Synthesis And Chemistry Of Agrochemicals Iii:

Synthesis and Chemistry of Agrochemicals III Don R. Baker, 1992 Covers the discovery development and optimization of new agrochemicals Discusses new structures new synthesis strategies and structure activity relationships of agrochemicals for plant control insect acarid and nematode control and fungal disease control Also examines many of the toxicological problems encountered during development of new agrochemicals Case histories describe the discovery and development of specific agrochemicals Presents material and information that previously has only partially appeared in the patent literature

Synthesis and Chemistry of Agrochemicals II Don R. Baker, 1991 This new volume explores the science of agricultural chemistry with studies covering the entire spectrum of herbicides plant growth regulators insecticides insect pheromones acaricides and agricultural fungicides Its two primary objectives are to provide chemists with integrated accounts of agrochemical discovery synthesis and development and to offer coherent updates on the current state of the discipline The 46 chapters of this volume are divided into four sections covering sulfonylurea herbicides other weed and plant control methods control of insects acarids and nematodes and control of fungi

Fluorine and the Environment: Agrochemicals, Archaeology, Green Chemistry and Water, 2006-10-04 Advances in Fluorine Science is a new book series presenting critical multidisciplinary overviews on areas in which fluorine and fluoride compounds have a decisive impact The individual volumes of Advances in Fluorine Science are thematic addressing comprehensively both the science and applications on topics including the Environment Green chemistry Medicine Health Life Sciences New Technologies Materials Science Energy and the Earth Sciences In the present volume the key position of fluoro products in agriculture is reviewed since a large percentage of agro chemicals and pesticides contain at least one fluorine atom However improvements in the use of fluorine based products in agrochemicals cannot be developed without taking into consideration a safer environment on both levels of greener synthesis routes and a reduction of the negative impact on plants and organisms Within this scope fluorine has a very peculiar place since its high reactivity yields several advantages for instance in by passing various polluting multi step reactions Fluorine based materials are reviewed as efficient tools for protecting our cultural heritage Also using up to date techniques such as ion beam analysis this element can help relative dating applications ranging from burial durations of archaeological bones and teeth to the determination of exposure ages of meteorites on the Antarctic ice shield Providing an original approach of the complex relationships between chemistry and the environment Reviewing the key position of fluoro products in agriculture Multidisciplinary contributions from chemists geologists biologists environmentalists and industry staffs
