A Systems Approach to Modeling Community Development Projects Bernard Amadei, 2015-09-14 This book makes the case for a systems approach to small scale community development projects It specifically looks at the application of one branch of systems science called system dynamics to develop conceptual models of small scale communities and address specific issues they might be facing at different scales A systems approach recognizes that by definition communities are complex adaptive systems consisting of multiple subsystems and parts e g individuals institutions and infrastructure that are interconnected driven by some purpose follow certain rules and interact with each other and with their surrounding environment In order to address community issues and problems complexity and uncertainty must be embraced and dealt with Inside the author emphasizes and shows how to include a system and complexity aware approach in the different phases of small scale community project management Adopting this approach comes with unique challenges such as dealing with ill defined problems considering uncertainty recognizing that no unique and best solutions to complex problems exist and accepting satisficing solutions The text demonstrates the need for community development practitioners to integrate in all stages of their projects participation systems thinking continuous reflection in action and a combination of critical and creative tools

Optimization and Artificial Intelligence in Civil and Structural Engineering B.H. Topping, 2013-03-14 This volume and its

companion volume includes the edited versions of the principal lectures and selected papers presented at the NATO Advanced Study Institute on Optimization and Decision Support Systems in Civil Engineering The Institute was held in the Department of Civil Engineering at Heriot Watt University Edinburgh from June 25th to July 6th 1989 and was attended by eighty participants from Universities and Research Institutes around the world A number of practising civil and structural engineers also attended The lectures and papers have been divided into two volumes to reflect the dual themes of the Institute namely Optimization and Decision Support Systems in Civil Engineering Planning for this ASI commenced in late 1986 when Andrew Templeman and I discussed developments in the use of the systems approach in civil engineering A little later it became clear that much of this approach could be realised through the use of knowledge based systems and artificial intelligence techniques Both Don Grierson and John Gero indicated at an early stage how important it would be to include knowledge based systems within the scope of the Institute The title of the Institute could have been Civil Engineering Systems as this would have reflected the range of systems applications to civil engineering problems considered by the Institute These volumes therefore reflect the full range of these problems including structural analysis and design water resources engineering geotechnical engineering transportation and environmental engineering
