Synthesis and Characterization of Advanced Materials, 1984 **Advanced Materials** Mahendra U. Gaikwad, Arpana Parihar, Raju Khan, 2024-12-06
Advanced materials are engineered to exhibit novel properties that confer superior performance in comparison with conventional materials. The performance of advanced materials is associated with toughness, hardness, and durability that can be used for high technological applications such as semiconductors, biomaterials, smart materials, or nanomaterials. *Advanced Materials: Production, Characterization, and Multidisciplinary Applications* is focused on novel approaches for production of graphene and other 2D materials along with characterization techniques, discussing a wide range of applications in multidisciplinary areas of science and engineering. It provides a guiding light in the production, synthesis, and characterization of advanced materials by implementing appropriate techniques. The book has a multidisciplinary approach covering applications in electronics, sensors, engineering, biotechnology, medical, e.g., cancer treatment, drug delivery, cellular imaging, and biomedical smart implants, drug delivery, and DIY health testing kits fields. The authors cover the primary information of advanced and other 2D materials related to their production or synthesis via various methods ranging from conventional to non-conventional such as lithography, photolithography, computer chips, electron beam lithography, etching, atomic layer deposition, chemical vapor deposition, hydrothermal process, and electrospinning along with some comparative investigations. It also covers a comparison study over the current and future perspectives of advanced and other 2D materials. This book is aimed at researchers, academics, and professionals who are interested in understanding the novel approaches for synthesis of advanced materials.
