Evaluation Methods in Medical Informatics Charles P. Friedman, Jeremy C. Wyatt, 2013-03-14 As director of a training program in medical informatics I have found that one of the most frequent inquiries from graduate students is Although I am happy with my research focus and the work I have done how can I design and carry out a practical evaluation that proves the value of my contribution Informatics is a multifaceted interdisciplinary field with research that ranges from theoretical developments to projects that are highly applied and intended for near term use in clinical settings The implications of proving a research claim accordingly vary greatly depending on the details of an individual student s goals and thesis state ment Furthermore the dissertation work leading up to an evaluation plan is often so time consuming and arduous that attempting the perfect evaluation is frequently seen as impractical or as diverting students from central programming or implementation issues that are their primary areas of interest They often ask what compromises are possible so they can provide persuasive data in support of their claims without adding another two to three years to their graduate student life Our students clearly needed help in dealing more effectively with such dilemmas and it was therefore fortuitous when in the autumn of 1991 we welcomed two superb visiting professors to our laboratories

technologies *Quantitative Assessments of Distributed Systems* Dario Bruneo, Salvatore Distefano, 2015-04-08 Distributed systems employed in critical infrastructures must fulfill dependability timeliness and performance specifications Since these systems most often operate in an unpredictable environment their design and maintenance require quantitative evaluation of deterministic and probabilistic timed models This need gave birth to an abundant literature devoted to formal modeling languages combined with analytical and simulative solution techniques The aim of the book is to provide an overview of techniques and methodologies dealing with such specific issues in the context of distributed systems and covering aspects such as performance evaluation reliability availability energy efficiency scalability and sustainability Specifically techniques for checking and verifying if and how a distributed system satisfies the requirements as well as how to properly evaluate non functional aspects or how to optimize the overall behavior of the system are all discussed in the book The scope has been selected to provide a thorough coverage on issues models and techniques relating to validation evaluation and optimization of distributed systems The key objective of this book is to help to bridge the gaps between modeling theory and the practice in distributed systems through specific examples
