

INTELLECTUAL DEVELOPMENT

Intellectual development refers to the complex process through which humans acquire the ability to manipulate, use, and communicate knowledge.

DEFINITION

The earliest developmental theories were rooted in biology, believing that genetics dictated human intellect. They focused on 'nature' rather than nurture in explaining intellectual development. However, social psychologists in the 20th Century increasingly argued that environmental factors such as parenting, education, and culture also shape intellectual outcomes.

KEY THEORIES

Different theories have their own ideas about how intellect develops. Key theories include:

- Cognitive Development Theory (Piaget)
- Psychoanalytic Theory (Freud)
- Psychosocial Theory (Erikson)
- Attachment Theory (Bowlby)
- Sociocultural Theory (Vygotsky)

T. S. Eliot

Ts Eliot's Intellectual And Poetic Development 1909-1922:

T.S. Eliot's Intellectual and Poetic Development, 1909-1922 Piers Gray, 1982 An intellectual biography of Eliot focusing upon the development of his mind as interpreted by the author and thus to a degree speculative though substantiated by Eliot's own words *Poems 1909-1925* T. S. Eliot, 2007-03 This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book without typos from the publisher. Not indexed. Not illustrated. 1902 Excerpt earth's radius of moon or other body P moon's horizontal parallax earth's angular semidiameter as seen from the moon f moon's angular semidiameter Now P in circular measure r r in circular measure r P or radius of earth radius of moon moon's parallax moon's semidiameter Examples 1 Taking the moon's horizontal parallax as 57 and its angular diameter as 32 find its radius in miles assuming the earth's radius to be 4000 miles Here moon's semidiameter 16 4000 57 16 r 400 16 1123 miles 2 The sun's horizontal parallax being 88 and his angular diameter 32' find his diameter in miles A_m 872 727 miles 3 The synodic period of Venus being 584 days find the angle gained in each minute of time on the earth round the sun as centre A_m 1 54 per minute 4 Find the angular velocity with which Venus crosses the sun's disc assuming the distances of Venus and the earth from the sun are as 7 to 10 as given by Bode's Law Since fig 50 $S V V A$ 7 3 But S_r has a relative angular velocity round the sun of 1 54 per minute see Example 3 therefore the relative angular velocity of $A V$ round A is greater than this in the ratio of 7 3 which gives an approximate result of 3 6 per minute the true rate being about 4 per minute Annual Parallax 95 We have already seen that no displacement of the observer due to a change of position on the earth's surface could apparently affect the direction of a fixed star. However as the earth in its annual motion describes an orbit of about 92 million miles radius round the sun the different positions in space from which an observer views the fixed stars from time to time throughout the year must be separated **Poems 1909-1925 - Primary Source Edition** Professor T.
