T And B Lymphocytes:

T and B Lymphocytes: Recognition and Function Fritz Bach, 2012-12-02 T and B Lymphocytes Recognition and Function is the 16th volume of the 1979 ICN UCLA Symposia on Molecular and Cellular Biology This book is organized into seven sections encompassing 74 chapters that summarize molecular level progress in the field of immunobiology It emphasizes cell membrane techniques developed for its analysis and varied products of the major histocompatibility complex as well as other receptors on cells of the immune system The book starts by describing two approaches for molecular association evaluation First is the use of artificial membranes or lipid vesicles for the incorporation of antigens for recognition by T lymphocytes both at the afferent and efferent levels Second is the chemical crosslinking of cell surface components with a variety of different crosslinking reagents This is followed by a discussion on the molecular nature of a T cell receptor that provides insights of the target s recognized by T lymphocytes Several chapters discuss data dealing with the issue of the apparent differential recognition by T and B cells while both use the same VH genes Antiidiotypic sera together with the activity of regulator T cells are also discussed with regard to their role in networks of regulation of the immune response This book presents works demonstrating that human T lymphocytes can also be cloned and both noncytotoxic proliferating T lymphocytes and Tc can be so obtained This is along with the continuing studies regarding heterogeneity of B lymphocytes as well as macrophages Part V focuses on the interaction between lymphocyte and virus and molecular modifications of viral infected cells The subsequent section deals with recognition reactivities and function of T and B lymphocytes Considerable chapters in this section discuss T cell cytotoxicity dichotomy of MHC control over anti H Y cytotoxic T cell responses mouse alloantibodies and mixed lymphocyte reactions The concluding part describes immunological tools such as synthetic membranes and cloned T cells with biological function

T and B Lymphocytes
Melvyn F. Greaves, John J. T. Owen, Martin C. Raff, 1974

Lymphocyte Differentiation, Recognition, and Regulation
David H. Katz, 2014-06-28 Lymphocyte Differentiation Recognition and Regulation provides an overview of the state of knowledge on cellular immunology The focus is on animal work than on studies in man although in certain areas human lymphocyte biology has been discussed in some detail The book attempts to integrate information from diverse areas of cellular immunology immunogenetics and immunochemistry to form some cohesive concepts that can be perhaps utilized as a working foundation for students and investigators in various areas of immunology The book begins with a general description of some of techniques and principles underlying the systems frequently employed in cellular immunology This is followed by detailed analyses of lymphocyte differentiation receptor function and regulatory processes The main points that emerge from such analyses are that the immune system is an infinitely complex and finely tuned network of cells receptors and molecules which interact with one another in a genetically controlled manner that is manifested ultimately in the process known as differentiation
