Materials for Composite Applications Sohail Rana,Raul Figueiro,2016-01-22 This book focuses on the fibers and textiles used in composite materials It presents both existing technologies currently used in commercial applications and the latest advanced research and developments It also discusses the different fiber forms and architectures such as short fibers unidirectional tows directionally oriented structures or advanced 2D and 3D textile structures that are used in composite materials In addition it examines various synthetic natural and metallic fibers that are used to reinforce polymeric cementitious and metallic matrices as well as fiber properties special functionalities manufacturing processes and composite processing and properties Two entire chapters are dedicated to advanced nanofiber and nanotube reinforced composite materials The book goes on to highlight different surface treatments and finishes that are applied to improve fiber matrix interfaces and other essential composite properties Although a great deal of information about fibers and textile structures used for composite applications is already available this is the only book currently available that discusses all types of fibers and structures used to reinforce polymers cement metal or soil to improve their general performance and multi functional behaviors As such it fills an important gap in the available literature and provides a valuable resource for a wide range of students and researchers from academia and industry **Machine Learning Applied to Composite Materials** Vinod

Kushvaha,M. R. Sanjay,Priyanka Madhushri,Suchart Siengchin,2022-11-29 This book introduces the approach of Machine Learning ML based predictive models in the design of composite materials to achieve the required properties for certain applications ML can learn from existing experimental data obtained from very limited number of experiments and subsequently can be trained to find solutions of the complex non linear multi dimensional functional relationships without

any prior assumptions about their nature In this case the ML models can learn from existing experimental data obtained from 1 composite design based on various properties of the matrix material and fillers reinforcements 2 material processing during fabrication 3 property relationships Modelling of these relationships using ML methods significantly reduce the experimental work involved in designing new composites and therefore offer a new avenue for material design and properties The book caters to students academics and researchers who are interested in the field of material composite modelling and design
