## **Social Process Of Scientific Investigation:**

**The Social Process of Scientific Investigation** W.R. Knorr, R. Krohn, Richard P. Whitley, 2012-12-06 practice some of which is translated into the standard forms of public discourse in publication and then retranslated by readers and adapted again to local practice at self selected other sites Less may be left implicit and additional personal and contextual information is carried by the informal methods of communication which mediate local projects and international publication But both methods of communication are screens as well as conduits of information History and Background of the Volume When the planning of this volume began in the spring of 1977 it seemed a natural part of the mandate for the Yearbook There had also been a number of more specific calls for deeper studies of research in social and historical context 3 These calls can be seen as giving permission and legitimacy to ask questions otherwise seen as irrelevant or even disrespectful and as attempts to develop new perspectives from which to ask and to answer them The implied and expressed irreverence toward traditions and institutions of great respect may have prolonged this process of initial apologetics In any case in May 1977 the theme of The Social Process of Scientific Investigation was proposed to the Editorial Board for Volume IV as the heart of the subject That is the ethnographic and detailed historical study of actual scientific activity and thinking at or close to the work site

*The Politics and Rhetoric of Scientific Method* J. Schuster, R.R. Yeo, 2012-12-06 The institutionalization of History and Philosophy of Science as a distinct field of scholarly endeavour began comparatively early though not always under that name in the Australasian region An initial lecturing appointment was made at the University of Melbourne immediately after the Second World War in 1946 and other appointments followed as the subject underwent an expansion during the 1950s and 1960s similar to that which took place in other parts of the world Today there are major Departments at the University of Melbourne the University of New South Wales and the University of Wollongong and smaller groups active in many other parts of Australia and in New Zealand Australasian Studies in History and Philosophy of Science aims to provide a distinctive publication outlet for Australian and New Zealand scholars working in the general area of history philosophy and social studies of science Each volume comprises a group of essays on a connected theme edited by an Australian or a New Zealander with special expertise in that particular area Papers address general issues however rather than local ones parochial topics are avoided Further more though in each volume a majority of the contributors is from Australia or New Zealand contributions from elsewhere are by no means ruled out Quite the reverse in fact they are actively encouraged wherever appropriate to the balance of the volume in question

**Integrating Knowledge Through Interdisciplinary Research** Dominic Holland, 2013-08-22 In this important new text Holland seeks to explain by means of social scientific and philosophical inquiry the difficulties that researchers often experience when attempting to integrate knowledge from different academic disciplines either individually or as part of a team of subject specialists It is argued that the difficulty of integrating knowledge from different academic disciplines is the result of firstly an inadequate justification of the nature of

scientific integration and differentiation and secondly the dominance of disciplinary specialization in scientific inquiry By focusing on both the theoretical justification for and the practical feasibility of integrating knowledge through interdisciplinary research this book asks what properties of reality make the integration of knowledge from different academic disciplines possible and to what extent it is feasible to integrate knowledge through interdisciplinary research within a traditional disciplinary context Accordingly the text is both philosophical and social scientific in content philosophical in the sense that it presents a theory of causal determination which will help researchers to understand how reality is both differentiated and interconnected social scientific in the sense that it presents the results of three case studies of collaborative interdisciplinary research projects The book is heavily informed by the philosophy of critical realism The philosophical argument about the possibility of integration and specialization in science draws explicitly on some of the key concepts of critical realism particularly those comprising the theory of integrative pluralism while critical realist assumptions underpin the social scientific argument about the causal influence of the social system of knowledge production By exploring researchers conceptions of knowledge and of reality on the one hand and their decisions about what sort of knowledge to produce on the other Holland shows how the difficulty of scientific integration is both a problem of knowledge and a problem of knowledge production This book is essential reading for students and academics interested in the emerging topic of knowledge integration and interdisciplinarity The Manufacture of Knowledge K.D. Knorr-Cetina, 2013-10-22 The anthropological approach is the central focus of this study Laboratories are looked upon with the innocent eye of the traveller in exotic lands and the societies found in these places are observed with the objective yet compassionate eye of the visitor from a quite other cultural milieu There are many surprises that await us if we enter a laboratory in this frame of mind This study is a realistic enterprise an attempt to truly represent the social order of life in laboratories and institutes of research just as they are By bringing the philosophical issues to the surface as matters not of prejudgement but as matters of concern Karin Knorr Cetina has developed the first really positive challenge to the philosophy of science since the days of paradigms and internal definitions of meanings **Theory and Practice in the Interdisciplinary Production and Reproduction of Scientific Knowledge** Olga Pombo, Klaus Gärtner, Jorge Jesuino, 2023-01-10 This book addresses the urgent need for a large and systematic analysis of current interdisciplinary ID research and practice It demonstrates how ID is essentially a cognitive phenomenon something different from the frivolous and inconsequential attempt of trying to overcome the disciplinary competencies and exigencies By ID the authors show that it is a manifestation of the transversal rationality that underlies current scientific activity It is the very progress of specialized disciplines that requires interdisciplinary new research practices and new forms of articulation between domains something that has a strong impact on the traditional disciplinary structure of scientific and educational institutions Divided into two parts the book presents a conceptual framework as well as several case studies on ID practices The book aims at covering three main themes It contributes to the stabilization of ID

meaning and characterizes the main ID theorizations which have been proposed until now It builds an innovative and broad understanding of the several ID determinations as an essentially cognitive phenomenon and of its institutional implications at the level of disciplinary structures and curricular organization Finally it distinguishes and maps the diversity of ID procedures and practices which are being used and tested by contemporary scientific and educational institutions This book is addressed to philosophers scientists and every one interested in science production and reproduction including science teaching

The Literary Structure of Scientific Argument Peter Dear, 2015-08-12 In this volume seven historians of science examine the historical creation and meaning of a range of scientific textual forms from the seventeenth to the late nineteenth centuries They consider examples from the fields of chemistry medicine physics zoology physiology and mathematics exposing the rich possibilities for a new historically rooted approach to our scientific cultural heritage Peter Dear presents the case for taking texts seriously asking historians of science to confront issues and techniques moving to the forefront in a number of disciplines and asking literary scholars and literary minded intellectual historians not to put science quietly to one side or treat it as a mere source of cultural metaphors but to understand it in terms of historically specific textual construction The Literary Structure of Scientific Argument will interest historians philosophers and sociologists as well as literary scholars concerned with science

*The Economics of Science* James R Wible, 2003-09-02 Science is difficult and costly to do well This study systematically creates an economics of science Many aspects of science are explored from an economic point of view The scientist is treated as an economically rational individual This book begins with economic models of misconduct in science and the legitimate normal practices of science moving on to market failure the market place of ideas self correctiveness and the organizational and institutional structures of science An exploration of broader methodological themes raised by an economics of science ends the work

*Integrating Scientific Disciplines* William Bechtel, 2012-12-06 Interdisciplinary research has been a popular idea with many people in the last 20 years Academic administrators have admonished their faculty to become more interdisciplinary Students often request the chance to pursue an interdisciplinary degree While the issue of managing interdisciplinary projects has received a fair amount of attention by those interested in science management interdisciplinary research has received little attention from historians philosophers or sociologists of science or from scientists themselves Yet there are a number of cases within the life sciences where researchers have been actively engaged in endeavors that take them across disciplinary boundaries These are ripe for investigation by those interested in the process of science To provide an in depth study of some historical or contemporary cases of cross disciplinary research activity in the life sciences a conference was held at Georgia State University in May 1984 This conference was supported by the National Endowment for the Humanities U S A through their research conference program Over a three day period historians philosophers and researchers who were actively engaged in various of the life sciences discussed specific examples of interdisciplinary research and tried to analyze what was needed for successful crossing of

disciplinary boundaries After the conference each of the participants revised their original presentations partly in light of the discussion at the conference The papers in this volume are the fruits of that endeavor *Methods of Critical Discourse Analysis* Ruth Wodak, Michael Meyer, 2001 The authors introduce the various theories methods and applications associated with the sociolinguistic approach known as critical discourse analysis The authors assume no previous knowledge of the subject

**Policy Analysis in Turkey** Güneş Ertan, Caner Bakır, 2018-06-06 This volume provides the first comprehensive overview of the state of policy analysis in Turkey for an international audience Noting Turkey's traditionally strong highly centralised state the book documents the evolution of policy analysis in the country providing an in depth review of the context constraints and dominant modes of policy analysis performed by both state and non state actors The book examines the role of committees experts international actors bureaucrats as well as public opinion in shaping policy analysis in the country through their varying ideas interests and resources In doing so it presents the complex decision making mechanisms that vary significantly among policy making actors and institutions documenting the key yet unexamined aspects of policy analysis in Turkey It will be a valuable resource for those studying policy analysis within Turkey and as a comparison with other volumes in the International Library of Policy Analysis Series

**Psychoanalysis, Scientific Method and Philosophy** Sydney Hook, 2020-02-18 This by now well known pioneering dialogue on Freudian analysis is concerned not with therapeutic implications individual or social of psychoanalysis or of any other brand of psychology but solely with the status of psychoanalysis as a scientific theory Matching talents with a distinguished group of philosophers and social scientists psychoanalysts made their claims and willingly subject them to the

methodological scrutiny common to the sciences and the philosophy of science This book records one of the few times in the United States that a distinguished group of psychoanalysts met with an equally distinguished group of philosophers of science in a free critical interchange of view on the scientific status of the field While a sense of the event's excitement is captured here it also had clear results such as an expanded notion of psychoanalysis as a scientific theory and a clear realization that certain elements in psychoanalysis are substantially beyond the boundaries of causal inference or the rules of logic Two opening statements by Heinz Hartmann and Ernest Nagel set the tone for the debate and discussion that followed These are followed by social scientific statements of Abram Kardiner Ernest van den Haag and Alex Inkeles followed by the philosophers Morris Lazerowitz Donald C Williams and Anthony Flew Such distinguished scholars as Adolf Grunbaum Michael Scriven Gail Kennedy Arthur Pap Philipp Frank Arthur C Danto Max Black and others round out this pioneering effort in the literature of intellectual combat Sidney Hook applies to his vision of psychoanalysis the same compelling rigor he applied to other would be advocates of a science beyond ordinary scientific method or safeguards He nonetheless points out that even therapeutic success is not the last word but must itself be tested on a variety of measures statistical no less than analytical This remains a courageous and disturbing work one that commands attention among practicing psychiatrists psychoanalysts and their would be patients

**The Economics of Scientific Misconduct** James R. Wible, 2022-08-18 The Economics of Scientific Misconduct explores episodes of misconduct in the natural and biomedical sciences and replication failure in economics and psychology over the past half century Here scientific misconduct is considered from the perspective of a single discipline such as economics likely for the first time in intellectual history Research misconduct has become an important concern across many natural medical and social sciences including economics over the past half century Initially a mainstream economic approach to science and scientific misconduct draws from conventional microeconomics and the theories of Becker Ehrlich and C S Peirce's economy of research Then the works of Peirce and Thorstein Veblen from the 19th century point toward contemporary debates over statistical inference in econometrics and the failure of recent macroeconomic models In more contemporary economics clashes regarding discrimination and harassment have led to a Code of Professional Conduct from the American Economic Association and a Code of Ethics from one of its members The last chapter considers research ethics matters related to the COVID 19 pandemic There has been an explosion of research and some retractions More generally a concern with research ethics contributes to scientific progress by making some of its most difficult problems more transparent and understandable and thus possibly more surmountable This book offers valuable insights for students and scholars of research ethics across the sciences philosophy of science and social science and economic theory
