Calculus and Analytic Geometry Philip Gillett, 1984 **Commutative Algebra, Volume II** Oscar Zariski, Pierre Samuel, 2019-11-13 The second text in this two book series extends the classical material of Volume I which focuses on field theory and the ideal theory of Noetherian rings and Dedekind domains The connection of Volume II's material to algebraic geometry is stressed throughout the presentation making this book a practical introduction to some basic concepts and the arithmetical foundations of algebraic geometry The opening chapter deals with properties of places and is followed by a chapter that explores the classical properties of polynomial and power series rings and their applications to algebraic geometry The final chapter examines the theory of local rings which provides the algebraic basis for the local study of algebraic and analytical varieties Several helpful Appendixes conclude the text Calculus and Analytic Geometry George Brinton Thomas (Jr.), Ross L. Finney, 1988 Student text chiefly problems and exercises **Commutative Algebra, Volume I** Oscar Zariski, Pierre Samuel, 2019-11-13 A precise fundamental study of commutative algebra this largely self contained treatment is the first in a two volume set Intended for advanced undergraduates and graduate students in mathematics its prerequisites are the rudiments of set theory and linear algebra including matrices and determinants The opening chapter develops introductory notions concerning groups rings fields polynomial rings and vector spaces Subsequent chapters feature an exposition of field theory and classical material concerning ideals and modules in arbitrary commutative rings including detailed studies of direct sum decompositions The final two chapters explore Noetherian rings and Dedekind domains This work prepares readers for the more advanced topics of Volume II which include valuation theory polynomial and power series rings and local algebra **Mathematics Magazine**, 1981 **Engineering Education**, 1986

Polozhii,2014-07-10 Pure and Applied Mathematics Volume 79 The Method of Summary Representation for Numerical Solution of Problems of Mathematical Physics presents the numerical solution of two dimensional and three dimensional boundary value problems of mathematical physics This book focuses on the second order and fourth order linear differential equations Organized into two chapters this volume begins with an overview of ordinary finite difference equations and the general solutions of certain specific finite difference equations This text then examines the various methods of successive approximation that are used exclusively for solving finite difference equations This book discusses as well the established formula of summary representation for certain finite difference operators that are associated with partial differential equations of mathematical physics The final chapter deals with the formula of summary representation to enable the researcher to write the solution of the corresponding systems of linear algebraic equations in a simple form This book is a valuable resource for mathematicians and physicists      *Subject Guide to Books in Print* ,1971

**Electrolyte Solutions** R.A. Robinson,R.H. Smith,2016-03-22 By the year 1900 most of physics seemed to be encompassed in the two great theories of Newtonian mechanics and Maxwell s theory of electromagnetism Unfortunately there were inconsistencies between the two theories that seemed irreconcilable Although many physicists struggled with the problem it took the genius of Einstein to see that the inconsistencies were concerned not merely with mechanics and electromagnetism but with our most elementary ideas of space and time In the special theory of relativity Einstein resolved these difficulties and profoundly altered our conception of the physical universe Readers looking for a concise well written explanation of one of the most important theories in modern physics need search no further than this lucid undergraduate level text Replete with examples that make it especially suitable for self study the book assumes only a knowledge of algebra Topics include classical relativity and the relativity postulate time dilation the twin paradox momentum and energy particles of zero mass electric and magnetic fields and forces and more      **Lapses in Mathematical Reasoning** V.
