Yates, 2012-12-06 In this book I have attempted to evaluate critically the very large literature which has accumulated in the area of biofeedback over the past 10 15 years As might be expected in any area of psychology with clinical possibilities the literature divides itself into two main categories fundamental research studies and therapeutic studies It is now apparent that the clinical applications of biofeedback have far outstripped their fundamental research bases with the inevitable result that the initial wave of enthusiasm may be replaced with an unnecessarily severe skepticism Either extreme position is unjustified Biofeedback does represent an important new approach to the elucidation of the role played by internal systems in the adjustment of the organism to its environment But its potential will only be revealed if its use in practice is soundly based on fundamental research There are promising signs that this is being realized so that there is cause for optimism Aubrey J Yates Perth Australia A Note on the References With the exception of no more than two or three papers all the references in this book have been obtained and read However many of them were published in journals which will not be readily accessible to the reader who may be interested in consulting more directly particular articles which attract his attention Autonomic Regulations, Their Significance for Physiology, Psychology and Neuropsychiatry Ernst Gellhorn, 1943 **Cumulated Index Medicus**, 1968 *Directory of Published Proceedings*, 1999 Sleep Disorders Medicine Sudhansu Chokroverty, 2009 Dr Sudhansu Chokroverty a world recognized expert in sleep medicine presents the third edition of Sleep Disorders Medicine for the latest developments in this rapidly expanding specialty with coverage of neuroscience and clinical application In
