**The Bonded Electrical Resistance Strain Gage** William M. Murray, William R. Miller, 1992-04-30 Experimental stress analysis is an important tool in the overall design and development of machinery and structures While analytical techniques and computer solutions are available during the design stage the results are still dependent on many assumptions that must be made in order to adapt them to the problems at hand One popular method of finding structural and design weaknesses is through the use of the electrical resistance strain gage These devices are relatively low in cost easily applied by a reasonably skilled technician and require little investment in instrumentation for the general user yet they yield a wealth of information in a relatively short time period The information and its validity is of course dependent on the training and knowledge of the engineer who plans the tests and reduces the data In addition to serving as a reference for engineers this practical instructive book has a high potential as a textbook for senior and first year graduate students in engineering and related fields such as engineering physics and geology A solutions manual is available to instructors using the book as a text To request a free copy of the manual please write Peter Gordon Engineering Editor Oxford University Press 198 Madison Avenue New York NY 10016

**IUTAM Symposium on Advanced Optical Methods and Applications in Solid Mechanics** Alexis Lagarde, 2006-04-11 The request to organize under its patronage at Poitiers in 1998 a Symposium entitled Advanced Optical Methods and Applications in Solid Mechanics by the International Union of Theoretical and Applied Mechanics I U T A M was well received for the following two reasons First for nearly 20 years no Symposium devoted to optical methods in solids had been organized Second recent advances in digital image processing provided many new applications which are described in the following We have the honour to present here the proceedings of this Symposium st th The Symposium took place from august 31 to September 4 at the Institut International de la Prospective in Futuroscope near Poitiers A significant number of internationally renowned specialists had expressed their wish to participate in this meeting The Scientific Committee proposed 16 general conferences and selected 33 regular lectures and 17 poster presentations Papers corresponding to posters are not differentiated in the proceedings from those that were presented orally It is worth noting that a total of 80 participants representing 16 countries registered for this symposium The Scientific Committee deserves praise for attracting a significant number of young scientists both as authors and as participants Let us add our warm acknowledgements to Professor J W Dally and to Professor A S Kobayashi who throughout the symposium preparation time brought us valuable help
