The Cognitive Neuroscience Of Consciousness Cognition Special Issue:

The Cognitive Neuroscience of Consciousness Stanislas Dehaene, 2001 Empirical and theoretical foundations of a cognitive neuroscience of consciousness **Cognitive Neuroscience of Consciousness** Anil Seth, Geraint Rees, 2013-05-13

How do conscious experience subjectivity and free will arise from the brain and the body Even in the late 20th century consciousness was considered to be beyond the reach of science Now understanding the neural mechanisms underlying consciousness is recognized as a key objective for 21st century science The cognitive neuroscience of consciousness is a fundamentally multidisciplinary enterprise involving powerful new combinations of functional brain imaging computational modelling theoretical innovation and basic neurobiology Its progress will be marked by new insights not only into the complex brain mechanisms underlying consciousness but also by novel clinical approaches to a wide range of neurological and psychiatric disorders These innovations are well represented by the contents of the present volume A target article by Victor Lamme puts forward the contentious position that neural evidence should trump evidence from behaviour and introspection in any theory of consciousness This article and its several commentaries advance one of the fundamental debates in consciousness science namely whether there exists non reportable phenomenal consciousness perhaps dependent on local rather than global neural processes Other articles explore the wider terrain of the new science of consciousness For example Maniscalco and colleagues use theta burst transcranial magnetic stimulation to selectively impair metacognitive awareness Massimini and coworkers examine changes in functional connectivity during anesthesia and Vanhaudenhuyse et al describe innovations in detecting residual awareness following traumatic brain injury Together then contents of this volume exemplify the grand challenge of consciousness in combining transformative questions about the human condition with a tractable programme of experimental and theoretical research , **Mind as Machine** Margaret A. Boden, 2006

Cognitive science is among the most fascinating intellectual achievements of the modern era The quest to understand the mind is an ancient one But modern science has offered new insights and techniques that have revolutionized this enquiry Oxford University Press now presents a masterly history of the field told by one of its most eminent practitioners Psychology is the thematic heart of cognitive science which aims to understand human and animal minds But its core theoretical ideas are drawn from cybernetics and artificial intelligence and many cognitive scientists try to build functioning models of how the mind works In that sense Margaret Boden suggests its key insight is that mind is a very special machine Because the mind has many different aspects the field is highly interdisciplinary It integrates psychology not only with cybernetics AI but also with neuroscience and clinical neurology with the philosophy of mind language and logic with linguistic work on grammar semantics and communication with anthropological studies of cultures and with biological and A Life research on animal behaviour evolution and life itself Each of these disciplines in its own way asks what the mind is what it does how it works how it develops and how it is even possible Boden traces the key questions back to Descartes s revolutionary writings

and to the ideas of his followers and his radical critics through the eighteenth and nineteenth centuries Her story shows how controversies in the development of experimental physiology neurophysiology psychology evolutionary biology embryology and logic are still relevant today Then she guides the reader through the complex interlinked paths along which the study of mind developed in the twentieth century Cognitive science covers all mental phenomena not just cognition knowledge but also emotion personality psychopathology social communication religion motor action and consciousness In each area Boden introduces the key ideas and researchers and discusses those philosophical critics who see cognitive science as fundamentally misguided And she sketches the waves of resistance and acceptance on the part of the media and general public showing how these have affected the development of the field No one else could tell this story as Boden can she has been a member of the cognitive science community since the late 1950s and has known many of its key figures personally Her narrative is written in a lively swift moving style enriched by the personal touch of someone who knows the story at first hand Her history looks forward as well as back besides asking how state of the art research compares with the hopes of the early pioneers she identifies the most promising current work Mind as Machine will be a rich resource for anyone working on the mind in any academic discipline who wants to know how our understanding of mental capacities has advanced over the years

Seven Views of Mind Lise Wallach, Michael A. Wallach, 2012 This book describes seven major views of mind dualism and six alternatives to dualism that have been developed by psychologists philosophers and neuroscientists Written in relatively non technical language it helps the student understand the complexities in our various views of the human mind

Objects and Attention Brian J. Scholl, 2002 An overview of object based models of attention *The Map and the Territory* Shyam Wuppuluri, Francisco Antonio Doria, 2018-02-13 This volume presents essays by pioneering thinkers including Tyler Burge Gregory Chaitin Daniel Dennett Barry Mazur Nicholas Humphrey John Searle and Ian Stewart Together they illuminate the Map Territory Distinction that underlies at the foundation of the scientific method thought and the very reality itself It is imperative to distinguish Map from the Territory while analyzing any subject but we often mistake map for the territory Meaning for the Reference Computational tool for what it computes Representations are handy and tempting that we often end up committing the category error of over marrying the representation with what is represented so much so that the distinction between the former and the latter is lost This error that has its roots in the pedagogy often generates a plethora of paradoxes confusions which hinder the proper understanding of the subject What are wave functions Fields Forces Numbers Sets Classes Operators Functions Alphabets and Sentences Are they a part of our map theory representation Or do they actually belong to the territory Reality Researcher like a cartographer clothes or creates the reality by stitching multitudes of maps that simultaneously co exist A simple apple for example can be analyzed from several viewpoints beginning with evolution and biology all the way down its microscopic quantum mechanical components Is there a reality or a real apple out there apart from these maps How do these various maps interact intermingle with each other to

produce a coherent reality that we interact with Or do they not Does our brain uses its own internal maps to facilitate physicist mathematician in us to construct the maps about the external territories in turn If so what is the nature of these internal maps Are there meta maps Evolution definitely fences our perception and thereby our ability to construct maps revealing to us only those aspects beneficial for our survival But the question is to what extent Is there a way out of the metaphorical Platonic cave erected around us by the nature While Map is not the territory as Alfred Korzybski remarked join us in this journey to know more while we inquire on the nature and the reality of the maps which try to map the reality out there The book also includes a foreword by Sir Roger Penrose and an afterword by Dagfinn Føllesdal

Artificial General Intelligence, 2008 Pei Wang, Ben Goertzel, Stan Franklin, 2008 Includes full length papers short position statements and also the papers presented in the post conference workshop on the sociocultural ethical and futurological implications of Artificial General Intelligence AGI

The Cognitive Humanities Peter Garratt, 2016-11-23 This book identifies the cognitive humanities with new approaches to literature and culture that engage with recent theories of the embodied mind in cognitive science If cognition should be approached less as a matter of internal representation a Cartesian inner theatre than as a form of embodied action how might cultural representation be rethought What can literature and culture reveal or challenge about embodied minds The essays in this book ask what new directions in the humanities open up when the thinking self is understood as a participant in contexts of action even as extended beyond the skin Building on cognitive literary studies but engaging much more extensively with 4E cognitive science embodied embedded enactive extended than previously the book uses case studies from many different historical settings such as early modern theatre and digital technologies and in different media narrative art performance to explore the embodied mind through culture

Bio-Inspired Information Pathways Martin Ziegler, Thomas Mussenbrock, Hermann Kohlstedt, 2023-09-19 This open access book offers a timely and comprehensive review of the field of neurotronics Gathering cutting edge contributions from neuroscientists biologists psychologists as well as physicists microelectronics engineers and information scientists it gives extensive information on fundamental information pathways in selected nervous systems It also highlights their relevance as building blocks for novel computing architectures such as bio inspired electronic devices neuromorphic architectures memristive devices adaptive sensors and emergent pulsed coupled oscillatory networks All in all this book offers a unique bridge between fundamental research in neuroscience neural information processing nonlinear dynamics and self organization and advanced practical applications concerning the fabrication of hardware oriented computing
