Strategic Data Planning Dale L. Goodhue, 2015-08-05 Excerpt from Strategic Data Planning Lessons From the Field Many large organizations today are finding that even if they can access data from multiple functions the lack of logical data integration common data definitions and codes across information systems makes it difficult or impossible to answer cross functional or cross divisional questions This reduces their ability to take advantage of potential opportunities or respond to business problems Strategic Data Planning is one methodology which can address such problems within the general umbrella of information engineering Resting on the assumption that a relatively stable group of data entities lies at the center of an organization's information processing needs SDP is a formalized top down data centered planning approach that builds a model of the enterprise its functions and its underlying data as a basis for identifying and implementing an integrated set of information systems In spite of strong conceptual arguments for the value of the SDP approach and its use in many organizations empirical researchers have failed to find clear cut evidence of its general success This raises the question of whether the approach is universally appropriate If success is somewhat problematic are there lessons that can be drawn from actual organizational experience The purpose of this paper is to report the results of a series of case studies of SDP efforts to offer insights on the conditions under which SDP is most effective and to propose directions for future research About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

The Diffusion of Electronic Data Interchange Hagen K.C. Pfeiffer, 2012-12-06 This book documents the research I conducted on the subject of Electronic Data Interchange during my time at the Institute of Business Informatics, University of Berne, Switzerland. In this effort I enjoyed a great deal of help from numerous others, including professional colleagues, interview partners, and members of my family. Even though I cannot possibly mention them all, I would like to express my sincere gratitude for their selfless support. Above all, I am grateful to Prof. Dr. Gerhard Knolmayer, who contributed to the book both in its formative stages and throughout its development. He has been an unwavering source of encouragement during the many difficult stages of the investigation, and I greatly benefitted from our discussions of the subject matter. Moreover, he was extremely generous with his time in carefully reviewing all the five chapters. The financial support for this book came from the Hasler Foundation in Berne. I wish to thank the Foundation and especially its Managing Director, Dr. P. A. Jaeger, for funding the empirical part of the research project. Likewise, I am grateful to the University of Berne for providing me with the necessary computer and other resources. The Institute of Business Informatics should be commended particularly for its very stimulating work environment.

Rethinking Management Information Systems Wendy Currie, Robert Galliers, 1999 This book examines influential ideas within Management Information Systems (MIS). Leading international contributors summarize key topics and explore a variety of issues currently being discussed in the field. They revisit influential ideas such as socio-technical theory, systems thinking, and structuration theory, and demonstrate their relevance to newer ideas such as re-engineering, hybrid management, knowledge workers, and outsourcing. In locating MIS within an interdisciplinary context, particularly in the light of rapid technological changes, this book will form the link between past and future approaches to MIS.

Tabular Application Development for Information Systems Talib Damij, 2011-06-27 The aim of the book is to represent a new object-oriented methodology called Tabular Application Development (TAD). The book is designed to approach the subject of Business Process Reengineering and Information Systems Development from a new perspective, which is unique to this methodology. TAD methodology has six phases and develops the information system using several tables. The concept of the methodology discussed first translates the information about the behavior of the system into different tables and then uses the information collected in the tables to develop the information system. In addition to this, the methodology covers Business Process Reengineering. In recent years, BPR became a very important way of assuring changes in an organization's structure and functioning to create a better, more competitive and successful enterprise. The book is organized in three parts: introduction, methodology, and applications case studies.
