Multi-Agent-Based Production Planning and Control Jie Zhang, 2017-05-09 At the crossroads of artificial intelligence manufacturing engineering operational research and industrial engineering and management multi agent based production planning and control is an intelligent and industrially crucial technology with increasing importance This book provides a complete overview of multi agent based methods for today's competitive manufacturing environment including the Job Shop Manufacturing and Reentrant Manufacturing processes In addition to the basic control and scheduling systems the author also highlights advance research in numerical optimization methods and wireless sensor networks and their impact on intelligent production planning and control system operation Enables students researchers and engineers to understand the fundamentals and

theories of multi agent based production planning and control Written by an author with more than 20 years experience in studying and formulating a complete theoretical system in production planning technologies Fully illustrated throughout the methods for production planning scheduling and controlling are presented using experiments numerical simulations and theoretical analysis Comprehensive and concise Multi Agent Based Production Planning and Control is aimed at the practicing engineer and graduate student in industrial engineering operational research and mechanical engineering It is also a handy guide for advanced students in artificial intelligence and computer engineering *Design of a period batch control planning system for cellular manufacturing* Jan Riezebos,2001 **Shop Floor Control Systems** A. Bauer,J. Browne,R. Bowden,J. Duggan,2012-12-06 In recent years there has been a tremendous upsurge of interest in manufacturing systems design and analysis Large industrial companies have realized that their manufacturing facilities can be a source of tremendous opportunity if managed well or a huge corporate liability if managed poorly In particular industrial managers have realized the potential of well designed and installed production planning and control systems Manufacturing in an environment of short product life cycles and increasing product diversity looks to techniques such as manufacturing resource planning Just In Time JIT and total quality control among others to meet the challenge Customers are demanding high quality products and very fast turn around on orders Manufacturing personnel are aware of the lead time from receipt of order to delivery of completed orders at the customer's premises It is clear that this production lead time is for the majority of manufacturing firms greatly in excess of the actual processing or manufacturing time There are many reasons for this among them poor coordination between the sales and manufacturing function Some are within the control of the manufacturing function Others are not Computer-Assisted Management and Control of Manufacturing Systems Spyros G. Tzafestas,2012-12-06 Modern manufacturing systems involve many processes and operations that can be monitored and controlled at several levels of intelligence At the highest level there is a computer that supervises the various manufacturing functions whereas at the lowest level there are stand alone computer controlled systems of manufacturing processes and robotic cells Until recently computer aided manufacturing systems constituted isolated islands of automation each oriented to a particular application but present day systems offer integrated approaches to manufacturing and enterprise operations These modern systems known as computer integrated manufacturing CIM systems can easily meet the current performance and manufacturing competitiveness requirements under strong environmental changes CIM systems are much of a challenge and imply a systemic approach to the design and operation of a manufacturing enterprise Actually a CIM system must take into account in a unified way the following three views the user view the technology view and the enterprise view This means that CIM includes both the engineering and enterprise planning and control activities as well as the information flow activities across all the stages of the system **Integrating Advanced Computer-Aided Design, Manufacturing, and Numerical Control: Principles and Implementations** Xu, Xun,2009-01-31 This book presents basic principles of
