Systems Of Nominal Classification:

Systems of Nominal Classification Gunter Senft, 2000-08-03 This book first published in 2000 addresses the fundamental linguistic question of how the perceived world is expressed through systems of nominal classification that are grammatically encoded in various languages A team of leading international scholars reviews the whole spectrum of nominal classification from gender systems through to numeral classifiers providing cutting edge theoretical interpretations and empirical case studies based on a wide range of languages The volume presents ideas about the problems of classification advances theory by proposing typological categories and clarifies the interface between anthropological and grammatical work Focusing on systems that have a conceptual semantic basis the contributors reflect and represent approaches in nominal classification research This invaluable reference work will appeal to linguists anthropologists and psychologists alike as well as specialists in languages as diverse as Australian Amazonian Mayan and Japanese **Explaining Language**

Structure Through Systems Interaction Zygmunt Frajzyngier, Erin Shay, 2003-01-01 This book proposes a framework for describing languages through the description of relationships among lexicon morphology syntax and phonology The framework is based on the notion of formal coding means the principle of functional transparency the notion of functional domains and the notion of systems interaction in the coding of functional domains The study is based on original analyses of cross linguistic data The fundamental finding of the study is that different languages may code different functional domains which must be discovered by analyzing the formal means available in each language The first part of the book proposes a methodology for discovering functional domains and the second part describes the properties of various functional domains The book presents new cross linguistic analyses of theoretical issues including agreement phenomena attributed to government nominal classification prerequisites for and implications of linear order coding and defining characteristics of lexical categories The study also contributes new analyses of specific problems in individual languages **The**

Categorization of Spatial Entities in Language and Cognition Michel Aurnague, Maya Hickmann, Laure Vieu, 2007-01-01 Despite a growing interest for space in language most research has focused on spatial markers specifying the static or dynamic relationships among entities verbs prepositions postpositions case markings Little attention has been paid to the very properties of spatial entities their status in linguistic descriptions and their implications for spatial cognition and its development in children This topic is at the center of this book that opens a new field by sketching some major theoretical and methodological directions for future research on spatial entities Brought together linguistic descriptions of spatial systems formal accounts of linguistic data and experimental findings from psycholinguistic studies all couched within a wide cross linguistic perspective Such an interdisciplinary approach provides a rich overview of the many questions that remain unanswered in relation to spatial entities while also throwing a new light on previous research focusing on related topics concerning space and or the relation between language and cognition what do we really know about nominal

classification systems? , Nominal Classification Marcin Kilarski, 2013-12-18 This book offers the first comprehensive survey of the study of gender and classifiers throughout the history of Western linguistics Based on an analysis of over 200 genetically and typologically diverse languages the author shows that these seemingly arbitrary and redundant categories play in fact a central role in the lexicon grammar and the organization of discourse As a result the often contradictory approaches to their functionality and semantic motivation encapsulate the evolving conceptions of such issues as cognitive and cultural correlates of linguistic structure the diverse functions of grammatical categories linguistic complexity agreement phenomena and the interplay between lexicon and grammar The combination of a typological and historiographic perspective adopted here allows the reader to appreciate the detail and insight of earlier supposedly prescientific accounts in light of the data now available and to examine contemporary discussions in the context of prevailing conceptions in the study of language at different points in its history since antiquity Verb Classification in Australian Languages William B. McGregor, 2013-06-10 This book deals with systems of verb classification in Australian Aboriginal languages with particular focus on languages of the north west It proposes a typology of the systems according to their main formal and semantic characteristics It also makes some proposals concerning the historical origins and grammaticisation of these systems and suggestions regarding the grammatical relations involved In addition an attempt is made to situate the phenomenon of verb classification within the context of related verbal phenomena such as serial verb constructions nominal incorporation and complex predicates **Non-canonical Gender Systems** Sebastian Fedden, Jenny Audring, Greville G. Corbett, 2018 This book explores the boundaries of the category of gender and their theoretical significance within the framework of Canonical Typology International experts analyse a variety of gender systems from a range of typologically diverse languages from across the world from South America to Melanesia and from Central Italy to Northern Australia , **The Oxford Handbook of Cognitive Linguistics** Dirk Geeraerts, Hubert Cuyckens, 2010-06-09 The Oxford Handbook of Cognitive Linguistics presents a comprehensive overview of the main theoretical concepts and descriptive theoretical models of Cognitive Linguistics and covers its various subfields theoretical as well as applied The first twenty chapters give readers the opportunity to acquire a thorough knowledge of the fundamental analytic concepts and descriptive models of Cognitive Linguistics and their background The book starts with a set of chapters discussing different conceptual phenomena that are recognized as key concepts in Cognitive Linguistics prototypicality metaphor metonymy embodiment perspectivization mental spaces etc A second set of chapters deals with Cognitive Grammar Construction Grammar and Word Grammar which each in their own way bring together the basic concepts into a particular theory of grammar and a specific model for the description of grammatical phenomena Special attention is given to the interrelation between Cognitive and Construction Grammar A third set of chapters compares Cognitive Linguistics with other forms of linguistic research functional linguistics autonomous linguistics and the history of linguistics thus giving a readers a better grip on the position of Cognitive

Linguistics within the landscape of linguistics at large The remaining chapters apply these basic notions to various more specific linguistic domains illustrating how Cognitive Linguistics deals with the traditional linguistic subdomains phonology morphology lexicon syntax text and discourse and demonstrating how it handles linguistic variation and change Finally they consider its importance in the domain of Applied Linguistics and look at interdisciplinary links with research fields such as philosophy and psychology With a well known cast of contributors from around the world this reference work will be of interest to researchers and advanced students in cognitive linguistics psychology cognitive science and anthropology *a morphosyntactic typology of classifiers* ,
