## **Social Interaction In Individual Development:**

**Social Interaction in Individual Development** Willem Doise, Augusto Palmonari, 2010 This volume explores the psychological development of the individual from both ethological and sociological viewpoints

**Social Interactions in Individual Development** Willem Doise, Augusto Palmonari, 1984

**Social and Cognitive Development in the Context of Individual, Social, and Cultural Processes** Janette Benson, Catherine Raeff, 2004-06 Several recent analyses have focused on how social and cultural factors shape development but less well understood are the individual constructive processes involved in this interplay This volume showcases varied theoretical and empirical approaches to how individual social and cultural factors shape development and suggests new directions for future scholarship

**Social Interaction and the Development of Knowledge** Jeremy I.M. Carpendale, Ulrich M ller, 2014-04-04 Written by highly respected theorists in psychology and philosophy the chapters in this book explicate and address fundamental epistemological issues involved in the problem of the relationship between the individual and the collective Different theoretical viewpoints are presented on this relationship as well as between the nature of rationality and morality relativism and universalism and enculturation and internalization Many chapters also highlight similarities and differences between these alternative frameworks and Piaget s theory and thus correct the misperception that Piaget had nothing to say about the social dimension of development Other chapters focus on the implications of these debates for the important topic areas of pedagogy moral development and the development of social understanding in infancy and childhood Although Piaget s theory is presented and evaluated by some of the chapters in this collection the authors remain critical and do not shy away from revising or extending Piaget s theory whenever it is deemed necessary Though the topic covered in this book is of fundamental importance in the social sciences it is rarely addressed in a sustained way as it is in this collection of chapters The book benefits social scientists interested in fundamental epistemological issues especially as these concern the relationship between the individual and the collective with implications for the conceptualization of morality and rationality

**Social Interaction in Animals: Linking Experimental Approach and Social Network Analysis** Cédric Sueur, Frédéric Mery, 2017-03-14 Understanding the link between individual behaviour and population organization and functioning has long been central to ecology and evolutionary biology Behaviour is a response to intrinsic and extrinsic factors including individual state ecological factors or social interactions Within a group each individual can be seen as part of a network of social interactions varying in strength type and dynamic The structure of this network can deeply impact the ecology and evolution of individuals populations and species Within a group social interactions can take many forms and may significantly affect an individual s fitness These interactions may result in complex systems at the group level such as in the case of collective decisions to migrate to build nest or to forage Among them social transmission of information has been studied mostly in vertebrates fish birds and mammals including humans In insects social learning has been unambiguously

demonstrated in social Hymenoptera but this probably reflects limited research effort and recent evidence show that even non eusocial insects such as *Drosophila* cockroaches and crickets can copy the behaviour of others Compared to individual learning which requires a trial and error period every generation social learning can potentially result in the stable transmission of behaviours across generations leading to cultural traditions in some species The study of the processes which may facilitate or prevent this transmission and the analyses of the relationship between social network structure and efficiency of social transmission became these recent years an emerging and promising field of research The goal of this research topic is to present the genetic and socio environmental factors affecting social interaction and information or pathogen transmission with the integration of experimental approaches social network analyses and modelling Importantly we aim to understand whether a relationship between social network structures and dynamics can reflect the efficiency of social transmission i e can we use social network analysis to predict the social transmission of information or of pathogen collective decision making and ultimately the evolutionary trajectory of a group
