Applied Spatial Statistics for Public Health Data Lance A. Waller, Carol A. Gotway, 2004-07-29 While mapped data provide a common ground for discussions between the public the media regulatory agencies and public health researchers the analysis of spatially referenced data has experienced a phenomenal growth over the last two decades thanks in part to the development of geographical information systems GISs This is the first thorough overview to integrate spatial statistics with data management and the display

capabilities of GIS It describes methods for assessing the likelihood of observed patterns and quantifying the link between exposures and outcomes in spatially correlated data This introductory text is designed to serve as both an introduction for the novice and a reference for practitioners in the field Requires only minimal background in public health and only some knowledge of statistics through multiple regression Touches upon some advanced topics such as random effects hierarchical models and spatial point processes but does not require prior exposure Includes lavish use of figures illustrations throughout the volume as well as analyses of several data sets in the form of data breaks Exercises based on data analyses reinforce concepts

Cromley, Sara McLafferty, 2012-01-01 Authoritative and comprehensive this is the leading text and professional resource on using geographic information systems GIS to analyze and address public health problems Basic GIS concepts and tools are explained including ways to access and manage spatial databases The book presents state of the art methods for mapping and analyzing data on population health events risk factors and health services and for incorporating

geographical knowledge into planning and policy Numerous maps diagrams and real world applications are featured The companion Web page provides lab exercises with data that can be downloaded for individual or course use New to This Edition Incorporates major technological advances such as Internet based mapping systems and the rise of data from cell phones and other GPS enabled devices Chapter on health disparities Expanded coverage of public participation GIS Companion Web page has all new content Goes beyond the United States to encompass an international focus **Placing History** Anne Kelly Knowles, Amy Hillier, 2008 CD ROM contains Four Microsoft PowerPoint presentations and interactive mapping exercises some of which extend the scholarly material and addresses new issues related to historical GIS

Spatial Information and the Environment Peter Halls, 2003-09-02 There is considerable current academic interest in the interface between geographical information systems GIS and the environment This new monograph explores the process from start to finish It begins with information acquisition in the environment and moves on to tool and techniques for manipulating the information visualisation and navigation methods for exploring it and computation and modelling techniques for its analysis It then concludes with a survey of decision support for its application Spatial Information and the Environment is the eighth book in the Innovations in GIS series initiated in 1994 The series is in essence derived from a selection of the presentations made at the annual GIS Research UK conference 2000 held in York and has now changed its focus by concentrating on a single topic making each text distinctive *Interoperating Geographic Information Systems* Michael Goodchild, Max J. Egenhofer, Robin Fegeas, Cliff Kottman, 2012-12-06 Geographic information systems have developed rapidly in the past decade and are now a major class of software with applications that include infrastructure maintenance resource management agriculture Earth science and planning But a lack of standards has led to a general inability for one GIS to interoperate with another It is difficult for one GIS to share data with another or for people trained on one system to adapt easily to the commands and user interface of another Failure to interoperate is a problem at many levels ranging from the purely technical to the semantic and the institutional Interoperating Geographic Information Systems is about efforts to improve the ability of GISs to interoperate and has been assembled through a collaboration between academic researchers and the software vendor community under the auspices of the US National Center for Geographic Information and Analysis and the Open GIS Consortium Inc It includes chapters on the basic principles and the various conceptual frameworks that the research community has developed to think about the problem Other chapters review a wide range of applications and the experiences of the authors in trying to achieve interoperability at a practical level Interoperability opens enormous potential for new ways of using GIS and new mechanisms for exchanging data and these are covered in chapters on information marketplaces with special reference to geographic information Institutional arrangements are also likely to be profoundly affected by the trend towards interoperable systems and nowhere is the impact of interoperability more likely to cause fundamental change than in education as educators address the needs of a new generation of GIS users with access to a new

generation of tools The book concludes with a series of chapters on education and institutional change Interoperating Geographic Information Systems is suitable as a secondary text for graduate level courses in computer science geography spatial databases and interoperability and as a reference for researchers and practitioners in industry commerce and government
