Stranded In The Present:

Stranded in the Present Peter Fritzsche, 2010-04-10 In this inventive book Peter Fritzsche explores how Europeans and Americans saw themselves in the drama of history how they took possession of a past thought to be slipping away and how they generated countless stories about the sorrowful eventful paths they chose to follow In the aftermath of the French Revolution contemporaries saw themselves as occupants of an utterly new period Increasingly disconnected from an irretrievable past worried about an unknown and dangerous future they described themselves as indisputably modern To be cast in the new time of the nineteenth century was to recognize the weird shapes of historical change to see landscapes scattered with ruins and to mourn the remains of a bygone era Tracing the scars of history writers and painters revolutionaries and exiles soldiers and widows and ordinary home dwellers took a passionate even flamboyant interest in the past They argued politics wrote diaries devoured memoirs and collected antiques all the time charting their private paths against the tremors of public life These nostalgic histories take place on battlefields trampled by Napoleon along bucolic English hedges against the fairytale silhouettes of the Grimms beloved Germany and in the newly constructed parlors of America's western territories This eloquent book takes a surprising completely original look at the modern age our possessions our heritage and our newly considered selves

In the Meantime Adeline Masquelier, Deborah Durham, 2023-03-10 The meantime represents the gap between what is past and the unknown future When considered as waiting the meantime is defined as a period of suspension to be endured By contrast the contributors of this volume understand it as a space of the possible where calculation coexists with uncertainty promises with disappointment and imminence with deferral Attending to the temporalities of emerging rather than settled facts they put the stress on the temporal tactics social commitments material connections dispositional orientations and affective circuits that emerge in the meantime even in the most desperate times

Earth's Enemy a Satire on the Present from the Future Barry C. Kent, 2013-05-13 Earth's Enemy is a fiction about future changes in the way humans live In this incredible culture humans have evolved a new technology society and ideology The changes were gradual and keyed to both a major decrease in population and a seemingly impossible alteration of the economy The setting is a century and a half from now and takes place largely in the area formerly called the United States Due to an unfortunate loss of most books and electronic storage devices much of history no longer exists Jack a psychologist has volunteered to explain the new culture to a number of humans from the turn of the 20th century who had undergone cryonics and are now being revived During these sessions Jack discovers many strange things about the past which the people of his time have forgotten Likewise few of the

cryons are able to cope with the new culture to which Jack is introducing them In one way or another each of them is disappointed by the paucity of technological inventions Most are outraged or dismayed by the disappearance of so many things which they thought were an essential part of their way of life No more newspapers competitive sports nursing homes new music fossil fuel air travel space programs banks courtrooms prisons money multitudes of religions and only one language are generally unacceptable or incomprehensible to the cryons All of them seem pleased to learn that there is no more war crime poverty bigotry overpopulation or environmental pollution However when they discover the ridiculous changes in economy which have made the new way of life possible most of the cryons are willing to fight for a return to their old way of life *Federal Energy Regulatory Commission Reports United States. Koneman, 2006 Long considered the definitive work in its field this new edition presents all the principles and practices readers need for a solid grounding in all aspects of clinical microbiology bacteriology mycology parasitology and virology Tests are presented according to the Clinical and Laboratory Standards Institute formerly NCCLS format This extensively revised edition includes practical guidelines for cost effective clinically relevant evaluation of clinical specimens including extent of workup and abbreviated identification schemes New chapters cover the increasingly important areas of immunologic and molecular diagnosis Clinical correlations link microorganisms to specific disease states Over 600 color plates depict salient identification features of organisms *Plant Breeding: Past, Present and Future* John E. Bradshaw, 2016-03-08 This book aims to help plant breeders by reviewing past achievements currently successful practices and emerging methods and techniques Theoretical considerations are also presented to strike the right balance between being as simple as possible but as complex as necessary The United Nations predicts that the global human population will continue rising to 9 0 billion by 2050 World food production will need to increase between 70 100 per cent in just 40 years First generation bio fuels are also using crops and cropland to produce energy rather than food In addition land area used for agriculture may remain static or even decrease as a result of degradation and climate change despite more land being theoretically available unless crops can be bred which tolerate associated abiotic stresses Lastly it is unlikely that steps can be taken to mitigate all of the climate change predicted to occur by 2050 and beyond and hence adaptation of farming systems and crop production will be required to reduce predicted negative effects on yields that will occur without crop adaptation Substantial progress will therefore be required in bridging the yield gap between what is currently achieved per unit of land and what should be possible in future with the best farming methods and best storage and transportation of food given the availability of suitably adapted cultivars including adaptation to climate change My book is divided into four parts Part I is an historical introduction Part II deals with the origin of genetic variation by mutation and recombination of DNA Part III explains how the mating system of a crop species determines the genetic structure of its landraces Part IV considers the three complementary options for future progress use of sexual reproduction in further conventional breeding base
