**AIDS Narratives** Steven F. Kruger, 2013-10-28 This is the first book length study of the rich fiction that has emerged  
from the AIDS crisis Examining first the ways in which scientific discourse on AIDS has reflected ideologies of gender and  
sexuality such as the construction of AIDS as a disease of gay men part of a battle over masculinity and thus largely  
excluding women with AIDS from public attention the book considers how such discourses have shaped narrative  
understandings of AIDS On the one hand AIDS is seen as an invariably fatal weakening of an individual's bodily defenses a  
depiction often used to reconfirm an identification between disease and a weak and vulnerable gayness On the other hand  
AIDS is understood in terms of an epidemic attributable to gay immorality or unnaturalness The fiction of AIDS depends upon  
these two narratives with one major subgenre of AIDS novel presenting narratives of personal illness decline and death and a  
second focusing on epidemic spread These novels also question the narrative structures upon which they depend intervening  
particularly against the homophobia of those structures though also sometimes reinforcing it      *HIV in World Cultures*  
Gustavo Subero, 2016-04-22 This book analyses the way that HIV AIDS is often narrativised and represented in contemporary  
world cultures as well as the different strategies of remembrance deployed by different sub cultural groups affected by the  
illness Through a close study of a variety of cultural texts including cinema literature theatre art and photography amongst  
others it demonstrates the trajectory that such narratives and representations have undergone since the advent of the  
discovery of the disease in the 1980s Acknowledging the central yet often overlooked role that cultural products have played  
in the construction of public opinion towards the condition itself and those who suffer it this ground breaking volume focuses

on a variety of narratives as well as strategies of coping with HIV AIDS that have emerged across the globe Bringing together research on the UK North and South America Africa and China it provides rich textual analyses of the ways in which the HIV positive body has been portrayed in contemporary culture with attention to the differences between specific national contexts whilst keeping in view a space of commonality amongst the different experiences reflected in such texts As such it will be of interest to social scientists and scholars of cultural and media studies concerned with cultural production and representations of the body and sickness *Tangled Memories* Marita Sturken,1997-02-28 On American cultural memory
