agriculture The book focuses on the three most urgent problems the standardization and simplification of landscapes through monocultures the use of pesticides including neonicotinoids other insecticides herbicides and fungicides and the embeddedness of commercial migratory beekeeping in the capitalist agriculture system which among other things has the potential to spread pests and pathogens across continents At the heart of this crisis is the power and influence that a small group of agrochemical corporations have over national and international agricultural policy The book argues for an interspecies alliance of small scale farmers bee advocates beekeepers environmentalists and bees themselves along with a vision for an agricultural system that nurtures multispecies flourishing This book will be of significant interest to readers of political ecology animal geography environmental anthropology food system studies and critical animal studies Journal of Horticulture, Cottage Gardener, and Country Gentleman (varies Slightly) ,1899 **Bee-keepers' Record** ,1903
