Social Experiments in Practice: The What, Why, When, Where, and How of Experimental Design and Analysis Laura R. Peck,2017-01-10

This issue considers social experiments in practice and how recent advances improve their value and potential applications Although controversial it is clear they are here to stay and are in fact increasing With their greater abundance experimental evaluations have stretched to address more diverse policy questions no longer simply providing a treatment control contrast but adding multiarm multistage and multidimensional factorial designs and analytic extensions to expose more about what

works best for whom Social experiments are also putting programs under the microscope when they are most ready for testing enhancing the policy value of their findings This volume provides new developments in all these areas from scholars instrumental to recent scientific advances In some instances established ideas are given new attention connecting them to new opportunities to learn and inform policy By all means this issue aims to encourage stronger and more informative social experiments in the future This is the 152nd issue in the New Directions for Evaluation series from Jossey Bass It is an official publication of the American Evaluation Association

Handbook on Crime and Delinquency Prevention Elmer Hubert Johnson, 1987-04-21 The Handbook clearly points out that although the literature on crime prevention is voluminous the social conditions that invoke criminality are resistant to social change The articles repeatedly demand a critical evaluation of prevention theories and programs and call for accountability within the crime prevention profession The collection will serve as a valuable resource for policymakers and practitioners as well as for academics The volume includes an excellent directory of crime delinquency prevention organizations and a supplementary bibliography Choice In recent years the idea of prevention as a means of controlling crime has gained unprecedented popularity Advocates of crime prevention frequently see its proactive nature to be superior to the reactive stance of typical law enforcement Yet major questions continue to arise about what prevention is how it can be carried out to whom it should be directed and where it can best be implemented Elmer E Johnson has drawn together a variety of perspectives in an effort to provide an integrated analysis of fundamental concepts relating to the preventive approach

Maredia, Assessing impacts of public investments has long captured the interest and attention of the development community This paper presents the evolution of different methods and approaches used for ex ante appraisal monitoring project evaluation and impact assessment over the last five decades Among these tools impact assessment IA conducted retrospectively comes closest to providing the proof of development effectiveness It is defined as the systematic analysis of the significant or lasting changes in people's lives brought about by a given action or series of actions in relation to a counterfactual There are three basic types of retrospective IAs macro level IAs that focus on the contribution of developmental efforts to an impact goal aggregated at a sector or a system level micro level impact evaluations IEs concerned with estimating the average effect of an intervention on outcomes at the beneficiary level and micro level ex post impact analysis concerned with total effects of a development effort after the outputs are scaled up Ex post IAs have evolved and expanded over the decades in both breadth and depth of analysis in response to evolving development themes and methodological advancements The increased emphasis on learning from evaluations has also seen responses from both quantitative and qualitative camps of the evaluation community The paper argues that generation of robust knowledge that feeds into making developmental policies and investment decisions requires a hierarchical and cumulative approach to improving the proof through rigorous and a variety of impact assessment

methods applied incrementally at the project program and system level Subjecting as many development interventions as resources allow to rigorous impact assessment based on a common framework can help build a critical body of evidence on impacts of development interventions which can then be subjected to meta analyses to help assimilate results across different studies and build a knowledge base on what works and what does not
