System-Theoretical Modelling in Surface

Water Hydrology Alexander Lattermann, 2012-12-06 Modelling of hydrological rainfall runoff processes is facilitated by the application of the systemtheoretical approach to linear nonlinear and stochastic models To this purpose the variables involved in methods for determining areal precipitation and baseflow separation are discussed The convolution theorem in the theory of linear systems and the mathematical transform technique Laplace Z transformation are used to identify characteristics of the watershed and simulate hydrological processes To support the calculation of model output functions computer programs are included in the text This volume is suitable as a text for hydrology courses at universities or engineering academies

Chassis Handbook Bernhard Heißing, Metin Ersoy, 2010-11-09 In spite of all the assistance offered by electronic control systems the latest generation of passenger car chassis still relies on conventional chassis elements With a view towards driving dynamics this book examines these conventional elements and their interaction with mechatronic systems First it describes the fundamentals and design of the chassis and goes on to examine driving dynamics with a particularly practical focus This is followed by a detailed description and explanation of the modern components A separate section is devoted to the axles and processes for axle development With its revised illustrations and several updates in the text and list of references this new edition already includes a number of improvements over the first edition

Dynamics of

Fibre Formation and Processing Roland Beyreuther, Harald Brünig, 2006-11-23 This practice oriented book deals with the modelling of steady state and non steady state basic processes of fibre formation and fibre processing Focal points are melt spinning processes spun yarn spinning processes and the description of the dynamics in different process steps during the fibre processing A special chapter deals with dynamics of tensile force and its importance for the process stability All examples are based on industrial practice

Transmission of Information by Orthogonal Functions Henning F. Harmuth, 2013-04-17 The orthogonality of functions has been exploited in communications since its very beginning. Conscious and 1 extensive use was made of it by KOTEL NIKOV in theoretical work in 1947. Ten years later a considerable number of people were working in this field rather independently. However little experimental use could be made of the theoretical results before the arrival of solid state operational amplifiers and integrated circuits. A theory of communication based on orthogonal functions could have been published many years ago. However the only useful examples of orthogonal functions at that time were sine cosine functions and block pulses and this made the theory appear to be a complicated way to derive known results. It was again the advance of semiconductor technology that produced the first really new useful example of orthogonal functions the little known Walsh functions. In this book emphasis is placed on the Walsh functions since ample literature is available on sine cosine functions as well as on block pulses and pulses derived from them.
