detailed description available for World Databases in Geography and Geology **Thin-Walled Structures** J.Y. Richard Liew, V. Thevendran, N.E. Shanmugam, 1998-11-27 Thin plated structures are used extensively in building construction automobile aircraft shipbuilding and other industries because of a number of favourable factors such as high strength weight ratio development of new materials and processes and the availability of efficient analytical methods This class of structure is made by joining thin plates together at their edges and they rely for their rigidity and strength upon the tremendous stiffness and load carrying capacity of the flat plates from which they are made Many of the problems encountered in these structures arise because of the effects of local buckling The knowledge of various facets of this phenomenon has increased dramatically since the 1960s Problem areas which were hitherto either too complex for rigorous analysis or whose subtleties were not fully realized have in these years been subjected to intensive study Great advances have been made in the areas of inelastic buckling The growth in use of lightweight strong materials such as fibre reinforced plastics has also been a contributory factor towards the need for advances in the knowledge of the far post buckling range The conference is a sequel to the international conference organised by the University of Strathclyde in December 1996 and this international gathering will provide the opportunity for discussion of recent developments and trends in design of thin walled structures

Light-Weight Steel and Aluminium Structures P. Mäkeläinen, P. Hassinen, 1999-06-02 ICSAS 99 The Fourth International Conference on Steel and Aluminium Structures was a sequel to ICSAS 87 held in Cardiff UK to ICSAS 91 held in Singapore and to ICSAS 95 held in Istanbul Turkey The objective of the conference was to provide a forum for the discussion of recent findings and developments in the design and construction of various types of steel and aluminium structures The conference was concerned with the analysis modelling and design of light weight or slender structures in which the primary material is structural steel stainless or aluminium The structural analysis papers presented at the conference cover both static and dynamic behaviour instability behaviour and long term behaviour under hygrothermal effects The results of the latest research and development of some new structural products were also presented at the conference A total of 76 papers and 30 posters were presented at the conference by participants from 36 countries in all 6 continents *European Symposium on Computer Aided Process Engineering - 14* Ana Paula Barbosa-Póvoa, Henrique Matos, 2004-05-14 This book contains papers presented at the 14th European Symposium on Computer Aided Process Engineering ESCAPE 14 The ESCAPE symposia bring together scientists students and engineers from academia and industry who are active in the research and application of Computer Aided Process Engineering The objective of ESCAPE 14 is to highlight the use of

computers and information technology tools on five specific themes 1 Product and Process Design 2 Synthesis and Process Integration 3 Process Control and Analysis 4 Manufacturing Process Operations 5 New Challenges in CAPE Provides this year s comprehensive overview of the current state of affairs in the CAPE community Contains reports from the frontiers of science by the field s most respected scientists Special Keynote by Professor Roger Sargent Long Term Achievement CAPE Award winner

Non-Linear Static and Cyclic Analysis of Steel Frames with Semi-Rigid Connections Siu-Lai Chan,Pui-Tak Chui,2000-05-19 This book is devoted to the discussion and studies of simple and efficient numerical procedures for large deflection and elasto plastic analysis of steel frames under static and dynamic loading In chapter 1 the basic fundamental behaviour and philosophy for design of structural steel is discussed emphasising different modes of buckling and the inter relationship between different types of analysis In addition to this different levels of refinement for non linear analysis are described An introduction is also given to the well known P and P effects Chapter 2 presents the basic matrix method of analysis and gives several examples of linear analysis of semi rigid pointed frames It is evident from this that one must have a good understanding of first order linear analysis before handling a second order non linear analysis In chapter 3 the linearized bifurcation and second order large deflection are compared and the detailed procedure for a second order analysis based on the Newton Raphson scheme is described Chapter 4 introduces various solution schemes for tracing of post buckling equilibrium paths and the Minimum Residual Displacement control method with arc length load step control is employed for the post buckling analysis of two and three dimensional structures Chapter 5 addresses the non linear behaviour and modelling of semi rigid connections while several numerical functions for description of moment versus rotation curves of typical connection types are introduced The scope of the work in chapter 6 covers semi rigid connections and material yielding to the static analysis of steel frames Chapter 7 studies the cyclic response of steel frames with semi rigid joints and elastic material characteristics In the last chapter the combined effects of semi rigid connections and plastic hinges on steel frames under time dependent loads are studied using a simple springs in series model For computational effectiveness and efficiency the concentrated plastic hinge concept is used throughout these studies
