Some Improperly Posed Problems Of Math:

Some Improperly Posed Problems of Mathematical Physics Michail M. Lavrentiev,1967-02-01 This monograph deals with the problems of mathematical physics which are improperly posed in the sense of Hadamard The first part covers various approaches to the formulation of improperly posed problems These approaches are illustrated by the example of the classical improperly posed Cauchy problem for the Laplace equation The second part deals with a number of problems of analytic continuations of analytic and harmonic functions The third part is concerned with the investigation of the so called inverse problems for differential equations in which it is required to determine a dif ferential equation from a certain family of its solutions Novosibirsk June 1967 M M LAVRENTIEV Table of Contents Chapter I Formu1ation of some Improperly Posed Problems of Mathematic al Physics 1 Improperly Posed Problems in Metric Spaces 2 A Probability Approach to Improperly Posed Problems 8 Chapter II Analytic Continuation 1 Analytic Continuation of a Function of One Complex Variable from a Part of the Boundary of the Region of Regularity 13 2 The Cauchy Problem for the Laplace Equation 18 3 Determination of an Analytic Function from its Values on a Set Inside the Domain of Regularity 22 4 Analytic Continuation of a Function of Two Real Variables 32 5 Analytic Continuation of Harmonic Functions from a Circle 38 6 Analytic Continuation of Harmonic Function with Cylin drical Symmetry 42 Chapter III Inverse Problems for Differential Equations 1 The Inverse Problem for a Newtonian Potential   Some Improperly Posed Problems of Mathematical Physics Mikhail Mikhaĭlovich Lavrentʹev,1967 Based largely on Tourg e s actual experiences in Greensboro North Carolina during Reconstruction this is the fictional story of Comfort Servosse a man of French Canadian descent who joins the Civil War on the Union side then returns home after the war and resolves to move his family to the South He purchases a decayed plantation called Warrington in Rockford County the state to which he moves is never identified He makes a name for himself as a radical Yankee or carpetbagger and arouses the hostility of the neighbors in the community The rest of the story follows his increasing involvement on the behalf of former slaves in the community and his opposition to the activities of the Ku Klux Klan There are several digressions and conversations in which Servosse his friends and even the narrator discuss the numerous problems facing the South during the time of reconstruction and blaming some of the violence and trouble in the South on Washington s unwillingness to step in where required   **Improperly Posed Problems in Partial Differential Equations** L. E. Payne,1975-01-01 Improperly posed Cauchy problems are the primary topics in this discussion which assumes that the geometry and coefficients of the equations are known precisely Appropriate references are made to other classes of improperly posed problems The contents include straight forward examples of methods eigenfunction quasireversibility logarithmic convexity Lagrange identity and weighted energy used in treating improperly posed Cauchy problems The Cauchy problem for a class of second order operator equations is examined as is the question of determining explicit stability inequalities for solving the Cauchy problem for elliptic equations Among other things an example with improperly posed perturbed and unperturbed problems is

discussed and concavity methods are used to investigate finite escape time for classes of operator equations   *Some Improperly Posed Problems of Mathematical Physics* Robert J. Sacker,1967   Non-Standard and Improperly Posed Problems William F. Ames,Brian Straughan,1997-07-07 Written by two international experts in the field this book is the first unified survey of the advances made in the last 15 years on key non standard and improperly posed problems for partial differential equations This reference for mathematicians scientists and engineers provides an overview of the methodology typically used to study improperly posed problems It focuses on structural stability the continuous dependence of solutions on the initial conditions and the modeling equations and on problems for which data are only prescribed on part of the boundary The book addresses continuous dependence on initial time and spatial geometry and on modeling backward and forward in time It covers non standard or non characteristic problems such as the sideways problem for a heat or hyberbolic equation and the Cauchy problem for the Laplace equation and other elliptic equations The text also presents other relevant improperly posed problems including the uniqueness and continuous dependence for singular equations the spatial decay in improperly posed parabolicproblems the uniqueness for the backward in time Navier Stokes equations on an unbounded domain the improperly posed problems for dusty gases the linear thermoelasticity and the overcoming Holder continuity and image restoration Provides the first unified survey of the advances made in the last 15 years in the field Includes an up to date compendium of the mathematical literature on these topics   *Inverse Problems in the Mathematical Sciences* Charles W. Groetsch,2013-12-14 Classical applied mathematics is dominated by the Laplacian paradigm of known causes evolving continuously into uniquely determined effects The classical direct problem is then to find the unique effect of a given cause by using the appropriate law of evolution It is therefore no surprise that traditional teaching in mathema tics and the natural sciences emphasizes the point of view that problems have a solution this solution is unique and the solution is insensitive to small changes in the problem Such problems are called well posed and they typically arise from the so called direct problems of natural science The demands of science and technology have recently brought to the fore many problems that are inverse to the classical direct problems that is problems which may be interpreted as finding the cause of a given effect or finding the law of evolution given the cause and effect Included among such problems are many questions of remote sensing or indirect measurement such as the determination of internal characteristics of an inaccessible region from measurements on its boundary the determination of system parameters from input output measurements and the reconstruction of past events from measurements of the present state Inverse problems of this type are often ill posed in the sense that distinct causes can account for the same effect and small changes in a perceived effect can correspond to very large changes in a given cause Very frequently such inverse problems are modeled by integral equations of the first kind   **Approximate Global Convergence and Adaptivity for Coefficient Inverse Problems** Larisa Beilina,Michael Victor Klibanov,2012-03-09 Approximate Global Convergence and Adaptivity for Coefficient Inverse Problems is the first book in which two new concepts

of numerical solutions of multidimensional Coefficient Inverse Problems CIPs for a hyperbolic Partial Differential Equation PDE are presented Approximate Global Convergence and the Adaptive Finite Element Method adaptivity for brevity Two central questions for CIPs are addressed How to obtain a good approximations for the exact solution without any knowledge of a small neighborhood of this solution and how to refine it given the approximation The book also combines analytical convergence results with recipes for various numerical implementations of developed algorithms The developed technique is applied to two types of blind experimental data which are collected both in a laboratory and in the field The result for the blind backscattering experimental data collected in the field addresses a real world problem of imaging of shallow explosives
