System Level Design Of Reconfigurable Systems On Chips:

System Level Design of Reconfigurable Systems-on-Chip Nikolaos Voros, Konstantinos Masselos, 2006-02-23 System Level Design of Reconfigurable Systems on Chip provides insight in the challenges and difficulties encountered during the design of reconfigurable Systems on Chip SoCs Reconfiguration is becoming an important part of System on Chip design to cope with the increasing demands for simultaneous flexibility and computational power The book focuses on system level design issues for reconfigurable SoCs and provides information on reconfiguration aspects of complex SoCs and how they can be implemented in practice It is divided in three parts The first part provides background information and requirements on reconfigurable technologies and systems The second one identifies existing methodological gaps and introduces a design flow for developing reconfigurable Systems on Chip The high level part of the design flow can be covered by two C based methodologies one based on SystemC and one based on OCAPI XL both including appropriate extensions to handle reconfiguration issues Finally the third part of the book presents reconfigurable SoCs from the perspective of the designer through three indicative case studies from the wireless and multimedia communication domain *Dynamic System Reconfiguration in Heterogeneous Platforms* Nikolaos Voros, Alberto Rosti, Michael Hübner, 2009-05-28 Dynamic System Reconfiguration in Heterogeneous Platforms defines the MORPHEUS platform that can join the performance density advantage of reconfigurable technologies and the easy control capabilities of general purpose processors It consists of a System on Chip made of a scalable system infrastructure hosting heterogeneous reconfigurable accelerators providing dynamic reconfiguration capabilities and data stream management capabilities VLSI-SoC: Research Trends in VLSI and Systems on Chip Giovanni De Micheli, Salvador Mir, Ricardo Reis, 2010-08-23 This book contains extended and revised versions of the best papers presented during the fourteenth IFIP TC 10 WG 10.5 International Conference on Very Large Scale Integration This conference provides a forum to exchange ideas and show industrial and academic research results in microelectronics design The current trend toward increasing chip integration and technology process advancements brings about stimulating new challenges both at the physical and system design levels *Languages for Embedded Systems and their Applications* Martin Radetzki, 2009-05-24 Embedded systems take over complex control and data processing tasks in diverse application fields such as automotive avionics consumer products and telecommunications They are the primary driver for improving overall system safety efficiency and comfort The demand for further improvement in these aspects can only be satisfied by designing embedded systems of increasing complexity which in turn necessitates the development of new system design methodologies based on specification design and verification languages The objective of the book at hand is to provide researchers and designers with an overview of current research trends results and application experiences in computer languages for embedded systems The book builds upon the most relevant contributions to the 2008 conference Forum on Design Languages FDL the premier international conference specializing in this field These contributions have been selected

based on the results of reviews provided by leading experts from search and industry In many cases the authors have improved their original work by adding breadth depth or explanation

Dynamically Reconfigurable Systems Marco Platzner,Norbert Wehn,2010-03-10 Dynamically Reconfigurable Systems is the first ever to focus on the emerging field of Dynamically Reconfigurable Computing Systems While programmable logic and design time configurability are well elaborated and covered by various texts this book presents a unique overview over the state of the art and recent results for dynamic and run time reconfigurable computing systems Reconfigurable hardware is not only of utmost importance for large manufacturers and vendors of microelectronic devices and systems but also a very attractive technology for smaller and medium sized companies Hence Dynamically Reconfigurable Systems also addresses researchers and engineers actively working in the field and provides them with information on the newest developments and trends in dynamic and run time reconfigurable systems

Dynamic Reconfigurable Network-on-Chip Design: Innovations for Computational Processing and Communication Shen, Jih-Sheng,Hsiung, Pao-Ann,2010-06-30 Reconfigurable computing brings immense flexibility to on chip processing while network on chip has improved flexibility in on chip communication Integrating these two areas of research reaps the benefits of both and represents the promising future of multiprocessor systems on chip This book is the one of the first compilations written to demonstrate this future for network on chip design Through dynamic and creative research into questions ranging from integrating reconfigurable computing techniques to task assigning scheduling and arrival to designing an operating system to take advantage of the computing and communication flexibilities brought about by run time reconfiguration and network on chip it represents a complete source of the techniques and applications for reconfigurable network on chip necessary for understanding of future of this field
