Ball, Judith V. Douglas, David E. Garets, 2012-12-06 Changes in health care are at a breakneck pace Regardless of the many changes we have collectively experienced delivering health care has been and will continue to be an enormously information intensive process Whether caring for a patient or a population whether managing a clinic or a continuum we are in a knowledge exchange business A major task for our industry and the task for chief information officers CIOs is to find and apply improved strategies and technologies for managing healthcare information In a fiercely competitive healthcare marketplace the pressures to succeed in this undertaking and the rewards associated with success are enormous While the task is still daunting we can all be encouraged by progress being made in information management There are documented successes throughout health care and there is growing recognition by healthcare chief executive officers and boards that information strategies and their deployment are essential to organizational efficiency quite possibly organizational survival *Preventing Violence Against Women and Children* Institute of Medicine, Board on Global Health, Forum on Global Violence Prevention, 2011-10-12 Violence against women and children is a serious public health concern with costs at multiple levels of society Although violence is a threat to everyone women and children are particularly susceptible to victimization because they often have fewer rights or lack appropriate means of protection In some societies certain types of violence are deemed socially or legally acceptable thereby contributing further to the risk to women and children In the past decade research has documented the growing magnitude of such violence but gaps in the data still remain Victims of violence of any type fear stigmatization or societal condemnation and

thus often hesitate to report crimes The issue is compounded by the fact that for women and children the perpetrators are often people they know and because some countries lack laws or regulations protecting victims Some of the data that have been collected suggest that rates of violence against women range from 15 to 71 percent in some countries and that rates of violence against children top 80 percent These data demonstrate that violence poses a high burden on global health and that violence against women and children is common and universal Preventing Violence Against Women and Children focuses on these elements of the cycle as they relate to interrupting this transmission of violence Intervention strategies include preventing violence before it starts as well as preventing recurrence preventing adverse effects such as trauma or the consequences of trauma and preventing the spread of violence to the next generation or social level Successful strategies consider the context of the violence such as family school community national or regional settings in order to determine the best programs

cumulation covers six years 1965-70 *National Library of Medicine Current Catalog* National Library of Medicine (U.S.), 1989 Meeting the Challenge of Chronic Illness Robert L. Kane, Reinhard Priester, Annette M. Totten, 2005-12-21

Chronic conditions such as arthritis, heart disease and Parkinson disease are the principal cause of all sickness and death in the United States and represent the vast majority of health care expenditures. Although we now live in a world dominated by chronic conditions, health care is still organized around a commitment to treating acute illnesses. *Meeting the Challenge of Chronic Illness* examines current deficiencies in chronic illness care and explores ways to improve it. Addressing the challenges of shifting from the primacy of acute illnesses to the predominance of chronic conditions, the authors identify the components necessary to reorganize and reform health care: properly prepared health care workers, involved patients and families, appropriate use of new technologies, especially information systems, an appropriate role for prevention, and the creation of funding approaches that will provide necessary incentives. This book calls on policy makers, health care providers, and educators to address one of the greatest challenges facing the health care system.
