Synthetic Methods For Carbohydrates Acs Symposium Series 39:

Synthetic Methods for Carbohydrates Hassan Saad El Khadem, American Chemical Society. Division of Carbohydrate Chemistry, 1976 Current Catalog National Library of Medicine (U.S.), 1982 First multi year cumulation covers six years 1965-70 Essentials of Carbohydrate Chemistry John F. Robyt, 2012-12-06 Carbohydrates are the most widely distributed naturally occurring organic compounds on Earth. They make up much of our food, clothing, and shelter and are as vital to national economies as they are to our diet. This book is the first broad treatment of carbohydrate chemistry in many years and presents the structures, reactions, modifications, and properties of carbohydrates. Woven throughout the text are discussions of biological properties of carbohydrates, their industrial applications, and the history of the field of carbohydrate chemistry. Written for students as well as practicing scientists, this text/reference will be of interest to a wide range of disciplines influenced by carbohydrates: biochemistry, chemistry, food and nutrition, microbiology, pharmacology, and medicine.

Chemistry of the O-Glycosidic Bond A. F. Bochkov, G. E. Zaikov, 2016-04-19 Chemistry of the O glycosidic Bond Formation and Cleavage focuses on the compositions, characteristics, formation, and reactions of O glycosidic bonds, including the synthesis of oligosaccharides and polysaccharides. The publication first offers information on the characteristics and formation of O glycosidic bonds, as well as the Fischer, Koenigs, Knorr, orthoester, and oxazoline methods. The text also looks at the synthesis of oligosaccharides. Concerns include evaluation of methods of glycosylation from the oligosaccharide synthesis viewpoint, stepwise propagation of oligosaccharide chains, and synthesis of disaccharides and higher oligosaccharides. The manuscript analyzes the synthesis of polysaccharides, including polycondensation, cationic polymerization, and synthesis of branched polysaccharides from linear ones. The book also reviews miscellaneous glycoside synthesis and cleavage of O glycosidic bonds. Topics include synthesis of sugar anhydrides and aryl glycosides and acid-catalyzed hydrolysis. The text is a dependable reference for readers interested in O glycosidic bonds.

Publications and Patents - Eastern Regional Research Center United States. Agricultural Research Service. Eastern Regional Research Center, 1973 **Carbohydrate Chemistry** J. S. Brimacombe, 2007-10-31 Carbohydrate Chemistry provides review coverage of all publications relevant to the chemistry of monosaccharides and oligosaccharides in a given year. The amount of research in this field appearing in the organic chemical literature is increasing because of the enhanced importance of the subject, especially in areas of medicinal chemistry and biology. In no part of the field is this more apparent than in the synthesis of oligosaccharides required by scientists working in glycobiology, glycomedicinal chemistry, and its reliance on carbohydrate synthesis is now very well established, for example by the preparation of specific carbohydrate-based antigens, especially cancer-specific oligosaccharides and glycoconjugates. Coverage of topics such as nucleosides, amino sugars, alditols, and cyclitols also covers much research of relevance to biological and medicinal chemistry. Each volume of the series brings together references to all published work in given areas of the subject and serves as a comprehensive database for the active research chemist.

Specialist Periodical Reports provide systematic and detailed review coverage in major areas of chemical research Compiled by teams of leading authorities in the relevant subject areas the series creates a unique service for the active research chemist with regular in depth accounts of progress in particular fields of chemistry Subject coverage within different volumes of a given title is similar and publication is on an annual or biennial basis Modern Synthetic Methods in Carbohydrate Chemistry Daniel B. Werz, Sebastien Vidal, 2013-12-23 The fields of glycochemistry and glycoscience are rich and varied and where much can be learned from Nature As Nature is not always able to produce carbohydrates in quantities useful for not only in research but also as therapeutic agents new ways need to be found to optimize the yield This book presents an overview of the latest developments in the field of carbohydrates ranging from de novo approaches via cyclodextrin chemistry to the synthesis of such highly complex glycoconjugates as glycosphingolipids and GPI anchors The main emphasis remains on the synthetic aspects making the book an excellent source of information for those already involved in carbohydrate chemistry as well as for those organic chemists who are beginners in this field Equally of interest to synthetic chemists as well as medicinal chemists and biochemists **Symposium on the Pharmacological Effect of Lipids** Jon J. Kabara, 1978 **Carbohydrate Chemistry** Geert-Jan Boons, 1998 The chemistry and biochemistry of carbohydrates have become key research areas throughout the world Responding to the enormous interest expressed in these fields this new book has brought together a range of contributors each working at the forefront of carbohydrate chemistry and biochemistry to provide concise authoritative and timely review of these exciting areas Aimed at chemists biochemists and biologists the reader will find this book an invaluable introduction to and review of the most important developments in carbohydrate chemistry As a distinct chemical group the carbohydrates comprising mono oligo and polysaccharides and their derivatives are the most abundant group of natural products From simple monosaccharides produced in photosynthesis to polysaccharides built in complex biochemical reactions carbohydrates are produced in huge quantities by plant and animal life Apart from dietary and structural uses in plants and animals it is now well established that carbohydrates play a number of key roles in living systems From cell cell recognition to hormonal activities carbohydrates are implicated in a wide range of cellular processes This new understanding has forced the study of carbohydrates to the forefront of modern chemical research For example the nature of the role of carbohydrates in living systems offers the potential to provide important lead compounds in the development of new bioactive molecules Similarly the relative abundance of carbohydrates is prompting research aimed at utilizing simple monosaccharides as starting materials for a range of high value chemical product offering a renewable alternative to current starting materials **Publications and Patents** United States.
