Systems Approaches And Their Application Examples From Sweden:

Systems Approaches and Their Application Mats-Olov Olsson,Gunnar Sjöstedt,2004-09-20 This book describes the application of systems thinking across a broad field of cases representing research teaching decision support and construction All cases are presented by experts who have actually been involved in the activities they describe The broad selection of cases captures the great variation of systems thinking and how it is integrated into models and theories and solid knowledge pertaining to different substantive areas

Systems Approaches and Their Application Mats-Olov Olsson,Gunnar Sjöstedt,2006-01-16 This book describes the application of systems thinking across a broad field of cases representing research teaching decision support and construction All cases are presented by experts who have actually been involved in the activities they describe The broad selection of cases captures the great variation of systems thinking and how it is integrated into models and theories and solid knowledge pertaining to different substantive areas

Systems Approaches and Their Application Mats-Olov Olsson,Gunnar Sjöstedt,2008-09-10 Within a conceptual framework that is developed in the two first chapters the actual application of systems thinking is described across a broad field of cases representing research teaching decision support and construction All cases are presented by experts who have actually been involved in the activities they describe Thus the broad selection of cases captures the great variation of systems thinking and how it is integrated into models and theories and solid knowledge pertaining to different substantive areas At the same time all case study authors address the same set of questions that are developed in the conceptual chapters This gives comparability across cases chapters and brings cohesion to the book The focus on Sweden an advanced country in systems thinking reinforces the unitary context in which comparison can be made between a systems approach for better research theory better practice and better design and construction Most recent literature on systems thinking has a general often philosophical perspective concerns computer systems or focuses on one highly specific problem A special feature of this book is that while it concerns a single nation it simultaneously contains a broad overview of systems analysis in a number of important issue areas for research as well as practice against a penetrating background description of what systems analysis is how it functions what problems it represents and what results it may produce The book is intended for a broad readership and can be appreciated by experts on systems thinking and analysis as well as by students teachers researchers planners and policy makers who want to learn more about this topic The book should be useful in university teaching in several disciplines

A System Perspective on Energy End-Use Measures in a District Heated Region Stefan Blomqvist, 2019-06-04 A district heating and cooling DHC system can be a viable piece of the puzzle in the efforts of reducing the greenhouse gas GHG emissions Especially if the DHC system include combined heat and power CHP plants which enable electricity production from renewable resources This is set forth in national energy targets and sustainable development goals SDGs adopted by the United Nations in 2015 Moreover improved energy efficiency and energy savings are important factors in fulfilling the national targets of decreased energy intensity as well as reducing the use of fossil fuels The aim of this thesis is to analyze the impacts of two energy end use measures in a DHC network and their consequences on the efforts towards sustainable development The end use measures studied are 1 renovation of a multifamily building stock and 2 the use of a hydronic pavement system HPS including analysis of different control strategies The end use measures are assessed in terms of energy use and efficiency use of renewable and fossil resources and local and global GHG emissions Lastly it is analyzed how the results relate to national energy targets and SDGs By using simulation and optimization models several scenarios of end use measures are analyzed in the two studies In the first study six scenarios are analyzed as the renovation packages include measures on the envelope ventilation and conversion from district heating to ground source heat pump In the second study three scenarios are analyzed where the HPS are operated all time at a temperature below 4 C or are shut down at temperatures below 10 C or at temperatures below 5 C The results of the study regarding the renovation of a multifamily building stock indicate a future reduction in heat demand All scenarios show energy savings of the studied building which ranged from 11% to 56% All scenarios show a reduction in local GHG emissions as well as reduced fossil fuel use Although the largest reduction was found in the use of renewable resources From a global perspective on GHG emissions the scenarios with district heating out performed measures with heat pump solutions in the studied system Moreover the study point to positive impacts on the efforts towards SDGs To mitigate the reduced heat demand from the renovation of the building stock an HPS may be used The results show mostly renewable resources were used for the HPS The use of HPS was found to generate a positive impact on global GHG emissions A control strategy that shuts down the HPS at temperatures below 10 C would result in 10% energy saving and would maintain acceptable performance of the HPS Furthermore it would reduce the use of fossil fuel and reduce local GHG emissions by 25% Moreover an HPS may contribute to SDGs It is concluded that energy end use measures of renovating a multifamily building stock are vital in the work towards an improved energy intensity However these measures result in a decreased demand for heat in the DHC network This can then lead to reduced

electricity production from renewable resources in the CHP plants which in turn have a negative impact on the global GHG emissions. By finding new applications like HPS the infrastructure of DHC networks could be utilized efficiently and serve as one piece of the puzzle that is the efforts towards sustainable development. Ett fjärrvärme och fjärrkylens tverkan kan vara en viktig del i arbetet att minska växthusgasutsläppen. Speciellt det att fjärrvärme och fjärrkylens tverkan nyttjar kraftvärmekraft vilket möjliggör elproduktion från förnybara resurser. Detta efterfrågas i de nationella energimålen och i de globala målen för hållbar utveckling. Den kallade Agenda 2030 som antogs av Förenta Nationerna 2015. Dessutom förbättrad energieffektivitet och energibesparing viktiga faktorer för att nå de nationella energimålen för minskad energiintensitet. Syftet med denna avhandling är att analysera effekterna av två användningsområden i ett fjärrvärme och fjärrkylens tverkan samt dess konsekvenser för en hållbar utveckling. De två områden som undersöks är 1. renovering av ett flerbostadshusbestånd och 2. användningen av ett markvärmesystem. Användningsområdena analyseras utifrån energianvändning och energibesparing användning av förnybara och fossila resurser samt lokala och globala växthusgasutsläpp. Slutligen analyseras hur resultaten relaterar till nationella energimålen och de globala målen för hållbar utveckling. Genom att använda simuleringar och optimeringsmodeller analyseras flera scenarier av användningsområden i de två studierna. I den första studien analyseras sex scenarier för renoveringsområdena innehåller klimatskåp och ventilationsområden samt ett byte av värmesystem från fjärrvärme till värmepump. I den andra studien analyseras tre scenarier. Ett för markvärmesystemet drivs kontinuerligt vid en utomhustemperatur under 4 °C samt det systemet även stängs av eller förs till i viloläge vid utomhustemperaturer under 10 °C respektive 5 °C. Resultaten från den första studien pekar på ett minskat värmehövd i framtiden. Alla scenarierna innebär energibesparingar i den studerade byggnaden som varierade från 11% till 56%. Alla scenarier uppvisade en minskning av lokala växthusgasutsläpp samt minskning av fossil bränsleanvändning. Dock ses den största minskningen i användandet av förnybara resurser. I ett globalt perspektiv på växthusgasutsläpp presterar värmesystemen med fjärrvärme bättre än de med värmepump i de studerade systemen. Studien uppvisar positiva effekter på de nationella målen samt de globala målen för hållbar utveckling. För att nå den minskade värmehövd kan ett markvärmesystem nyttjas. Resultaten visar att för mest förnybara resurser används. Användningen av markvärmekraft har en positiv inverkan på globala växthusgasutsläpp och en kontrollstrategi som förstärker markvärmesystemet i vila vid temperaturer under 10 °C kan resultera i 10% energibesparing samtidigt som en acceptabel prestanda bibehålls. Detta minskar den fossila bränsleanvändningen samt de lokala växthusgasutsläppen med 25%. Ett markvärmesystem kan bidra i arbetet med de nationella målen samt de globala målen för en hållbar utveckling. Slutsatsen är att renovering av ett bestånd av flerbostadshus ska genomföras i arbetet för en minskad energiintensitet. Dessa två områden leder emellertid till en minskad efterfrågan på värmekraft. Detta kan minska elproduktion från förnybara resurser i kraftvärmeanläggningarna vilket i sin tur har en negativ inverkan på de globala växthusgasutsläppen. Genom att hitta nya applikationer som markvärmekraft kan infrastrukturen i fjärrvärme och fjärrkylens tverkan nyttjas effektivt fortsättningsvis och fungera som en bit i pusslet för en hållbar utveckling.

Rainfed Farming Systems Philip

Tow,Ian Cooper,Ian Partridge,Colin Birch,2011-09-16 While a good grasp of the many separate aspects of agriculture is important it is equally essential for all those involved in agriculture to understand the functioning of the farming system as a whole and how it can be best managed It is necessary to re assess and understand rain fed farming systems around the world and to find ways to improve the selection design and operation of such systems for long term productivity profitability and sustainability The components of the system must operate together efficiently yet many of the relationships and interactions are not clearly understood Appreciation of these matters and how they are affected by external influences or inputs are important for decision making and for achieving desirable outcomes for the farm as a whole This book analyses common rain fed farming systems and defines the principles and practices important to their effective functioning and management

Bioenergy - Realizing the Potential Dr. Semida Silveira,2005-07-14 Modern bioenergy has gained increased attention in the past decade Not only does it provide an effective option for the provision of energy services from the technical point of view but it is based on resources that can be utilized on a sustainable basis all around the globe In addition the benefits accrued go beyond energy provision creating unique opportunities for regional development Today biomass is seen as one of the most promising renewable sources of modern energy services in the medium term Know how and experiences from different countries pave the way to further development of bioenergy systems Bioenergy Realising the Potential integrates the key technical policy and economic issues surrounding bioenergy projects in industrialised and developing countries with a critical focus on four major topics The biomass resource availability and potential The institutions and markets development Technical and economic enhancements Successful examples from Europe and developing countries System

Innovation for Sustainability 1 Arnold Tukker,Martin Charter,Carlo Vezzoli,Eivind Stø,Maj Munch Andersen,2017-09-08 Sustainable consumption and production SCP was adopted as a priority area during the World Summit on Sustainable Development in Johannesburg in 2002 and has since become one of the main vehicles for targeting international sustainability policy Sustainable consumption focuses on formulating equitable strategies that foster the highest quality of

life the efficient use of natural resources and the effective satisfaction of human needs while simultaneously promoting equitable social development economic competitiveness and technological innovation But this is a complex topic and as the challenges of sustainability grow larger there is a need to re imagine how SCP policies can be formulated governed and implemented The EU funded project Sustainable Consumption Research Exchanges SCORE consists of around 200 experts in the field of sustainable innovation and sustainable consumption The SCORE philosophy is that innovation in SCP policy can be achieved only if experts that understand business development sustainable solution design consumer behaviour and system innovation policy work together in shaping it Sustainable technology design can be effective only if business can profitably make the products and consumers are attracted to them To understand how this might effectively happen the expertise of systems thinkers must be added to the mix System Innovation for Sustainability 1 is the first result of a unique positive confrontation between experts from all four communities It examines what SCP is and what it could be provides a state of the art review on the governance of change in SCP policy and looks at the strengths and weaknesses of current approaches The SCORE experts are working with actors in industry consumer groups and eco labelling organisations in the key consumption areas of mobility food and agriculture and energy use and housing responsible for 70% of the life cycle environmental impacts of Western societies with the aim of stimulating fostering or forcing change to SCP theory in practice The System Innovation for Sustainability series will continue with three further volumes of comprehensive case studies in each of these three critical consumption areas Each chapter of this book examines problems and suggests solutions from a business design consumer and system innovation perspective It primarily examines the differing solutions necessary in the consumer economies of the West but also comments on the differing needs in rapidly emerging economies such as China as well as base of the pyramid economies The System Innovation for Sustainability series is the fruit of the only major international research network on SCP and will set the standard in this field for some years to come It will be required reading for all involved in the policy debate on sustainable production and consumption from government business academia and NGOs for designers scientists businesses and system innovators

Life Cycle Assessment Handbook Mary Ann Curran, 2012-10-08 The first book of its kind the Life Cycle Assessment Handbook A Guide for Environmentally Sustainable Products will become an invaluable resource for environmentally progressive manufacturers and suppliers product and process designers executives and managers and government officials who want to learn about this essential component of environmental sustainability As the last several decades have seen a dramatic rise in the application of Life Cycle Assessment LCA in decision making the interest in the life cycle concept as an environmental management and sustainability tool continues to grow The LCA Handbook offers a look at the role that life cycle information in the hands of companies governments and consumers may have in improving the environmental performance of products and technologies It concisely and clearly presents the various aspects of LCA in order to help the reader better understand the subject The content of the

book was designed with a certain flow in mind After a high level overview to describe current views and state of the practice of LCA it presents chapters that address specific LCA methodological issues including creating life cycle inventory life cycle impact assessment and capturing eco systems services These are followed by example applications of LCA in the agri food industry sustainable supply chain management solid waste management mining and mineral extraction forest products buildings product innovation and sustainable chemistry and engineering The international success of the sustainability paradigm needs the participation of many stakeholders including citizens corporations academia and NGOs The handbook links LCA and responsible decision making and how the life cycle concept is a critical element in environmental sustainability It covers issues such as building capacity in developing countries and emerging economies so that they are more capable of harnessing the potential in LCA for sustainable development Governments play a very important role with the leverage they have through procurement regulation international treaties tax incentives public outreach and other policy tools This compilation points to the clear trend for incorporating life cycle information into the design and development processes for products and policies just as quality and safety concerns are now addressed throughout product design and development
