

# Curve Fitting

- Fit the best curve to a discrete data set and obtain estimates for other data points
- Two general approaches:
  - *Data exhibit a significant degree of scatter*  
Find a single curve that represents the general trend of the data.
  - *Data is very precise*. Pass a curve(s) exactly through each of the points.

- Two common applications in engineering:

*Trend analysis*. Predicting values of dependent variable: *extrapolation* beyond data points or *interpolation* between data points.

*Hypothesis testing*. Comparing existing mathematical model with measured data.
