Ta You Wu Festschrift Science Of Matter:

The Ta-you Wu Festschrift: Science of matter The Ta-you Wu Festschrift: Science of matter Shigeji Fujita,1978 **The Ta-You Wu Festschrift** Shigeji Fujita,1978 Jingshin Theoretical Physics Symposium In Honor Of Prof Ta-you Wu Jong-ping Hsu, Leonardo Hsu, 1998-06-30 Prof T Y Wu is not only an eminent physicist with an encyclopedic knowledge but also a motivational teacher and an influential policy maker in science and technology The young Wu was inspired by Prof Y T Yao whose course on modern physics sparked an interest that burned during a long and productive career Among Wu s achievements are 14 books and more than 120 papers covering subjects from atomic and molecular physics to plasmas and gases to atmospheric physics to relativity theory. Even at the age of 90 he remains active publishing papers and lecturing on physics Prof Wu feels grateful that he had the opportunity to educate a group of extremely talented students and in particular to discover T D Lee's remarkable talent Although creative talent is no doubt a product of nature it must also be nurtured Prof Wu has played a crucial role for an entire generation of physicists in China and has won great respect from former students such as C N Yang T D Lee K Huang and countless others Prof Wu s love of physics and his dedication in teaching and research will always be remembered **SCIENCE OF MATTER:** FESTSCHRIFT IN HONOR OF PROFESSOR TA-YOU WU. Shiqeji Fujita,1978 **Symmetry And Modern Physics:** Yang Retirement Symposium Alfred Scharff Goldhaber, R Shrock, John Smith, George Sterman, Peter Van Nieuwenhuizen, William Weisberger, 2003-09-11 C N Yang one of the greatest physicists of the 20th Century was awarded the Nobel Prize in 1957 jointly with T D Lee for their investigation of the relationship parity symmetry between left and right handed states leading to a discovery that astounded the world of physics the nonconservation of parity by elementary particles and their reactions With R L Mills he created the concept of non abelian gauge theories the foundation of the modern description of elementary particles and forces Professor Yang has worked on a wide range of subjects in physics but his abiding interests have been symmetry principles particle physics and statistical mechanics In 1999 a symposium was held at the State University of New York at Stony Brook to mark the retirement of C N Yang as Einstein Professor and Director of the Institute for Theoretical Physics and to celebrate his many achievements A noteworthy selection of the papers presented at the symposium appears in this invaluable volume in honor of Professor Yang Selected Papers (1945-1980) Of Chen Ning Yang (With Commentary) Chen Ning Yang, 2005-08-22 A remarkable personal and professional chronicle by one of today s leading physicists this is a collection of Chen Ning Yang's personally selected papers supplemented by his insightful commentaries Including previously unpublished or hard to find works this volume contains Yang's important papers on statistical physics nuclear forces and particle physics Among them are his seminal work with T D Lee on the nonconservation of parity for which they won the Nobel Prize and his work with R L Mills which led to modern gauge theories with their exciting prospects for the broad unification of field theories The commentaries were written especially for this volume and

provide a fascinating account of Yang's development as a physicist as well as a look at many important physicists of the 20th century They trace the development of Yang's interests and ideas from his graduate school days to the present showing how he worked with his colleagues and how their physics came into being Together the papers and commentaries in this unique collection comprise a powerful personal statement shedding light on both the intellectual development of a great physicist and on the nature of scientific inquiry Selected Papers (1945-1980), with Commentary Chen Ning Yang, 2005 Consists of 73 articles and added items exclusively for this edition Symmetry & Modern Physics Alfred S. Goldhaber, 2003 C N Yang one of the greatest physicists of the 20th Century was awarded the Nobel Prize in 1957 jointly with T D Lee for their investigation of the relationship parity symmetry between left and right handed states leading to a discovery that astounded the world of physics the nonconservation of parity by elementary particles and their reactions With R L Mills he created the concept of non abelian gauge theories the foundation of the modern description of elementary particles and forces Professor Yang has worked on a wide range of subjects in physics but his abiding interests have been symmetry principles particle physics and statistical mechanics In 1999 a symposium was held at the State University of New York at Stony Brook to mark the retirement of C N Yang as Einstein Professor and Director of the Institute for Theoretical Physics and to celebrate his many achievements A noteworthy selection of the papers presented at the symposium appears in this invaluable volume in Conceptual Foundations of Quantum Physics Dipankar Home, 2013-06-29 It may tum out that like honor of Professor Yang certain other phenomena studied by sociologists bouts of interest in the foundations of quantum mechanics tend to come in 60 year cycles It is hardly surprising that in the first decade or so of the subject the conceptual puzzles generated by this strange new way of looking at the world should have generated profound interest not just among professional physicists themselves but also among philosophers and informed laymen but this intense interest was followed by a fallow period in the forties and fifties when the physics establishment by and large took the view that the only puzzles left were the product either of incompetent application of the formalism or of bad philosophy and only a few brave individualists like the late David Bohm dared to suggest that maybe there really was something there after all to worry about As Bell and Nauenberg surveying the scene in 1966 put it The typical physicist feels that these questions 1 have long ago been answered and that he will fully understand how if ever he can spare twenty minutes to think about it But gradually through the sixties and seventies curiosity did revive and the last ten years or so have seen a level of interest in foundational questions and an involvement in them by some of the leading figures of contemporary physics which is probably unparalleled since the earliest days
