Grant, 2013-09-25 Plant Biosystematics is a compendium of papers from a symposium titled Plant Biosystematics Forty Years Later held in Montreal in July 1983 This collection reviews the current field of biosystematics particularly the evolution of natural biota and how plant biosystematics can contribute to the welfare of humans One paper reviews biosystematics compares new approaches and discusses the latest trend in comparative molecular evolution of genes One author discusses the cytology and biosystematics concerning the discontinuities and genetic independence occurring in the evolutionary process Another author discusses chromosome pairing in species and hybrids that includes models of chromosome pairing in diploids The text also describes chromosome banding and biosystematics as well as the problems of chromosome banding that should be addressed to in future research With estimates of the number of species being threatened with extinction numbering around 20 000 one paper address the issue of conservation and biosystematics The author suggests that more biological information should be published to avoid duplication of effort and possibly drive scientists to have their views more widely felt Agriculturists botanists conservationists environmentalists and researchers in the field of botany conservation and plant genealogy will find this book valuable **Plant Evolutionary Biology** L. Gottlieb, 2012-12-06 There are still heroes in science They are recognized because the issues and problems they chose to study became the issues and problems of a major field of research They are also recognized because their insights and solutions are the ones that are tested and evaluated when new ideas and technologies become available In the field of plant evolutionary biology the hero is George Ledyard Stebbins His first scientific publication appeared in 1929 and has been followed by nearly 60 magnificent years of seminal ideas proofs and proposals that defined much of what was worth doing in plant biosystematics evolution and biological conservation His energy enthusiasm and good humor widely shared at many congresses and symposia in the Singalongs with Stebbins made him a wonderful teacher for both undergraduates and graduate students He is the mentor of several generations of botanists plant geneticists and evolutionists A brief biography and publication list were included in Topics in Plant Population Biology edited by Otto T Solbrig Subodh Jain George Johnson and Peter Raven Columbia University Press 1979 which resulted from a symposium held on the occasion of Ledyard Stebbins 70th birthday In this volume population biology and physiological ecology received major attention particularly in relation to plant form and function
