- Forward Dynamics
 - Featherstone's algorithm or Lagrange's equations for generalized coordinates.
- Joint actuator force accounts for the bending and torsional rigidity of the strand.
 - Deviation from the resting position results in a nonzero resisting actuator force.
- Hair-hair interactions are formulated as external forces in addition to gravity.

Structure, Dynamics and Function of Biomolecules Anders Ehrenberg, Rudolf Rigler, Astrid Gräslund, Lennart Nilsson, 2012-12-06 This is a collection of papers presented and discussed

at the first EBSA workshop held at Saltsjöbaden outside Stockholm in Sweden July 6-10 1986 The common theme of these papers is dynamics of biomolecules and how the dynamics depends on the molecular structure and organization and connects to and determines the biological function This is a rapidly expanding field of research which combines many different aspects of molecular biophysics Much material is new and presented for the first time Even if the work so far has been of the kind that is usually called basic research practical applications are clearly indicated in some articles and are waiting around the corner in several other cases At the workshop only one third of the time was used for the formal presentations and two thirds for discussion To this should also be added discussions during the poster sessions During these lively and unrecorded discussions fresh viewpoints emerged and new ideas were created Admittedly our knowledge at present is only fragmentary but when pieces of the puzzle are brought together at a workshop or in a publication of this kind more extended and sometimes unexpected contours and shapes become visible It is our hope that this rapid publication of camera ready manuscripts will transfer some of the spirit at the workshop to the reader and in his or her institute or laboratory initiate further discussions bring forward more ideas and start new experimental approaches

Molecular Conformation and Dynamics of Macromolecules in Condensed Systems M. Nagasawa, 2012-12-02

Macromolecular materials possess some remarkable features arising from the fact that their molecules are made up of more or less flexible chains which can have various conformations The study of molecular conformations and dynamics of macromolecules is important in polymer science and technology from both basic and practical viewpoints In practice these studies have concentrated on dilute solutions but more recently there has been a clear trend towards studying molecular

properties in condensed systems in order to understand the entire macromolecular system based on a unified concept Based on lectures presented by an internationally recognized group of polymer scientists at a meeting held in Japan in October 1987 plus two additional contributions this volume summarises present knowledge of molecular conformations and dynamics of macromolecules from dilute solutions to various condensed systems The book is not a random collection of papers of the usual conference proceedings type Authors prepared their contributions in line with an overall plan for the work were able to discuss the content with colleagues at the meeting and finalised their text after the conference It is thus a comprehensive integrated overview of the field Current developments in both theory and experiment are discussed in a well balanced way The behaviour of macromolecules at phase transition and interface is discussed in relation to their behaviour in bulk systems The book offers a particularly up to date and authoritative picture of the current state of the art and will be of interest to all research and professional workers concerned with polymer science in universities industry and government institutions

Topology and Dynamics of Chaos Christophe Letellier, 2013 The book surveys how chaotic behaviors can be described with topological tools and how this approach occurred in chaos theory Some modern applications are included The contents are mainly devoted to topology the main field of Robert Gilmore's works in dynamical systems They include a review on the topological analysis of chaotic dynamics works done in the past as well as the very latest issues Most of the contributors who published during the 90's including the very well known scientists Otto Rössler René Lozi and Joan Birman have made a significant impact on chaos theory discrete chaos and knot theory respectively Very few books cover the topological approach for investigating nonlinear dynamical systems The present book will provide not only some historical OCo not necessarily widely known OCo contributions about the different types of chaos introduced by Rössler and not just the Rössler attractor Gumowski and Mira's contributions in electronics Poincaré's heritage in nonlinear dynamics but also some recent applications in laser dynamics biology

Geometrical Dynamics of Complex Systems Vladimir G. Ivancevic, Tijana T. Ivancevic, 2006-01-18 Geometrical Dynamics of Complex Systems is a graduate level monographic textbook It represents a comprehensive introduction into rigorous geometrical dynamics of complex systems of various natures By

complex systems in this book are meant high dimensional nonlinear systems which can be but not necessarily are adaptive. This monograph proposes a unified geometrical approach to dynamics of complex systems of various kinds: engineering, physical, biophysical, psychophysical, sociophysical, econophysical, etc. As their names suggest, all these multi-input multi-output (MIMO) systems have something in common: the underlying physics. However, instead of dealing with the popular soft complexity philosophy, we rather propose a rigorous geometrical and topological approach. We believe that our rigorous approach has much greater predictive power than the soft one. We argue that science and technology is all about prediction and control. Observation, understanding, and explanation are important in education at undergraduate level, but after that, it should be all prediction and control. The main objective of this book is to show that high dimensional nonlinear systems and processes of real life can be modelled and analyzed using rigorous mathematics, which enables their complete predictability and controllability as if they were linear systems. It is well known that linear systems, which are completely predictable and controllable by definition, live only in Euclidean spaces of various dimensions. They are as simple as possible mathematically, elegant, and fully elaborated from either scientific or engineering side. However, in nature, nothing is linear. In reality, everything has a certain degree of nonlinearity, which means unpredictability with subsequent uncontrollability.

Topics in Nonlinear Dynamics, Volume 1 Gaetan Kerschen, Douglas Adams, Alex Carrella, 2025-08-07. Topics in Nonlinear Dynamics Volume 1. Proceedings of the 31st IMAC A Conference and Exposition on Structural Dynamics 2013, the first volume of seven from the Conference, brings together contributions to this important area of research and engineering. The collection presents early findings and case studies on fundamental and applied aspects of Structural Dynamics, including papers on Nonlinear Oscillations, Nonlinearities in Practice, Nonlinear System Identification Methods, Nonlinear System Identification, Friction, Contact, Nonlinear Modal Analysis, Nonlinear Modeling, Simulation, Nonlinear Vibration Absorbers, Constructive Utilization of Nonlinearity.

Structure and Dynamics of RNA P. H. van Knippenberg, C. W. Hilbers, 2013-03-08. This volume contains contributions from the speakers at the NATO Advanced Research Workshop on 3D Structure and Dynamics of RNA, which was held in Renesse, The Netherlands, 21–24 August 1985. Two major developments have determined the progress of nucleic acid research during the last decade. First, manipulation of genetic material by recombinant DNA methodology has enabled detailed studies of the function of nucleic acids in vivo. Second, the use of powerful physical methods such as X-ray diffraction and nuclear magnetic resonance spectroscopy in the study of biomacromolecules has provided information regarding the structure and the dynamics of nucleic acids. Both developments were enabled by the advance of synthetic methods that allow preparation of nucleic acid molecules of required sequence and length. The basic understanding of nucleic acid function will ultimately depend on a close collaboration between molecular biologists and biophysicists. In the case of RNA, the ground rules for the formation of secondary structure have been derived from physical studies of oligoribonucleotides. Powerful spectroscopic techniques have revealed more details of A structure, including novel conformations, e.g. left-handed Z-RNA, A

wealth of information has been obtained by studying the relatively small transfer RNA molecules. A few of these RNAs have been crystallized, enabling determination of their three-dimensional structure. It has become apparent that non-classical basepairing between distal nucleotides gives rise to tertiary interactions determining the overall shape of the molecule.
