Some Random Series Of Functions:

Some Random Series of Functions Jean-Pierre Kahane, 1985 The subject matter of *Some Random Series of Functions* is important and has wide application in mathematics statistics engineering and physics *Some Random Series of Functions* Jean-Pierre Kahane, 1985 **Some random series of functions** Jean-Pierre Kahane, 1985 **Time Series** David R. Brillinger, 2001-09-01 This text employs basic techniques of univariate and multivariate statistics for the analysis of time series and signals **Journal of Fourier Analysis and Applications Special Issue** John J. Benedetto, 2020-03-10 The Journal of Fourier Analysis and Applications is a journal of the mathematical sciences devoted to Fourier analysis and its applications The subject of Fourier analysis has had a major impact on the development of mathematics on the understanding of many engineering and scientific phenomena and on the solution of some of the most important problems in mathematics and the sciences At the end of June 1993 a large Conference in Harmonic Analysis was held at the University of Paris Sud at Orsay to celebrate the prominent role played by Jean Pierre Kahane and his numerous achievements in this field The large variety of topics discussed in this meeting ranging from classical Harmonic Analysis to Probability Theory reflects the intense mathematical curiosity and the broad mathematical interest of Jean Pierre Kahane Indeed all of them are connected to his work The mornings were devoted to plenary addresses while up to four parallel sessions took place in the afternoons Altogether there were about eighty speakers This wide range of subjects appears in these proceedings which include thirty six articles Hardy Martingales Paul F. X. Müller, 2022-07-14 This book presents the probabilistic methods around Hardy martingales for an audience interested in their applications to complex harmonic and functional analysis Building on work of Bourgain Garling Jones Maurey Pisier and Varopoulos it discusses in detail those martingale spaces that reflect characteristic qualities of complex analytic functions Its particular themes are holomorphic random variables on Wiener space and Hardy martingales on the infinite torus product and numerous deep applications to the geometry and classification of complex Banach spaces e g the SL estimates for Doob's projection operator the embedding of L_1 into $L_1 H_1$ the isomorphic classification theorem for the polydisk algebras or the real variables characterization of Banach spaces with the analytic Radon Nikodym property Due to the inclusion of key background material on stochastic analysis and Banach space theory it is suitable for a wide spectrum of researchers and graduate students working in classical and functional analysis **Linear and Complex Analysis Problem Book 3** Victor P. Havin, Nikolai K. Nikolski, 2006-12-08 The 2 volume book is an updated reorganized and considerably enlarged version of the previous edition of the Research Problem Book in Analysis LNM 1043 a collection familiar to many analysts that has sparked off much research This new edition created in a joint effort by a large team of analysts is like its predecessor a collection of unsolved problems of modern analysis designed as informally written mini articles each containing not only a statement of a problem but also historical and methodological comments motivation conjectures and discussion of possible connections of plausible approaches as well as a list of references There are now 342

of these mini articles almost twice as many as in the previous edition despite the fact that a good deal of them have been solved

Analysis at Urbana: Analysis in function spaces Earl Berkson, Newton Tenney Peck, J. Jerry Uhl, 1989
Throughout the academic year 1986-7 the University of Illinois hosted a symposium on mathematical analysis attended by some of the leading figures in the field This resulting book lays emphasis on the synthesis of modern and classical analysis

Canadian Journal of Mathematics, 1993-04 **The Rademacher System in Function Spaces** Sergey V. Astashkin, 2020-07-27 This book presents a systematic treatment of the Rademacher system one of the most important unifying concepts in mathematics and includes a number of recent important and beautiful results related to the Rademacher functions The book discusses the relationship between the properties of the Rademacher system and geometry of some function spaces It consists of three parts in which this system is considered respectively in L_p spaces in general symmetric spaces and in certain classes of non symmetric spaces BMO Paley Cesaro Morrey The presentation is clear and transparent providing all main results with detailed proofs Moreover literary and historical comments are given at the end of each chapter This book will be suitable for graduate students and researchers interested in functional analysis theory of functions and geometry of Banach spaces Trends In Probability And Related Analysis - Proceedings Of Sap'96 N Kono, Narn-rueih Shieh, 1997-10-31 This proceedings volume reflects the current interest especially of researchers in the Asia Pacific region in probability theory and related theory of analysis and statistics It contains the papers of the two survey speakers and of some other speakers and researchers It brings out the theme of SAP an international meeting on some aspects of probability analysis and their interplay Theory of Group Representations and Fourier Analysis F. Encyclopaedia of Mathematics Michiel Hazewinkel, 2013-12-01 This ENCYCLOPAEDIA OF MATHEMATICS aims to be a reference work for all parts of mathematics It is a translation with updates and editorial comments of the Soviet Mathematical Encyclopaedia published by Soviet Encyclopaedia Publishing House in five volumes in 1977-1985 The annotated translation consists of ten volumes including a special index volume There are three kinds of articles in this ENCYCLOPAEDIA First of all there are survey type articles dealing with the various main directions in mathematics where a rather fine subdivision has been used The main requirement for these articles has been that they should give a reasonably complete up to date account of the current state of affairs in these areas and that they should be maximally accessible On the whole these articles should be understandable to mathematics students in their first specialization years to graduates from other mathematical areas and depending on the specific subject to specialists in other domains of science engineers and teachers of mathematics These articles treat their material at a fairly general level and aim to give an idea of the kind of problems techniques and concepts involved in the area in question They also contain background and motivation rather than

precise statements of precise theorems with detailed definitions and technical details on how to carry out proofs and constructions The second kind of article of medium length contains more detailed concrete problems results and techniques

Stochastic Geometry: Percolation, Tessellations, Gaussian Fields and Point Processes Hermine

Biermé,2025-10-03 This volume covers a broad spectrum of topics in stochastic geometry including percolation tessellations Gaussian fields and point processes Based on lectures given at the Stochastic Geometry Days held by the Stochastic Geometry Research Group from 2019 to 2022 the book opens with an introduction to Russo Seymour Welsh theory for the study of percolation before going on to explore random tessellations and their applications the geometry of Gaussian random fields and the zeros of analytic Gaussian fields This discussion naturally leads to the concept of determinantal point processes whose applications in signal processing are the focus of the final chapter Providing a unique and accessible overview of active fields in stochastic geometry their tools and models this collection of lectures will encourage further research and applications

Encyclopaedia of Mathematics M. Hazewinkel,2013-11-11 *Proceedings of the Steklov Institute of Mathematics* Matematičeskij Institut Imeni V. A. Steklova,1967 *Zeros of Gaussian Analytic Functions and Determinantal Point Processes* John Ben Hough,Manjunath Krishnapur ,Yuval Peres ,B'alint Vir'ag ,2009 Examines in some depth two important classes of point processes determinantal processes and Gaussian zeros i e zeros of random analytic functions with Gaussian coefficients This title presents a primer on modern techniques on the interface of probability and analysis

Decoupling Victor de la Peña,Evarist Giné,2012-12-06 Decoupling theory provides a general framework for analyzing problems involving dependent random variables as if they were independent It was born in the early eighties as a natural continuation of martingale theory and has acquired a life of its own due to vigorous development and wide applicability The authors provide a friendly and systematic introduction to the theory and applications of decoupling The book begins with a chapter on sums of independent random variables and vectors with maximal inequalities and sharp estimates on moments which are later used to develop and interpret decoupling inequalities Decoupling is first introduced as it applies in two specific areas randomly stopped processes boundary crossing problems and unbiased estimation U statistics and U processes where it has become a basic tool in obtaining several definitive results In particular decoupling is an essential component in the development of the asymptotic theory of U statistics and U processes The authors then proceed with the theory of decoupling in full generality Special attention is given to comparison and interplay between martingale and decoupling theory and to applications Among other results the applications include limit theorems moment and exponential inequalities for martingales and more general dependence structures results with biostatistical implications and moment convergence in Anscombe s theorem and Wald s equation for U statistics This book is addressed to researchers in probability and statistics and to graduate students The exposition is at the level of a second graduate probability course with a good portion of the material fit for use in a first year course Victor de la Peña is Associate Professor of Statistics at Columbia University and is

one of the more active developers of decoupling **Function Classes on the Unit Disc** Miroslav Pavlović, 2013-12-12 This monograph contains a study on various function classes a number of new results and new or easy proofs of old results Fefferman Stein theorem on subharmonic behavior theorems on conjugate functions and fractional integration on Bergman spaces Fefferman's duality theorem which are interesting for specialists applications of the Hardy Littlewood inequalities on Taylor coefficients to C maximal theorems and C convergence a study of BMOA due to Knese based only on Green's formula the problem of membership of singular inner functions in Besov and Hardy Sobolev spaces a full discussion of g function all $p > 0$ and Calderón's area theorem a new proof due to Astala and Koskela of the Littlewood Paley inequality for univalent functions and new results and proofs on Lipschitz spaces coefficient multipliers and duality including compact multipliers and multipliers on spaces with non normal weights It also contains a discussion of analytic functions and lacunary series with values in quasi Banach spaces with applications to function spaces and composition operators Sixteen open questions are posed The reader is assumed to have a good foundation in Lebesgue integration complex analysis functional analysis and Fourier series Further information can be found at the author's website at <http://poincare.matf.bg.ac.rs/~pavlovic>
