

THE IMPORTANCE OF Environmental Management in Mining

The responsible management of natural resources and ecosystems is central to a sustainable future.

The IGF Guidance for Governments, Environmental Management and Mining Governance identifies four key issues to consider in the broader management of the environment in mining.

ISSUE #1: WATER

Effectively and equitably manage the quantity and quality of water resources for all users and the ecosystems they depend on.

Governments must regulate the extraction of valuable water resources at the watershed level and manage water use, water discharges and water quality.

Mining operations use large amounts of water to:

- Process ore
- Supply large quantities
- Dust suppression
- Transport slurry

ISSUE #2: MINE WASTE

Ensure the long-term physical and chemical stability of all mine waste, including:

- Waste rock
- Tailings and related facilities
- Spent heap leach pads and facilities
- Sludges and precipitates from water treatment in minerals processing
- Dust

Waste systems and facilities must be engineered to eliminate the risk of failure and minimize the risk and exposure to people, land, agriculture, vegetation, and animals.

ISSUE #3: EMERGENCY PREPAREDNESS & RESPONSE

Ensure that all stakeholders are well prepared to prevent, address, respond to and recover from emergencies.

National governments must ensure that all potentially affected stakeholders identify and understand potential risks across the mine life cycle, and that they are well prepared to address and respond to them. Emergency preparedness and response programs should include:

- Risk assessment
- Preparedness and prevention plans
- Response plans
- Recovery plans
- Crisis communications plans

ISSUE #4: BIODIVERSITY

Protect biodiversity, ecosystems and the services they provide.

Mining projects can have direct and indirect impacts on biodiversity and ecosystem services, including:

- Habitat loss
- Ecosystem fragmentation and degradation
- Water, air, soil and noise pollution
- Human population growth
- Increased hunting, fishing, gathering and land clearance for agriculture
- Unintentional introduction of invasive species

National governments should enact policies that follow the mitigation hierarchy to avoid and minimize these impacts.

The manual in simple English aims at to attract attention of one and all concerned with the management of mining environment. The manual will be useful to the following categories of the people in the mining complexes in the Country and Abroad: Mine planners in planning and designing of the mining activities and integration of environmental management measures in the mining methods; Mine operators in implementing the environmental management measures; monitoring and compliance of legislation; Regulatory agencies and their executives in developing a better understanding of the mining environment related aspects and implementing the legislation; Research workers in planning, designing and undertaking research and development activities; Educationists in imparting the knowledge and know how to the participants in various academic and human resource development programs; The Non Governmental Organizations (NGOs) in developing a better understanding of the mining environment and assisting the mineral industry in effective implementation of the environmental management efforts; The people in the mining complexes in developing the understanding of various aspects of the management of mining environment. In addition, the Manual will be an important addition to the knowledge base in the libraries of all the institutions and organizations associated with mining and environmental management. The user is advised to read the Manual carefully and understand the various topics discussed and then use their own wisdom and the suggestions made in the Manual in design, planning, implementation and monitoring of the mining activities. The legislative aspect of mining environmental management is dynamic and time to time changes are made in the Acts, Rules and Regulations by the Central and State Governments. The user is therefore advised to get abreast with the latest developments through the web sites of the MOEF and the Central and State Pollution Control Boards and other regulatory agencies e.g. DGMS, IBM etc.

Tailings and Mine Waste 2001 A. A. Balkema Publishers, 2002-01-26. These papers focus on mine and mill tailings and mine waste. The work also contains information on subjects related to regulations, technical capacities and developments. This guide identifies the current and future issues facing the mining and environmental concerns. **Mine Wastes** Bernd Lottermoser, 2013-04-18. This book is not designed to be an exhaustive work on mine wastes. It aims to serve undergraduate students who wish to gain an overview and an understanding of wastes produced in the mineral industry. An introductory textbook addressing the science of such wastes is not available to students despite the importance of the mineral industry as a resource wealth and job provider. Also, the growing importance of the topics: mine wastes, mine site pollution and mine site rehabilitation in universities, research organizations and industry requires a textbook suitable for undergraduate students. Until recently, undergraduate earth science courses tended to follow rather classical lines focused on the teaching of palaeontology, crystallography, mineralogy, petrology, stratigraphy, sedimentology, structural geology and ore deposit geology.

However to day and in the future earth science teachers and students also need to be familiar with other subject areas In particular earth science curriculums need to address land and water degradation as well as rehabilitation issues These topics are becoming more important to society and an increasing number of earth science students are pursuing career paths in this sector Mine site rehabilitation and mine waste science are exam ples of newly emerging disciplines This book has arisen out of teaching mine waste science to undergraduate and gradu ate science students and the frustration at having no appropriate text which documents the scientific fundamentals of such wastes

Surface Mining Operations in Oil Sands C. A. Poveda,M. G. Lipsett,2014-07-23 The creation of the World Commission on Environment and Development WCED commonly known as the Brundtland Commission and the publication in 1987 of its report Our Common Future marked a turning point towards finding the balance among society economy and environment Since then governments have improved regulations new standards have been developed management and process practices have addressed potential gaps public and private organisations have taken initiative through the creation of committees and programs and research covering all areas of sustainable development has become a priority for academics and practitioners These different sources serve as the basis for a pre selection process of sustainable development indicators SDIs While some sources do not specifically address certain industries the pre selection process suggested in this book studies and analyses each SDI s resource and the possible applicability of already identified indicators An assertive set of SDIs is not solely based on regulatory systems as measuring sustainability cannot become a bureaucratic process and neither can any other SDI s source single handedly determine or mandate the final set of indicators as the real objective is to assist decision makers and effectively engage stakeholders This book presents an analysis of six different sources for pre selecting SDIs accompanied by a methodology to then finalise with a set of SDIs for the surface mining operations in oil sands projects Surface mining projects are complex operations with several social economic environmental and health impacts As the government and oil sands developers are turning towards increasing productivity with a more conscious sustainable development approach a pre selection of SDIs is required to assist further formal multi criteria selection processes
