavko Borojević, 1990-12-31 No detailed description available for Principles and Methods of Plant Breeding **Tobacco BY-2 Cells: From Cellular Dynamics to Omics** Toshiyuki Nagata, Ken Matsuoka, Dirk Inzé, 2006-09-22 It is our utmost pleasure to present a new book on tobacco BY 2 cells Tobacco BY 2 Cells From Cellular Dynamics to Omics as the 58th volume in the book series Biotechnology in Agriculture and Forestry BAF It represents an extension of the previous book Tobacco BY 2 Cells vol 53 of the BAF Moreover the content is rather different from the latter and includes new topics gleaned from the First International Symposium on Tobacco BY 2 Cells held at the Plant Science Center of the RIKEN Yokohama organized by Nagata Matsuoka and Inzé in September 2004 To this symposium came more than 200 people from different parts of the world to discuss issues Although most of the contributors to the previous volume of Tobacco BY 2 Cells gave talks on their subjects there were many other speakers who presented new topics and approaches So we enjoyed the symposium very much Thus we decided to compile a new volume on

tobacco BY 2 cells which includes these new topics In addition towards the end of the symposium our common understanding was that the tobacco BY 2 cell system is still important in plant biology in particular for studying the dynamic features of plant cells We hope this volume is useful for plant biologists Contents of the book are as follows in Chapters I 1 I 6 various aspects of the cell cycle and cellular dynamics using BY 2 cells are described In Ch ters II 1 II Plant Tissue Culture S.S. Bhojwani,2012-12-02 During the past decade Plant Tissue Culture PTC has attracted considerable attention because of its vital role in plant biotechnology PTC offers novel approaches to plant production propagation and preservation Some in vitro techniques are being applied on a commercial scale while many others hold great potential Consequently the literature in this area has grown rapidly This book deals with recent developments in plant tissue culture and presents a critical assessment of the proven and potential applications of the various in vitro techniques it also highlights current problems limiting the application of tissue culture and projects the future lines of research in this field Induced Mutation Breeding Subodh Kumar Datta,2023-05-24 The book is an excellent reference collection of the research conducted by different workers on induced mutagenesis worldwide for more than 80 years One can get almost all mutation breeding references at one place The book gives a coherent and concise account of all the important and relevant aspects related to induced mutagenesis with an emphasis on recent developments in the field of crop improvement The references have been arranged crop wise and important topic wise which deal with not only classical mutation breeding but also spontaneous mutations somaclonal variations nanoparticles and relevant modern aspects The book highlights 22 chapters covering holistic information on almost all important components such as radiosensitivity chromosomal and morphological abnormalities detection of mutation management of chimera present status of mutation etc of Mutation Breeding Chapters are very informative and one can follow the references on crop and aspect basis since the start of mutation breeding work This book is an excellent resource for researchers and students for understanding proper applications of induced mutations in crop improvement and biological research It is of interest and useful to graduate and postgraduate students horticulturists floriculturists agricultural scientists and breeders related to crop improvement program **Review of Advances in Plant Biotechnology, 1985-88** A.
