Immersive Systemic Knowing Raghav Rajagopalan, 2020-10-16 This book advances systems thinking by introducing a new philosophy of systemic knowing It argues that there are inescapable limits to rational understanding Humankind has always depended on extended ways of knowing to complement the rational analytic approach The book establishes that the application of such methods is fundamental to systemic practice The author advocates embracing two modes of consciousness intentionality which Western philosophy has long recognized and non intentional awareness which Eastern

philosophy additionally highlights The simultaneity of these two modes of consciousness and the variety of knowings they spawn are harnessed for a more holistic systemic knowing Four practices from fields related to systems thinking are examined two contemporary action research methodologies from the US and the UK the Sumedhian Indian approach to inquiry about processes within groups and a technique of group psychotherapy originating in Eastern Europe Each of these systematically harnesses knowing using both modes of consciousness Therefore the author insists such approaches must be included in systemic practice in purposeful and methodical juxtaposition to rational analytic ways The book provides examples and guidelines for deployment All researchers and practitioners of systems thinking and action research must read this book Raghav has craftfully blended Eastern and Western wisdom He uses his immersion into Eastern ways of knowing practically to elaborate the systems philosophy in rich detail He has incorporated from cooperative inquiry as action research the idea of four ways of knowing practical propositional presentational and experiential to bolster the foundations of systems thinking SHANKAR SANKARAN Professor University of Technology Sydney Australia President International Society of Systems Sciences ISSS 2019 2020 This is a book with the potential to stimulate the emergence of a new paradigm Raghav shows that systems thinking can transcend rational analysis and incorporate other ways of knowing such as arts based methods also rather than be overly preoccupied with striving for change there is value in simply abiding which comes with a deep appreciation of the ecological relationships we are part of It s not that rational analysis is wrong it s that it is only part of a genuinely transformative practice GERALD MIDGLEY Co Director Centre for Systems Studies University of Hull former President ISSS 2013 14 Raghav Rajagopalan s writing on generating deep appreciation for the social and ecological interdependencies ties in closely with my own work The philosophical ideas he develops contain the tracings and essential tones of Gregory Bateson s idea of Mind as a process of living complexities reaching well beyond the notion of the body This book demonstrates outstanding erudition and deep compassion at the same time It should delight the adventurous reader unafraid of big questions NORA BATESON President of the International Bateson Institute

The Science of

Bureaucracy David Demortain, 2020-01-21 How the US Environmental Protection Agency designed the governance of risk and forged its legitimacy over the course of four decades The US Environmental Protection Agency was established in 1970 to protect the public health and environment administering and enforcing a range of statutes and programs Over four decades the EPA has been a risk bureaucracy formalizing many of the methods of the scientific governance of risk from quantitative risk assessment to risk ranking Demortain traces the creation of these methods for the governance of risk the controversies to which they responded and the controversies that they aroused in turn He discusses the professional networks in which they were conceived how they were used and how they served to legitimize the EPA Demortain argues that the EPA is structurally embedded in controversy resulting in constant reevaluation of its credibility and fueling the evolution of the knowledge and technologies it uses to produce decisions and to create a legitimate image of how and why it acts on the environment He describes the emergence and institutionalization of the risk assessment risk management framework codified in the National Research Council s Red Book and its subsequent unraveling as the agency s mission evolved toward environmental justice ecological restoration and sustainability and as controversies over determining risk gained vigor in the 1990s Through its rise and fall at the EPA risk decision making enshrines the science of a bureaucracy that learns how to make credible decisions and to reform itself amid constant conflicts about the environment risk and its own legitimacy
